Regional Sewerage Program Policy Committee Meeting

AGENDA
Thursday, May 14, 2015
4:30 p.m.

Location
Inland Empire Utilities Agency
6075 Kimball Avenue
Chino, CA 91710

Thursday, May 14, 2015

Call to Order and Roll Call

Pledge of Allegiance

Public Comment

1. **Technical Committee Report – Ryan Shaw** *(Oral)*

2. **Approval of Minutes**
   A. Minutes of March 5, 2015 Meeting and Minutes of April 1, 2015 Special Joint IEUA Board and Regional Policy Committee Meeting

3. **Action Items**
   A. Regional Wastewater and Recycled Water Programs Proposed Biennial Budget for Fiscal Years 2015/16 and 2016/17 and Proposed Rates/Fees for Fiscal Years 2015/16 – 2019/20 (Written/PowerPoint)

4. **Informational Items**
   A. Regional Drought Update (PowerPoint)
   B. Financial Update (Written/PowerPoint)

5. **Receive and File**
   A. Building Activity Report (YTD)
   B. Recycled Water Operations Summary
   C. Commercial, Industrial, Institutional (CII) Turf Rebate Update
   D. Water and Wastewater Connection Fee Study (Final)

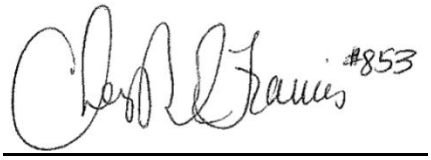
6. **Other Business**
   A. IEUA General Manager's Update
   B. Committee Member Requested Agenda Items for Next Meeting
   C. Committee Member Comments

D. Next Meeting – June 4, 2015

7. Adjournment

DECLARATION OF POSTING

I, Cheyanne Reseck-Francis, Acting Executive Assistant of the Inland Empire Utilities Agency, A Municipal Water District, hereby certify that a copy of this agenda has been posted by 5:30 p.m. in the foyer at the Agency's main office, 6075 Kimball Avenue, Building A, Chino, CA on Thursday, May 7, 2015.



Cheyanne Reseck-Francis

APPROVAL OF MINUTES

2A

Inland Empire Utilities Agency
A MUNICIPAL WATER DISTRICT

Regional Sewerage Program
Policy Committee Meeting

MINUTES OF March 5, 2015 MEETING

CALL TO ORDER

A regular meeting of the IEUA/Regional Sewerage Program – Policy Committee was held on Thursday, March 5, 2015, at the Inland Empire Utilities Agency located at 6075 Kimball Avenue, Chino, California. Jim Bowman, City of Ontario, called the meeting to order at 4:30 p.m.

ATTENDANCE

Committee Members:

Peter Rogers	City of Chino Hills
Jesse Sandoval	City of Fontana
Paul Eaton	City of Montclair
Jim Bowman	City of Ontario
Debbie Stone	City of Upland
Kathy Tiegs	Cucamonga Valley Water District
Jasmin Hall (Non-voting)	Inland Empire Utilities Agency

Absent Committee Members:

Earl Elrod	City of Chino
Terry Catlin	Inland Empire Utilities Agency

Others Present:

Carlos Rodriguez	BIA
Gordon Nichols	BIA
Jesus Plasencia	City of Chino
Steve Nix	City of Chino Hills
Mike Hudson	City of Montclair
Nicole deMoet	City of Montclair
Ryan Shaw	City of Ontario
Rosemary Hoerning	City of Upland
John Bosler	Cucamonga Valley Water District
Braden Yu	Cucamonga Valley Water District
Craig Proctor	Inland Empire Utilities Agency
Paula Hooven	Inland Empire Utilities Agency
Alex Lopez	Inland Empire Utilities Agency
Tina Cheng	Inland Empire Utilities Agency
Sylvie Lee	Inland Empire Utilities Agency

Majid Karim	Inland Empire Utilities Agency
Andy Campbell	Inland Empire Utilities Agency
Chris Berch	Inland Empire Utilities Agency
Ernest Yeboah	Inland Empire Utilities Agency
P. Joseph Grindstaff	Inland Empire Utilities Agency
Christina Valencia	Inland Empire Utilities Agency
Kathy Besser	Inland Empire Utilities Agency
Javier Chagoyen-Lazaro	Inland Empire Utilities Agency
Cheyanne Reseck-Francis	Inland Empire Utilities Agency

PLEDGE OF ALLEGIANCE

Committee Member Kathy Tiegs/CVWD led those present in the Pledge of Allegiance.

