**Subject: Chino Basin Recycled Water Groundwater Recharge Program  
Quarterly Monitoring Report for October through December 2008**

Dear Mr. Thibeault,

Inland Empire Utilities Agency and Chino Basin Watermaster hereby submit the *Quarterly Monitoring Report* for the fourth quarter of 2008 (4Q08), October 1 through December 31, 2008, for the *Recycled Water Groundwater Recharge Program*. This document is submitted pursuant to requirements in Order No. R8-2007-0039. All required monitoring and reporting for the quarter are presented in the attached report.

During 4Q08, the Groundwater Recharge Program was in compliance with all monitoring and reporting requirements as specified in the Order, with the exception of Odor. Odor does not have a primary maximum contaminant level (MCL); instead it has a secondary MCL, which is a non-enforceable guideline regulating constituents that may cause cosmetic or aesthetic effects in drinking water. Odor is discussed in further detail in the report text.

Chino Basin Watermaster hereby certifies that, during the period of October 1 through December 31, 2008, there was no reported pumping for drinking water purposes in the buffer zones extending 500 feet laterally and 6 months underground travel time of the recharge sites using recycled water, namely Banana, Brooks, Ely, Hickory, 7<sup>th</sup> & 8<sup>th</sup> Street, and Turner Basins. In point of fact, there are no production wells in the buffer zones of the aforementioned recharge sites.

#### DECLARATION

*I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments thereto; and that, based on my inquiry of the individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.*

Executed on the 12<sup>th</sup> day of February 2009 in the Cities of Chino and Rancho Cucamonga.

# Chino Basin Recycled Water Groundwater Recharge Program

## Quarterly Monitoring Report October 1 through December 31, 2008

*Prepared by:*

February 15, 2009

## Table of Contents

<b>1. Introduction .....</b>	<b>1</b>
<i>A. Order No. R8-2007-0039 .....</i>	<i>1</i>
<i>B. Outline of the Quarterly Report .....</i>	<i>1</i>
<b>2. Monitoring Results.....</b>	<b>1</b>
<i>A. Recycled Water: RP-1 and RP-4 .....</i>	<i>1</i>
<i>B. Recycled Water: Basin and Lysimeter Samples .....</i>	<i>2</i>
<i>C. Diluent Water .....</i>	<i>3</i>
<i>D. Groundwater Monitoring Wells .....</i>	<i>3</i>
<b>3. Recharge Operations .....</b>	<b>3</b>
<b>4. Operational Problems &amp; Preventive or Corrective Actions .....</b>	<b>3</b>
<b>5. Certification of Non-Pumping in the Buffer Zones .....</b>	<b>3</b>
<b>6. MVWD ASR Project .....</b>	<b>4</b>
<b>7. WaterReuse Study .....</b>	<b>4</b>

### LIST OF TABLES

2-1	Recycled Water Monitoring: RP-1 & RP-4 Effluent Water Quality (Recycled Water Quality Specifications A.5, A.7, A.8, & A.9)
2-2	Recycled Water Monitoring: Agency-Wide Flow-Weighted TIN & TDS (Recycled Water Quality Specifications A.6)
2-3	Recycled Water Monitoring: Recycled Water Quality Specifications A.1, A.2, A.3, & A.15
2-4	Recycled Water Monitoring: Table II. Remaining Priority Pollutants, EDCs & Pharmaceuticals, and Unregulated Chemicals (Monitoring & Reporting Program)
2-5	Lysimeter and Surface Water Monitoring: TOC, Nitrogen Species, and EC
2-6	Diluent Water Monitoring Results
2-7	Summary of Wells in Groundwater Monitoring Networks
2-8	Groundwater Monitoring Results
3-1	Diluent & Recycled Water Recharge Volumes
7-1	WaterReuse Study Results

### LIST OF FIGURES

1-1	Basin Locations
2-1	Monitoring Well Network: Hickory and Banana Basins
2-2	Monitoring Well Network: Turner Basin
2-3	Monitoring Well Network: 7th & 8th Street Basins
2-4	Monitoring Well Network: Ely Basin
2-5	Monitoring Well Network: Brooks Basin

## 1. Introduction

Inland Empire Utilities Agency (IEUA), Chino Basin Watermaster (Watermaster), Chino Basin Water Conservation District, and San Bernardino County Flood Control District are partners in the implementation of the Chino Basin Recycled Water Groundwater Recharge Program. This is a comprehensive water supply program to enhance water supply reliability and improve the groundwater quality in local drinking water wells throughout the Chino Groundwater Basin by increasing the recharge of stormwater, imported water and recycled water. This program is an integral part of Watermaster's Optimum Basin Management Plan (OBMP).

