Eucalyptus Trail Loop to Temporarily Close Through February 2014

Inland Empire, California – As part of the Inland Empire Utilities Agency’s (IEUA) goals to drought-proof the Chino Basin, IEUA is increasing their availability of recycled water in the City of Chino Hills.

The 930 Zone Recycled Water Reservoir and Pipeline projects are currently underway in the cities of Chino Hills and Chino. A portion of the hiking and equestrian trail beginning at Chino Hills Community Park, 3280 Eucalyptus Avenue and ending west of the reservoir construction site is temporarily closed to the public for safety reasons through Friday, February 28, 2014. The contractor is installing 30” diameter pipes. At project completion, this pipeline will provide recycled water from IEUA’s Carbon Canyon Regional Water Recycling Plant on Chino Hills Parkway in Chino.

These recycled water projects will provide an additional water source for irrigation and funding for these projects is provided by the California State Water Resources Control Board and the Environmental Protection Agency. For additional information, please contact Michelle O’Brien at 909-993-1501 or mobrien@ieua.org.

The Inland Empire Utilities Agency covers 242-square miles, distributes imported water, provides industrial/municipal wastewater collection and treatment services, and other related utility services to more than 850,000 people. The Agency's service area includes the Cities of Chino, Chino Hills, Fontana, Montclair, Ontario and Upland, as well as the Cucamonga Valley Water District, Monte Vista Water District, and Fontana Water Company.