PUBLIC COMMENTS

None.

1. **TECHNICAL COMMITTEE REPORT**

   Ryan Shaw/City of Ontario provided a brief overview of the Regional Technical Committee meeting that took place last Thursday, February 26, 2015. He stated that the committee voted unanimously to approve only the first two years (2015/16 and 2016/17) of the Proposed Multi-Year EDU Volumetric Rate Adoption for Fiscal Years 2015/16 through 2019/20 and unanimously approved the Fiscal Year 2015/16 through 2024/25 Ten-Year Capital Improvement Plan, as presented.

(Committee Member Eaton entered the meeting room at 4:38 p.m.)

2. **APPROVAL OF MINUTES**

   A. **Minutes of February 4, 2015 Special Joint IEUA Board/Regional Policy Committee Meeting**

   Motion: By Peter Rogers/City of Chino Hills and seconded by Jesse Sandoval/City of Fontana to approve the minutes of the February 4, 2015 Special Joint IEUA Board/Regional Policy Committee meeting.

   Motion carried: Unanimously.

3. **ACTION ITEMS**

   A. **Proposed Multi-Year EDU Volumetric Rate Adoption for Fiscal Years 2015/16-2019/20**

   Christina Valencia/IEUA gave a presentation on the water, recycled water, and monthly volumetric EDU rates. She stated that the City of Fontana is currently going through a Prop 218 process, as will other member agencies, and the EDU rates need to be adopted so they may continue with that process, clarifying that although it is being adopted now, the rates will not be implemented until October 1, 2015. She stated that there have been several cost of service workshops and there will be more scheduled in coming months, in coordination with Carollo's rate study currently underway for the EDU wastewater connection fee, water rates and recycled water rates. Ms. Valencia stated that there is a workshop scheduled for March 10, 2015, a special joint meeting of the IEUA Board and Policy Committee scheduled for April 1,

2015, a final workshop scheduled for April 14, 2015, and adoption is anticipated in May 2015. She mentioned that key rate objectives are legal compliance to ensure nexus between costs and fees, fiscal stability to provide a stable revenue stream to safeguard the Agency's fiscal health, equitable allocation of program costs between current and future ratepayers, and infrastructure and sustainability of regional infrastructure and reliable water supplies. Ms. Valencia stated that by adopting the multi-year rates as proposed, the Agency will achieve full recovery of the cost of service in FY 2018/19, which will reduce reliance on property tax subsidies and allow use of property taxes to support major capital costs in the future. She stated that this will allow future capital requirements, such as the relocation of solids handling at RP-2, decommissioning of RP-2, and rehabilitation of RP-1 to be covered by those property taxes.

Motion: By Paul Eaton/City of Montclair and seconded by Jesse Sandoval/City of Fontana to make recommendation to the IEUA Board of Directors to approve the two-year Equivalent Dwelling Unit (EDU) Volumetric rate for Fiscal Year (FYs) 2015/16 to 2016/17 for the Agency's Regional Wastewater Operations and Maintenance (RO) fund.

Motion carried: Unanimously.

B. **Fiscal Year 2015/16 through 2024/25 Ten-Year Capital Improvement Plan**

Sylvie Lee/IEUA gave a presentation highlighting the key drivers of the FY15/16 TYCIP, budget estimate by fund, funding sources, major projects, and the TYCIP schedule. She stated that the key drivers are member agency growth projections, Wastewater Facilities Master Plan updated flow factors and concentrations, Asset Management Plan, Draft Recycled Water Program Strategy Update, Draft Energy Management Plan, and Draft Integrated Resources Plan local reliability discussions. Ms. Lee reviewed the budget estimates by fund and funding sources, highlighting the total percentage from SRF loans, low-interest pay-as-you-go loans, grants, and outside contributions, totaling $908.1 million for the TYCIP.