### A. Order No. R8-2007-0039

On June 29, 2007, the Santa Ana Regional Water Quality Control Board (Regional Board) adopted Order No. R8-2007-0039 which prescribes the requirements for recycled water use for groundwater recharge in 13 recharge sites within the Chino North Management Zone. Chino Basin Groundwater Recharge Program Basins are presented in Figure 1-1. As a provision of this Order, IEUA and Watermaster must also comply with Monitoring and Reporting Program No. R8-2007-0039 (M&RP).

The M&RP includes the water quality monitoring requirements of the Chino Basin Recycled Water Groundwater Recharge Program and the requirement for the submittal of quarterly and annual reports. This document is the quarterly report for the Fourth Quarter of 2008 (4Q08).

The quarterly report includes the following elements as prescribed in the M&RP:

- Monitoring results for recycled water (including lysimeter monitoring), diluent water, and groundwater.
- Recycled water and diluent water volumes recharged at each basin.
- Reporting of any non-compliance events due to water quality, including records of any operational problems, plant upset and equipment breakdowns or malfunctions, and any diversion(s) of off-specification recycled water and the location(s) of final disposal. All corrective or preventive action(s) taken.
- Certification that no groundwater has been pumped from the zone that extends 500 feet and 6-months underground travel time from the recharge basin(s) where recycled water is applied for domestic water supply use.

### B. Outline of the Quarterly Report

Section 2 of this quarterly report discusses the water quality monitoring results for recycled water recharge (water recycling plant effluent, distribution system, basin surface water, and lysimeter data), diluent water, and groundwater. Section 3 provides an overview of recharge operations including the volume of diluent water and recycled water recharged. Section 4 describes any operational problems and preventive and/or corrective actions taken. Section 5 contains the certification of non-pumping in the 500-foot buffer zones around each basin. Finally, Section 6 includes WateReuse Foundation (WRF) research study sampling results.

## 2. Monitoring Results

### A. Recycled Water: RP-1 and RP-4

The requirements for recycled water monitoring are presented in the M&RP. Tables 2-1 through 2-4 include all of the requisite 4Q08 data.

---

---

Recycled Water Specifications A.5 through A.9 are narrative limits in the permit and corresponding monitoring data are presented in Tables 2-1 and 2-2. None of these limits were exceeded in 4Q08.

In the Order, compliance for constituents with maximum contaminant levels (MCLs) and secondary MCLs are based on 4-quarter running averages. These constituents are listed in Recycled Water Specifications A.1 through A.3 (Tables I, II, and III in the Order). The 4-quarter running average concentration data for 1Q08 through 4Q08 are summarized in Table 2-3. The table includes the 4-quarter running average for each parameter and the corresponding limits for compliance. Of the Recycled Water Quality Specifications with limitations, only Oil & Grease does not require the 4-quarter running averages for compliance determination. Maximum contaminant levels for inorganic chemicals, organic chemicals, radionuclides, and disinfection byproducts; and action levels for lead and copper; and secondary MCLs were not exceeded during 4Q08, with the exception of odor.

The threshold-odor secondary MCL of 3 units was exceeded by a 4-quarter running average value of 4 units. This is based on the most recent four quarters of analysis; odor analysis was not run during 4Q08, as it has an annual monitoring requirement. Diluent water sampling for 4Q08 indicated that diluent water samples resulted in odor values ranging from 3 to 67 units.

Due to the volume of sample required for analyses, IEUA has selected, and CDPH has approved, a recycled water sampling point along the distribution pipeline. IEUA selected the turnout to Reliant Energy (an IEUA recycled water customer) to be representative of the system blend of recycled water used for recharge. Although this sampling location is suitable for most constituents, it is not appropriate for disinfection byproducts (DBP), more specifically, Trihalomethanes (TTHMs) and Total Haloacetic Acids (HAA5). For TTHMs and HAA5, samples collected at the basin are more consistent and representative of the recycled water prior to reaching the groundwater table. Compliance is selected at a point prior to the groundwater table and has in previous quarters been selected at a lysimeter actively receiving recycled water recharge during the defined sampling time. For the 4Q08 sampling for DBPs, IEUA chose the 25-foot below ground surface lysimeter at the Brooks Basin as the compliance point, in accordance with Recycled Water Quality Specification A.2.