Motion: By Jesse Sandoval/City of Fontana and seconded by Kathy Tiegs/CVWD to make recommendation to the IEUA Board of Directors to approve the Fiscal Year (FY) 2015/16-2024/25 Ten-year Capital Improvement Plan (TYCIP).

Motion carried: Unanimously.

4. **INFORMATIONAL ITEMS**

A. **Recycled Water Semi-Annual Update**

Andy Campbell/IEUA gave an overview of the distribution facilities, provided a brief update on the status of recycled water capital projects, and summarized recycled water deliveries overall and by each member agency.

5. **RECEIVE AND FILE ITEMS**

A. **Building Activity Report (YTD)**

The Building Activity Report (YTD) was received and filed by the Committee.

B. **Recycled Water Operations Summary**
The Recycled Water Operations Summary was received and filed by the Committee.

6. **OTHER BUSINESS**

A. **IEUA General Manager's Update**
P. Joseph Grindstaff reported the following:

- TDS levels (effluent) are rising from increased salt in the water. There has been discussion regarding the current regulations and about the possibility of changing the reporting average period to another length of time. The use of water softeners is contributing to the problem as well. Discharging too much salt causes significant issues, the most significant being the reduction of the amount of water discharged into the ground because of the limit of salt. Desalting the water prior to discharging into groundwater will increase costs. Enforcement on water softener removal may aid the situation as well.

- Regarding the drought, it is anticipated that next month MWD will declare an allocation, which will reduce the amount of water supplied to MWD's 26 member agencies and establish strict guidelines for reducing water use. Agencies may be charged a surcharge of two to four times the cost of the normal amount for water.

- With regards to the Bay-Delta Conservation Plan (BDCP), pumping water through the delta "twin tunnels" is to be reevaluated, and possibly require a new plan.

B. **Committee Member Requested Agenda Items for Next Meeting**
None.

C. **Committee Member Comments**
None.

D. **Next Meeting – April 1, 2015 Special Joint IEUA Board/Regional Policy Committee Meeting**

7. **ADJOURNMENT** - Meeting was adjourned at 5:13 p.m.

Jean Cihigoyenetche, Cihigoyenetche Grossberg & Clouse
Marty Cihigoyenetche, Cihigoyenetche Grossberg & Clouse
Earl DeVries, Ontario resident
Robert Grantham, Carollo Engineers, Inc.
Gordon Nichols, BIA
Carlos Rodriguez, BIA
Toby Weissert, Carollo Engineers, Inc.

A Special Workshop was held at the office of the Agency, 6075 Kimball Avenue, Bldg. B., Chino, California on the above date.

President Terry Catlin called the meeting to order at 10:01 a.m. and he led the pledge of allegiance to the flag. A quorum was present.

President Terry Catlin stated that members of the public may address the Board. Ontario resident, Mr. Earl DeVries, and Chief Executive Officer of the BIA Baldy View Chapter (BIA) Mr. Carlos Rodriguez, requested to address the Board.

Mr. Earl DeVries stated that as a taxpayer and resident of the City of Ontario, he has complained to the Ontario City Council for several years regarding IEUA's rate increases being more than the cost of living. He stated that he does not know who gives IEUA advice on economics, but he has not seen a 70 percent increase in local population, new homes, new businesses, new toilets, new schools, or new malls, and he doesn't know of anyone who will get a 70 percent raise in the next five years. He presented a photo of Regional Plant No. 1 (RP-1) that he photographed displaying green grass in the median and water in the parking lot, stating that he noticed that all the public agencies have green grass as his neighbors are doing their part to save water and their lawns are very dead and dirty. He thanked the Board for their time.

Mr. Carlos Rodriguez, representing the BIA, commended IEUA and member agencies on their transparency throughout this process and their commitment to have a sustainable water supply for our ever-growing region. He stated that, as an industry, they are committed to continuing to address future housing needs, and would like to do it in a cutting-edge, sustainable way. He stated that he understands that there are still some technical aspects that need to be discussed further regarding the sewer connection fee and new water connection fee, and that these issues were addressed in a letter from the BIA to IEUA, but in order to be respectful of the time allotted, he will not get into the details of said letter. Mr. Rodriguez stated that, based on previous discussions with staff, these issues will definitely be discussed in the very near future, and that as this process moves forward, there should be consensus on the fee, accuracy, and consideration of implementation on how to increase the fees in an incremental manner. He mentioned, that projects currently amidst the approval process and have an approved final map, resources have already been put forth by the homebuilder, and to see an adjustment of the magnitude that is proposed would be a burden and a difficult challenge for some, if not all, projects. He requested that the BIA have consideration on a limited "grandfather" exemption on

projects that are already in process and consideration on implementation. He stated that this would allow the BIA to be responsive to the housing market dynamics that are still a challenge. He concluded by stating that the BIA is an interested stakeholder, he thanked IEUA for the attention given to the BIA's views, and stated that they look forward to working with IEUA in relation to the comments in the letter regarding the sewer connection fee and also in the future on the water connection fee. He thanked the Board for the opportunity to speak.

President Catlin asked if there were any changes/additions/deletions to the agenda. There were no changes/additions/deletions to the agenda.

RATE BUDGET WORKSHOP FOR FISCAL YEARS 2015/16 THROUGH 2019/20

IEUA Chief Financial Officer/Assistant General Manager Christina Valencia gave a PowerPoint presentation on the proposed multi-year rates for fiscal years 2015/16 through 2019/20, highlighting the key policy principles of fiscal responsibility, stability, and predictability, water reliability, wastewater management, and legal compliance, which are the basis for the proposed rates. Ms. Valencia noted that key connection fee objectives are to meet legal compliance, provide a nexus of costs between existing and future customers, achieve "growth pays for growth", and regional infrastructure sustainability and reliability. She stated that property taxes have been subsidizing the rates, keeping them artificially low, and that IEUA's goal is to have revenue sufficient for covering cost of service within the next four to five years. She stated that the Agency has not completed a rate study of this magnitude to date and that the consultant, Carollo Engineers, has evaluated the allocation of costs to either existing or future ratepayers, the equitable allocation of program costs to member agencies, creating a sustainable rate structure that accounts for future changing conditions, and maintaining a reliable and predictable revenue stream and cost structure. Ms. Valencia noted that potable water rates are still being discussed, so those rates will remain as is for fiscal year 2015/16, as will the pass through rate on the readiness to serve (RTS) charge. She also noted that IEUA is working closely with the Building Industry Association (BIA) and David Toussig & Associates (DTA) to ensure the accuracy of the proposed fees.

IEUA General Manager P. Joseph Grindstaff noted that RP-2 is below the 566 elevation and susceptible to flooding when the dam is raised. He reported that the Agency will have to relocate the RP-2 plant by 2021, including decommissioning, relocation, and restoration to pristine ground, at a cost of approximately $125 million that will be funded by property taxes. He stated that RP-1 will need to be evaluated for expansion once RP-2 is completed. Mr. Grindstaff mentioned that $5 million was borrowed from the wastewater fund to support the recycled water fund and that more infrastructure is needed to support the recycled water program. He stated that initially it was assumed that the service area would require 50,000 acre-feet per year by 2008, and that it has actually only achieved delivery of 30,000 acre-feet per year. He stated that there will be projects completed within the next five years that will increase recharge and allow recycled water to more areas within the service area, specifically the Southern and Western areas, increasing the amount of recycled water stored as groundwater by 70 to 80 percent, which is very beneficial to the area.

Mr. Grindstaff mentioned the Governor of California's Executive Order expected to be released today (April 1), which establishes a state-wide goal for turf removal of 50,000 square feet, and summarized IEUA's conservation programs stating that there are many residential and commercial programs available for turf removal and installation of drought-tolerant landscapes.