For constituents with no specified limits, quarterly monitoring data are summarized in Table 2-4.

## **B. Recycled Water: Basin and Lysimeter Samples**

Total organic carbon (TOC) and nitrogen species sampling and analysis are performed weekly during periods when recycled water is delivered to recharge sites. Electrical conductivity is also measured and reported to assist in identifying the presence of recycled water at various depths in the vadose zone. The basin and lysimeter water quality results are summarized in Table 2-5a. The table includes lysimeter data for Brooks and Ely Basins.

The Turner Basin Start-up period report was submitted to RWQCB and CDPH on July 3, 2008 and IEUA has since received verbal authorization to sample in accordance to the alternative monitoring plan recommended in the report. Turner Basin has implemented an alternative monitoring plan that includes pipeline sampling of recycled water and application of a correction factor for Soil-Aquifer Treatment. The correction factors reduce the TOC results by 70 percent for recycled water delivered to cells 1 & 2 and 85 percent for recycled water delivered to cells 3 & 4. The correction factors reduce TN results by 87 percent for recycled water delivered to all four cells. Turner Basin TOC and TN values calculated based on the correction factors provided in the alternative monitoring plan are summarized in Table 2-5b.

During 4Q08, Ely Basin compliance lysimeter sampling continued with an alternative to the failed 15 foot deep lysimeter by sampling both the 5- and 10-foot depths. Sampling of these shallower lysimeters will continue into 1Q09 to develop a SAT correction factor to use in pipeline-based alternative monitoring plan. An alternative monitoring plan will be proposed in the 2008 Annual Report.

---

During 3Q08, the Brooks Street Basin Start-Up Period which began on August 6, 2008, continued through 4Q08 and should conclude in 1Q09. During 4Q08, a tracer study was initiated at Brooks Basin using both sulfur hexafluoride (SF<sub>6</sub>) and enriched boron. Tracer test sampling will continue into 2009.

### **C. Diluent Water**

For 4Q08, diluent water sampling of local runoff was conducted in the West Cucamonga Creek at 8<sup>th</sup> Street and the 8<sup>th</sup> Street storm drain. Diluent water sampling of stormwater was conducted in the San Antonio Channel at the College Heights inlet, Cucamonga Creek at Turner 1, West Cucamonga Creek at Ely 1, and Day Creek at Lower Day. State Water Project water was not delivered to any basins during the monitoring period. Table 2-6a & 2-6b lists the results of the local runoff and stormwater sampling and analyses, respectively. Details on the methods used to measure daily diluent water flow can be found in the CDPH-approved Diluent Water Monitoring Plan.

### **D. Groundwater Monitoring Wells**

During 4Q08, groundwater quality within the vicinity of Banana and Hickory Basins was monitored by sampling a network of six wells. The groundwater quality within the vicinity of the Turner Basins was monitored by sampling a network of six wells. The groundwater quality within the vicinity of the 7<sup>th</sup> & 8<sup>th</sup> Street Basins is monitored by sampling a network of five wells. The groundwater quality within the vicinity of the Ely Basin was monitored by sampling a network of three wells. The groundwater quality within the vicinity of the Brooks Basin was monitored by sampling a network of four wells. The wells in the monitoring well networks for Hickory and Banana Basins, Turner Basin, 7<sup>th</sup> & 8<sup>th</sup> Street Basins, Ely, and Brooks Basins are summarized in Table 2-7, and presented on Figures 2-1 through 2-5, respectively.

The groundwater constituents analyzed from the monitoring wells during 4Q08 are presented in Table 2-8.

## **3. Recharge Operations**

IEUA's Groundwater Recharge Coordinator recorded the daily volumes of water routed to all basins. The Brooks, Ely, and Turner Basins were the only recharge basins to receive recycled water this quarter. Hickory Basin was used for a construction staging site during the 4Q08 and did not receive any recycled water recharge and minimal diluent water recharge. No imported water was delivered to any of the aforementioned recharge basins during 4Q08. Table 3-1 lists the volumes of diluent water, recycled water, and/or local runoff and stormwater captured during 4Q08 at the basins that have initiated recharge using recycled water.