IEUA Manager of Planning and Environmental Compliance Sylvie Lee gave a PowerPoint presentation on the recycled water program history and the Agency's goal of making recycled water reliable, widely available throughout the region, and cost-effective, with recycled water customers paying a potential not-to-exceed amount of 70 percent of the Metropolitan Water District (MWD) Tier 1 Untreated rate. She stated that the Agency's goal is to provide 50,000 acre-feet per year while keeping rates affordable, and based on region-wide recycled water

demand projections, member agencies projected utilizing 38,000 acre-feet per year of recycled water, and current direct use is approximately 24,000 acre-feet per year. She stated that recycled water is the most cost-effective way to meet supply needs and provide supply resiliency, noting that there are many projects planned in the next five years and in the future to provide additional connections to ensure local reliability, cost-effectiveness, "growth pays for growth", and to meet regional demands.

Ms. Valencia continued with the presentation highlighting the timeline for future meetings, workshops, and adoption of the rates.

Mr. Grindstaff added that there are policy options such as the use of property tax revenues, at the Board's discretion. He stated that for at least the past two decades, IEUA has dedicated most of that property tax revenue to offsetting O&M costs on the wastewater side, and that if you look at any chart of wastewater rates in the state, the Agency is literally at the bottom end, because we have subsidized those rates with property taxes. He stated that when there is talk about not subsidizing those rates and getting to cost of service, one of the things that is driving it is the anticipation of completing these projects that should be paid for with rates. Mr. Grindstaff stated that moving RP-2 is not a project that we can charge to development, and it is something that Agency would have to charge to ratepayers; and instead of subsidizing wastewater rates, the Agency should switch over and put that money into moving RP-2. The Board could even choose to not subsidize that project, but instead raise wastewater rates and then shift some of that property tax revenue to the recycled water side. He stated that inherent in all of these presentations is, and there has been discussion on, taking property tax away from wastewater and raising rates, causing the Agency to raise the rates on the recycled water side. The assumption that is built into what has been presented is that the Agency continues to put $2 million per year from property tax revenue into the recycled water system, which the Regional Technical Committee, Regional Policy Committee, and IEUA Board agreed to do beginning in fiscal year 2010. So, in these rates, that policy is continued, but the remainder of the property tax revenue will be used to subsidize the O&M costs for wastewater for three more years. This would gradually be phased out and that revenue will be used to pay for the move of RP-2 first and then the rehab of RP-1, totaling approximately $250-$300 million in projected costs.

Regional Policy Committee member Kathy Tiegs (CVWD) thanked the Regional Technical Committee, Regional Policy Committee, and the IEUA Board for their bold leadership, for being receptive about the rates, and for the transparency throughout the process. She stated that she appreciates the Agency hiring a consulting firm to assist with the rate study and for attempting to achieve equitability throughout the region. She mentioned that as times change and there is more growth in the region, development should pay for development, and that if the "one water" charge is not approved, the impact to CVWD is approximately $33 million.

Director Camacho, Director Hall, and President Catlin each thanked Agency staff for their dedication and transparency throughout the process.

President Catlin opened the floor for others in attendance to make comments.

MVWD General Manager Mark Kinsey stated that he has been the General Manager of Monte Vista Water District (MVWD) since 1998, and worked for IEUA from 1981-1982. He stated that MVWD is a retail water provider only; sewer, recycled water, and other services are provided by the City of Montclair. He stated that MVWD supports the "one water" fee, making it so that future users buy into the system and support future growth. He also stated that MVWD supports IEUA being responsible for collecting those fees.

With no further business, the workshop was adjourned at 11:47 p.m.

APPROVED:

ACTION
ITEM

3A

Inland Empire Utilities Agency
A MUNICIPAL WATER DISTRICT

REVISED 4/28/15

Date: April 30/May 14, 2015

To: Regional Committees

From: Inland Empire Utilities Agency

Subject: Regional Wastewater and Recycled Water Programs Proposed Biennial Budget for Fiscal Years 2015/16 and 2016/17 and Proposed Rates/Fees for Fiscal Years 2015/16 – 2019/20

RECOMMENDATION

It is recommended that the Regional Technical and Policy Committees (Regional Committees) review and make a recommendation to the IEUA Board of Directors (Board) to approve the proposed;

1. Fees and Rates for FYs 2015/16 – 2019/20 for the Agency's Regional Wastewater Capital Improvement (RC) fund and Recycled Water (WC) fund, and

2. Biennial budget for Fiscal Years (FYs) 2015/16 and 2016/17 for the Agency's Regional Wastewater Operations and Maintenance (RO) fund, Regional Wastewater Capital Improvement (RC) fund, and Recycled Water (WC) fund.

The new water connection fee is presented as an informational item only, as the Agency plans to levy and collect the fee directly. The Recharge Water (RW) fund budget is also presented as on information item only. Therefore, no recommendation from the Regional Committees is necessary.

BACKGROUND

Since November 2014, the Agency has facilitated numerous workshops with member agencies and stakeholders, including two special joint meetings with the IEUA Board and Regional Policy Committee to review the proposed rates and fees for the Agency's Regional Wastewater and Recycled Water programs. The focus of the review included the Regional Wastewater connection fee and equivalent dwelling unit (EDU) volumetric rate, the Recycled Water rates for both direct and groundwater recharge deliveries and the establishment of a new water connection fee to support development of regional water supplies.

Per the discussion at the February 4, 2015, special joint meeting of the IEUA Board and the Regional Policy Committee, the Regional Wastewater EDU volumetric rate was adopted by the IEUA Board on March 18, 2015, for FYs 2015/16 - 2019/20. Early adoption was requested by the City of Fontana to meet San Bernardino Tax Assessor timeline to add their rates to the property tax roll. The adopted wastewater volumetric rates are summarized on Table 7.

Also included in the review were the potable water rates recorded in the Agency's Water Resources (WW) fund. Per the request of the member agencies, the proposed restructuring of the potable water rates has been deferred to allow for further evaluation and analysis. No changes to the current rates comprised of the AF surcharge and meter charge are proposed for FY 2015/16, as reported on Table A5 in the Appendix. Discussions on the proposed rate restructuring will continue in July with the plan for the IEUA Board to adopt the new rates in October 2015 for FY 2016/17.

Key Objectives
Consistent with the IEUA Business Goals and the IEUA Strategic Plan, some of the key objectives of the proposed rates and fees include:

- ***Fully recover costs*** - adoption of multi-year rates that achieve full cost of service;
- ***Be equitable*** – ensure rates and fees maintain a clear nexus between what a customer pays and the benefit received;
- ***Ensure regional water reliability and sustainability*** - continue development of regional water supplies;
- ***Make "growth pay for growth"*** - increase the regional wastewater connection fee and establish a new water connection fee to support future expansion and improvement of the regional wastewater and water systems;
- ***Eliminate property tax subsidies for operations and maintenance*** – use of property tax receipts to support regional capital investments in water reliability and sustainability;
- ***Provide fiscal stability***- maintain rates and fees that ensure uninterruptible service during times of revenue uncertainty;
- ***Be legally compliant*** – ensure rates and fees are reasonable as mandated by Proposition 26.

Wastewater Connection Fees
The wastewater connection fee supports the acquisition, construction, improvement, and expansion of the Agency's regional wastewater system. The Agency's updated Facilities Master Plan, Asset Management Plan, and Capital Improvement Plans (CIPs) identified capital projects over the next 20 years (through 2035) needed to meet anticipated growth and increased service demand in the region. In order to secure the financial resources needed for the timely execution the major wastewater projects needed to support future growth, Carollo Engineers, Inc. (Carollo) was commissioned to conduct a rate analysis of IEUA's regional wastewater connection fee.

The rate study determined an increase to the existing connection fee from $5,107 to $6,289 was needed to adequately support future expansion and improvement of the Agency's regional wastewater system. The 2015 Wastewater Connection Fee Report (April 10, 2015) by Carollo explains the methodology and assumptions applied in the calculation of the wastewater connection fee, and provides a detail account of the capital projects included in the calculation.