## **4. Operational Problems & Preventive or Corrective Actions**

No operational problems were encountered this quarter, therefore no corrective actions were necessary for the following: Regional Plants RP-1 & RP-4, recharge operations, and monitoring well sampling.

On December 24, 2008, a diesel spill and resultant fire occurred in the San Sevaine Channel upstream of Hickory Basin. In response to the spill, IEUA staff ensured that the Hickory inlet was closed and the rubber dam was inflated. Diesel and fire-fighting foam was cleaned up by the San Bernardino County Office of Emergency Services.

## **5. Certification of Non-Pumping in the Buffer Zones**

Watermaster has certified that there was no reported pumping of groundwater in 4Q08 for domestic or municipal use from the zones that extend 500 feet and 6 months underground travel time from the Hickory, Banana, Turner 7<sup>th</sup> & 8<sup>th</sup> Street, Brooks, and Ely Basins. In fact, there are no production wells

---

within the buffer zones of these aforementioned recharge sites. In the cover letter of this report, Watermaster certifies non-pumping in the buffer zones.

IEUA continues to work with the San Bernardino County Department of Environmental Health Services (SBCDEHS) to prevent the drilling and construction of new drinking water wells within the buffer zones. SBCDEHS has initiated control over production well permitting within the buffer zones of all recharge sites through the use of buffer zone maps that utilize the same land coordinate system (Township/Range/Section/40-acre Parcel) that is used in the permitting process. SBCDEHS reviews new well permit applications in part by checking the proposed location of a new drinking water well against a list of 40-acre parcels that abut recharge basins and their 500-foot buffers. IEUA has provided SBCDEHS with a list of parcels abutting each recharge basin and a series of maps showing the recharge basins, buffers, and township/range/section parcels adjacent the basins and buffers.

If a well falls within an abutting parcel, SBCDEHS will review the proposed well location using maps of the basins and buffers. If the well falls too near the buffer boundary for SBCDEHS to determine the relationship of the proposed well location to the buffer boundary, SBCDEHS will defer to IEUA for a prompt field review of the proposed well location. The field review may include contacting and having the well applicant to identify the exact location of the proposed well casing. To conduct a detailed field review, SBCDEHS will contact and provide IEUA Groundwater Recharge Coordinator with a copy of the well permit application and a timeline for the completion of IEUA's review. Following the review, IEUA will notify SBCDEHS of its findings in writing. IEUA will also notify the California Department of Public Health and the Regional Board of well permit applications that it recommends be declined due to well locations that are determined to fall within a 500-foot buffer. SBCDEHS has initiated control over production well permitting within the buffer zones of all Phase I and Phase II basins through the use of buffer zone maps that utilize the same land coordinate system (Township/Range/Section) that is used in the permitting process.

## 6. MVWD ASR Project

The Regional Board has allowed the Monte Vista Water District (MVWD) Aquifer Storage and Recovery (ASR) project to be included under IEUA/CBWM Phase I Groundwater Recharge Order No. R8-2005-0033 and subsequent permit updates. In April 2007, MVWD, Watermaster, and IEUA entered into an agreement to report the MVWD ASR project groundwater injection/recovery volumes and TIN/TDS mass balance in the recharge program quarterly reports. The Regional Board has been apprised of this agreement and that IEUA will be reporting MVWD ASR project data on a quarterly basis. Initial injection began in June 2007. Effective May 1, 2008, MVWD discontinued groundwater injection at the ASR Wells until further notice.

## 7. WaterReuse Study

IEUA is participating in WaterReuse Foundation research study WR-06-018, which includes periodic testing of San Antonio Water Company (SAWCO) Well No. 12, 8<sup>th</sup> Street Basin 1/1, and 8<sup>th</sup> Street Basin 2/1. The purge water from the well sampling is delivered to Ely Basin. The Regional Board has allowed the test discharges to be covered under IEUA's Groundwater Recharge Permit (Order No. R8-2007-0039) rather than the General De Minimus Discharge permit (NPDES No. CAG998001, Order No. R8-2006-0004). Therefore, the well discharge will not be sampled for constituents beyond those identified in the WRF study, and the discharge quantities will be reported in the groundwater recharge quarterly reports.