To lessen the impact to the development community of the $1,182 increase to the wastewater connection and the new water connection fee of $1,385, a combined amount of $2,567, the Board agreed to defer the effective date for the FY 2015/16 fee until January 1, 2016; maintaining the current wastewater connection fee unchanged through December 31, 2015.

Additionally, the increase to the wastewater connection will be phased through FY 2019/20 as reported on Table 1.

Table 1: Proposed Wastewater Connection Fees

Fiscal Year	Effective date	Fee/EDU	Key Assumptions
FY 2015/16	7/01/2015	$5,107	No change in the existing fee.
	1/01/2016	$5,415	Phased implementation of the proposed increase from $5,107 to $6,289 per EDU; $308 1/1/16 and $308 1/1/17 plus 5% per annum.
FY 2016/17	07/01/2016	$5,415	No change in the existing fee.
	01/01/2017	$6,009	Phased implementation of $308 per EDU + 5%.
FY 2017/18	7/01/2017	$6,309	Assumes a 5% increase each fiscal year.
FY 2018/19	7/01/2018	$6,624	
FY 2019/20	7/01/2019	$6,955	

Based on current assumptions and the pace of the projected number of new EDU connections over the next five fiscal years (19,250 units), the phased implementation is estimated to result in reduced fees of $8.9 million. Staff will diligently pursue grant funding opportunities to replace the estimated reduction in fees. The Agency has committed to review both connection fees (regional wastewater and regional water) periodically (at a minimum of every five years) and adjust the fees as needed to align with actual and updated growth projections and for inflation per the Engineering News Record Construction Cost Index (ENR-CCI). This periodic review and adjustment will ensure that connection fees are set to adequately fund future expansion of the regional wastewater and regional water systems in a timely and cost effective manner to meet future growth.

As a key stakeholder, the Building Industry Association (BIA) Baldy View Chapter was invited to participate in the review and discussion of both the wastewater and water connection fees. Additionally, BIA contracted with David Taussig & Associates (DTA) to conduct a peer review of both connection fees. Copies of the BIA inquiries and Agency responses were shared with member agencies and key stakeholders, including members of the Regional Committees.

A concern raised by DTA was the inclusion of fund reserves in the calculation of the connection fees. The Agency considers connection fees to be tied to the benefit conferred on the property assessed, and represent fees for integration in the sewer and water systems, rather that fees paid in exchange of capacity. The Agency's legal counsel determined that authority is afforded by California *Water Code* Section 71616, and other similar statutes authorizing the establishment of reasonable reserves by municipal water districts. There are ample rate study analysis of other public agencies who utilize connection fees to help fund reasonable reserves, including the City of San Diego, City of Chula Vista, City of San Francisco, Contra Costa Water District, San

Diego County Water Authority, City of Beverly Hills, City of Healdsburg, Avila Beach Community Service District, and Western Municipal Water District.

Attached is a copy of BIAs final letter dated 4/27/15 completed their peer review and support for the Agency's phased implementation of the connection fees.

Water Connection Fee

Premised on the principle that "growth pays for growth", the new water connection fee will support future capital investment and expansion of the Agency's regional water system which is comprised of potable water, recycled water, and groundwater recharge facilities. The Governor's Executive Order issued on April 1, 2015, mandating statewide cutback in urban water use of 25 percent through February 2016 as compared to 2013 and the limited imported water supplies from the State Water Project make it essential for the region to secure and develop more reliable and resilient local water supplies. Future economic development is dependent on having a reliable and sustainable water supply that can meet the needs of existing and future residents throughout the region. Included in IEUA's long term planning documents is the expansion of the Agency's regional recycled water distribution system and groundwater recharge facilities, as well as continual development of local water supplies.

These capital investment projects in the Recycled Water (WC), Recharge Water (RW), and Water Resources (WW) programs will be supported by the new water connection fee. Based on the adopted FYs 2016-2025 TYCIP, approximately 94 percent of the new water connection fee is designated for capital projects needed to enhance and expand the Agency's regional recycled water distribution system and groundwater recharge facilities. The remaining six percent is allocated to support investment in water resource capital, such as the development of regional water supplies and water resources capital projects, including a small portion of the Agency's committed contribution to support regional resiliency projects submitted by member agencies.