During 4Q08, Brooks Basin 1/1 was sampled on November 19, 2008 and December 18, 2008; Brooks Basin 1/2 was sampled on November 19, 2008; and 8<sup>th</sup> Street Basin 2/1 was sampled on December 18, 2008. Laboratory results for the four sampling/discharge events are included in Table 7-1.

Table 2-1a  
 Recycled Water Monitoring: RP-1 & RP-4 Effluent Water Quality for October 2008

Note: Turbidity and coliform must meet water quality standards for disinfected tertiary treated recycled water, as specified in NPDES No. CA0105279, Order No. R8-2006-0010.

TDS and TIN limits are based on a 12-month running average values which are presented in Table 2-2

**Bolded characters signify an exceedance of a permit limitation**

Blank cells indicate that analysis was not run for a constituent on that particular date. The data presented meets/exceeds the frequency of analysis specified under the discharge permit for these facilities.

\*TN compliance can be met at a point prior to the regional groundwater, including lysimeters.

\*\*RP-4 Effluent EC values from IEUA lab data, not continuous monitoring data

	<1	<1	<1	<1	<1	60	µg/L	S6251B

NA: Not Analyzed this quarter

<sup>1</sup> 4-quarter running average is calculated based on ND values equal to half the detection limit. The reported 4-quarter running average value, if less than DL, will be based on highest DL found in the data set.

<sup>2</sup> The sum of m,p-Xylene and o-Xylene is used to calculate compliance for the Total Xylenes limit

<sup>3</sup> 4-quarter running average is calculated based on the four most recent results. Monitoring is required annually. However, if monitoring takes place more frequently than required, those results will be reported.

<sup>4</sup> Oil & Grease compliance determination not based on 4-quarter running average

**Bold signifies an exceedance of a limit in the Order. Explained in further detail in the report text.**

*Italic signifies that the 4-quarter running average highest DL is greater than the MCL; all values in data set are non-detect.*

Ely Basin	601003	Ely Basin MW-1, Philadelphia Well (Casing 3)	100 downgradient	280 - 300	2	NA	Monitoring
	601004	Ely Basin MW-2, Walnut Well (Casing 2)	3050 downgradient	290 - 310	4	NA	Monitoring
	3600975	Riverside Drive Well (43840-CWW)	6046 downgradient	NA	NA	Active	Private Irrigation
	600134	Bishop Of San Bernardino Corp. - DOM	6500 downgradient	NA	NA	Active	Private Domestic

Notes:

NA = Data not available

CBWM ID = Chino Basin Water Master well identification number

bgs = below ground surface

\* = Ontario Well No. 38 has taken the place of Ontario Well No. 19, which is inactive

**Explanation**

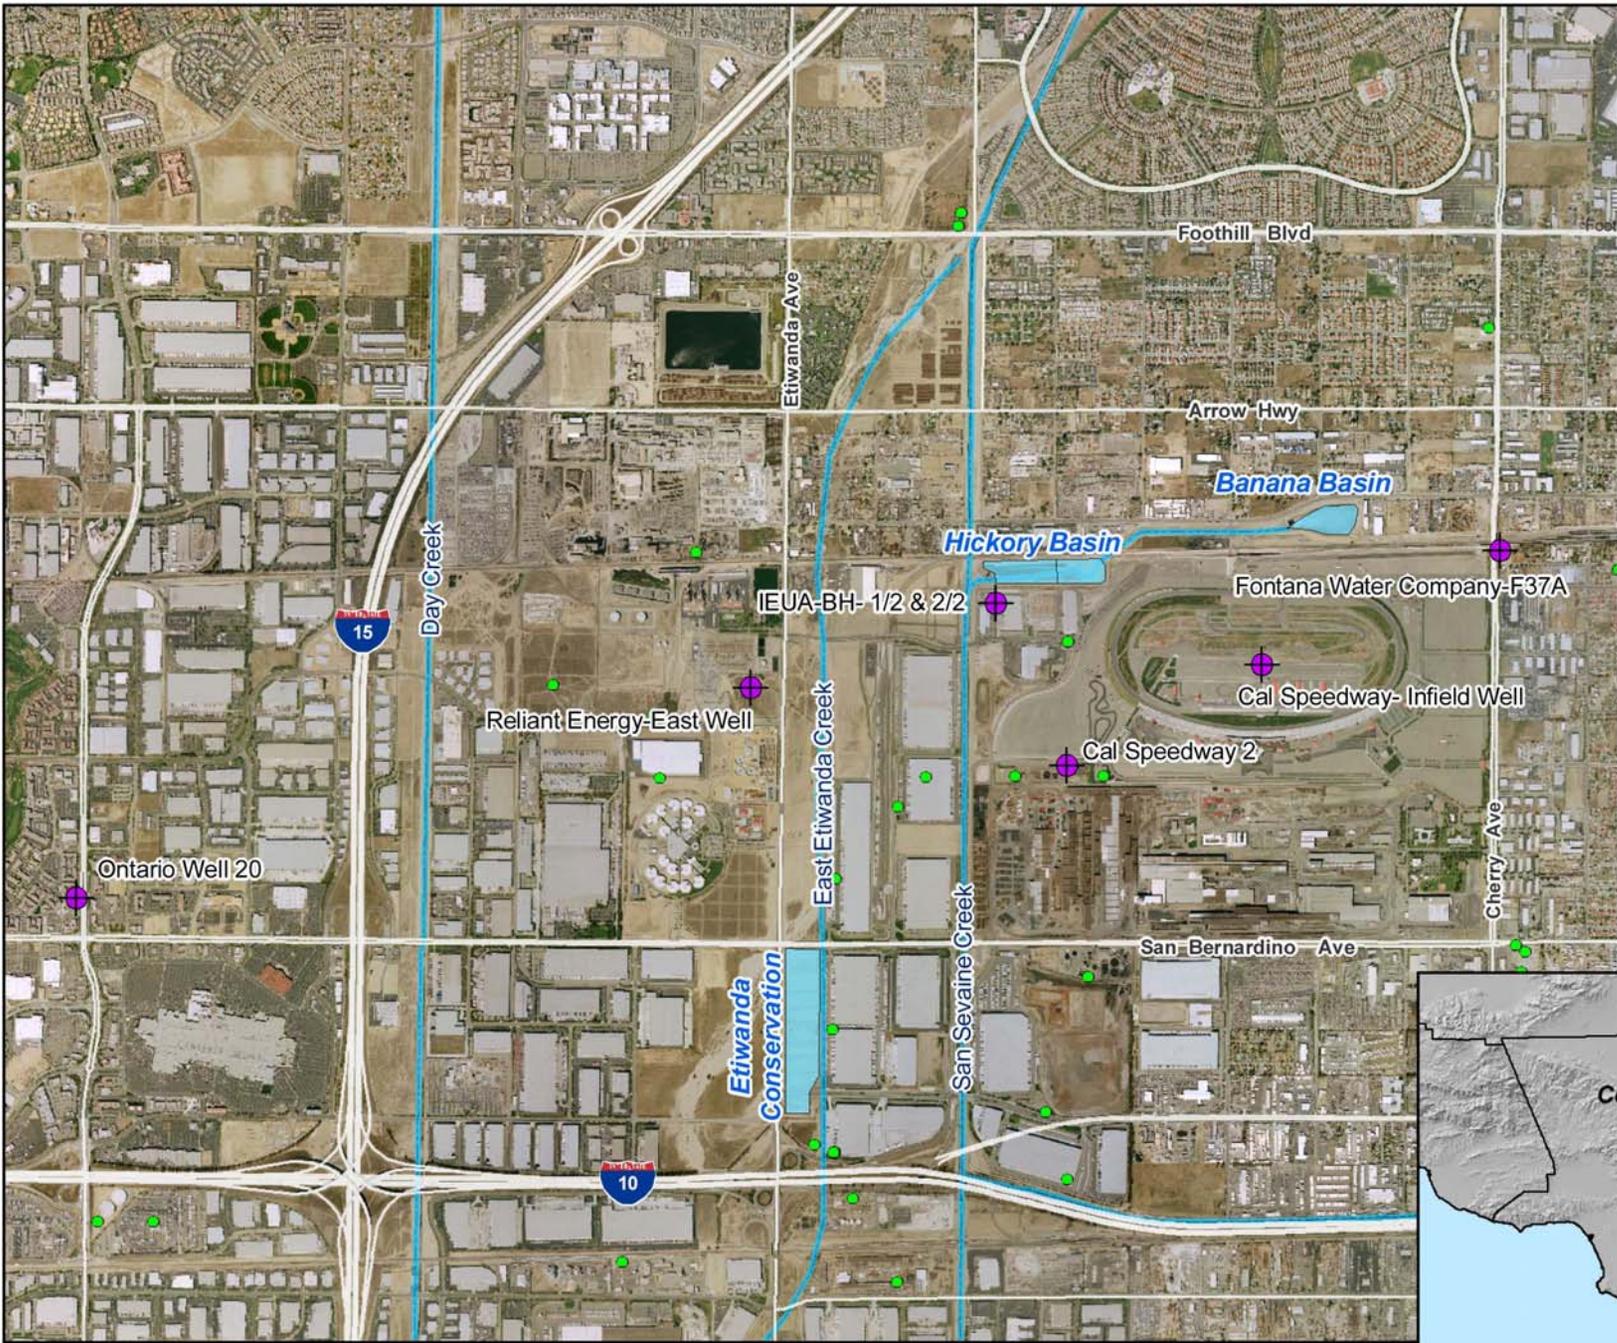

-  Recharge Basins in the Recycled Water Groundwater Recharge Program
-  Non-program basins
-  Rivers and Streams

**Chino Basin Recycled Water Groundwater Recharge Program**  
 Basin Locations

**Figure 1-1**

**Main Map Features**

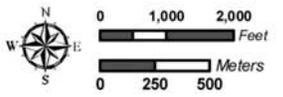

-  Existing Monitoring Well
-  "Other Wells"
-  Rivers/Streams/Creeks
-  Recharge Basins

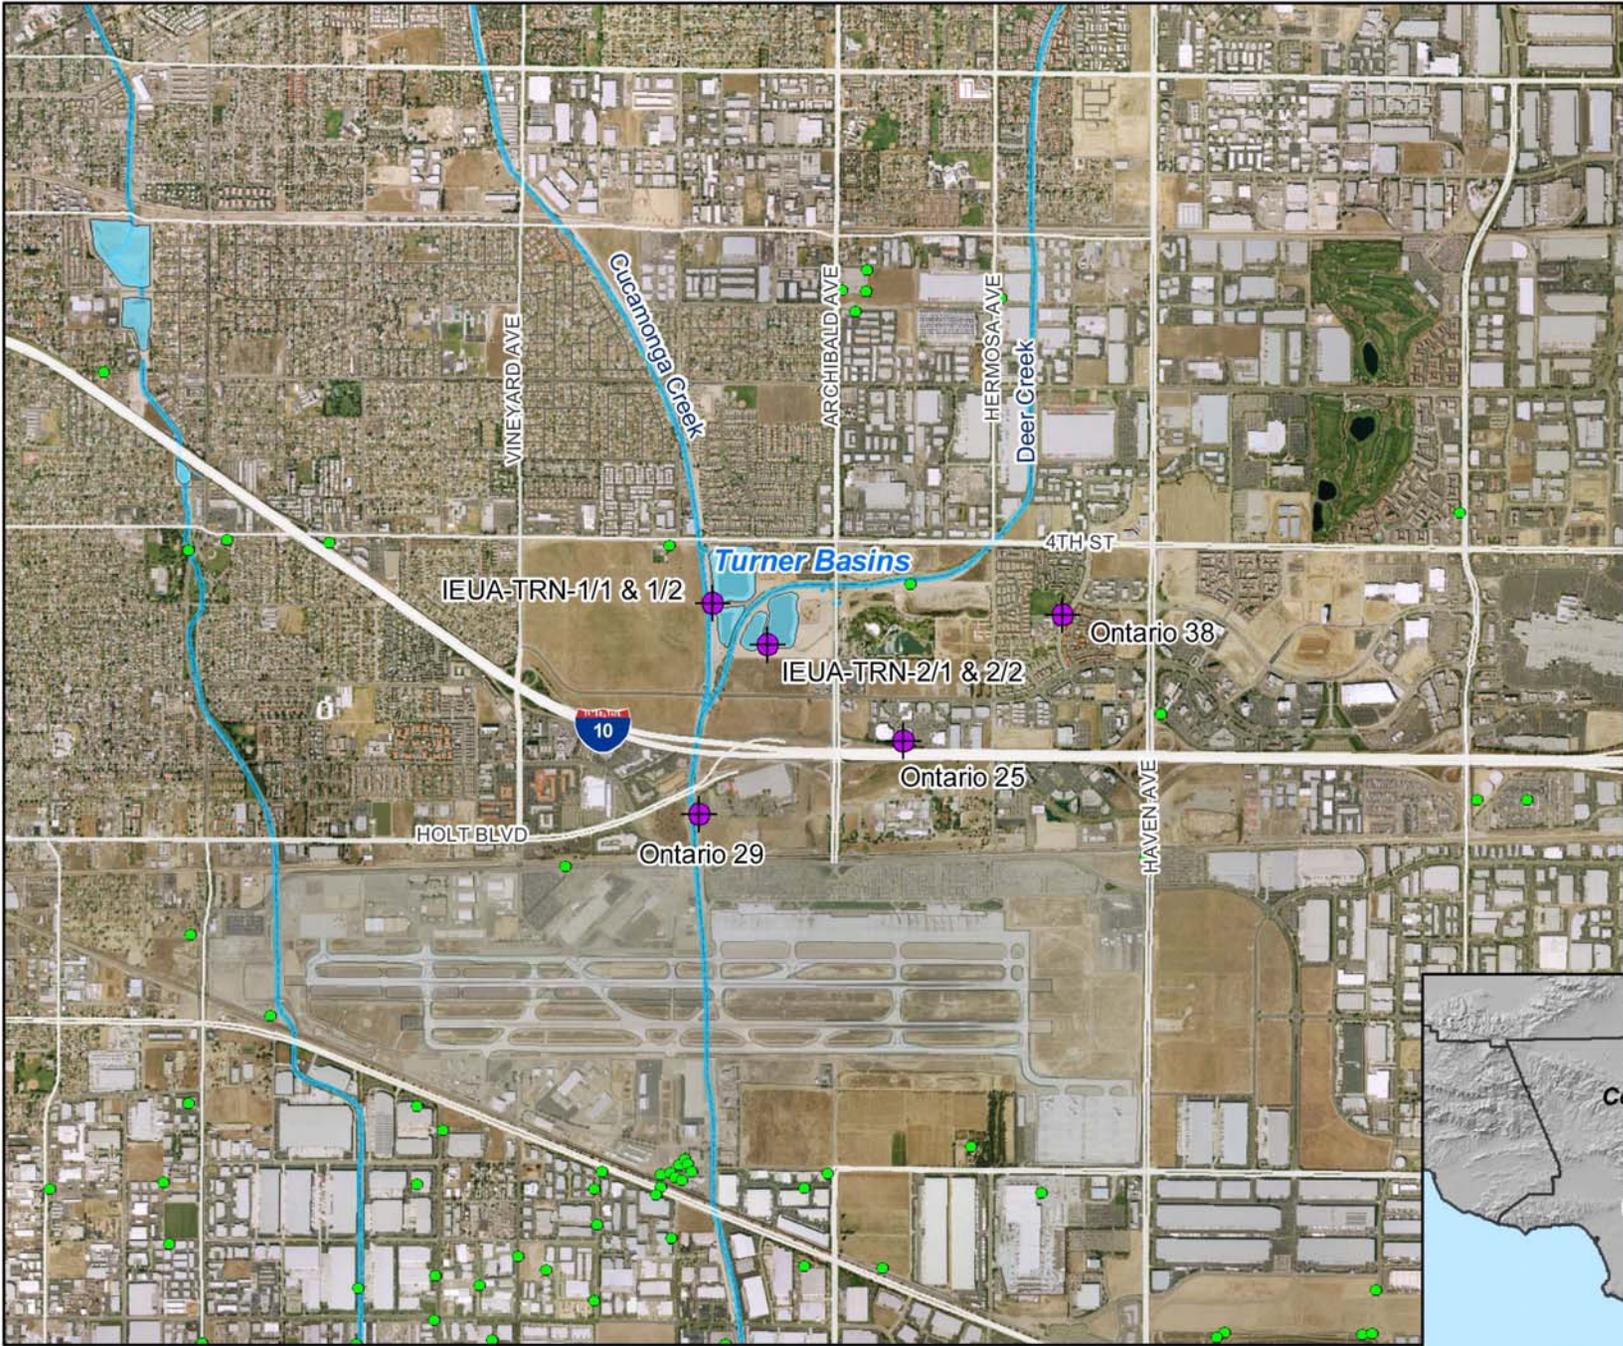

**Monitoring Well Network**  
Hickory and Banana Basins