Based on the 2015 Water Connection Fee Update Final Report (April 16, 2015), the new water connection fee will be initially set at $693 per meter equivalent units (MEU) for a residential unit (5/8" and ¾" meter sizes) with an effective date of January 1, 2016, as reported on Table 2. This represents 50 percent of the proposed rate in final report. Additionally, to lessen the impact on new development, the implementation of the proposed fees is phased in over a period of 18 months with annual adjustment of 5 percent beginning January 1, 2017.

Table 2: Proposed Water Connection Fee

	FY 2015/16	FY 2016/17		FY 2017/18	FY 2018/19	FY 2019/20
Effective Date	*1/01/16*	*7/01/16*	*01/01/17*	*7/01/17*	*7/01/18*	*7/01/19*
Water Connection Fee /MEU	$693	$693	$1,455	$1,527	$1,604	$1,684

The complete fee schedule per meter size is included in Table A1 in the Appendix.

Recycled Water Program Rates

The recycled water volumetric rates support the costs associated with the operations and maintenance of the Agency's water recycling facilities, operating costs for the groundwater recharge basins not reimbursed by Chino Basin Watermaster (CBWM), including the Agency's pro-rata share for basins recharged with recycled water, and debt service costs related to the financing of existing facilities and infrastructure (including the Southern Area and Wineville Area projects).

The proposed recycled water rates for FYs 2015/16 through 2019/20, shown on Table 3 are based on the current volumetric rate structure. As recommended by the Board, the proposed rates achieve cost of service over three years, and comply with the threshold of up to 70 percent of the projected MWD Untreated Tier 1 rate. The "70 percent" threshold established by the Board ensures that rates are maintained at an affordable level so recycled water continues to be a good value for the region.

Table 3: Recycled Water Program Proposed Multi-Year Rates

	FY 2015/16	FY 2016/17	FY 2017/18	FY 2018/19	FY 2019/20
Effective Date	*10/01/15*	*7/01/16*	*7/01/17*	*7/01/18*	*7/01/19*
Direct Delivery/AF	$350	$410	$470	$480	$490
Groundwater Recharge/AF	$410	$470	$530	$540	$550

FYs 2015/16 and 2016/17 Key Budget Assumptions

The proposed budget is a five-year business plan, consisting of biennial budget for FYs 2015/16 and 2016/17 and a forecast for the three ensuing fiscal years. The key assumptions for the proposed biennial budget are summarized on Table A3 in the Appendix.

Employment Costs

The biennial budget includes a reduction of the Agency's vacancy factor from 8 percent (actual average over the last three fiscal years) to 4 percent in FY 2015/16 and 3 percent in FY 2016/17 to support succession planning. Thereafter, the vacancy factor is maintained at 3 percent. There is no increase in the number of authorized full time equivalent (FTE) positions which is maintained at 290 through FY 2019/20. A summary of total employment costs is provided in Table A2 in the Appendix.

Debt service

Additionally, included in the five year business plan is the early repayment of the 2008A Revenue Bonds (2008A Bonds) with an outstanding principal balance of $125 million and annual interest rate of 5%. The proposed repayment is planned over a five year period beginning in FY 2017/18 when the bonds are eligible for refunding. At an interest rate of 5% and scheduled maturity of 2038, total interest savings are estimated at $80 million with present value savings of over $50 million.

Regional Wastewater Capital Improvement (RC) Fund

A major revenue source for the RC fund is the fees levied for new connections to its regional wastewater system, referred to as new wastewater connections fees. Pursuant to the Regional Sewage Service Contract (Regional Contract), member agencies collect and hold these funds in a trust account (Capital Construction Reimbursement Accounts) until they are "called" or requested by the Agency to support planned capital expenditures for the regional wastewater system.

Property tax receipts are another major funding source for the RC fund. In accordance with the Regional Contract, property tax receipts collected from Improvement District "C" (IDC) are fully allocated to the RC fund. IDC tax receipts represent 65 percent, or approximately $26.8 million of total property tax receipts in FY 2015/16.

Based on the San Bernardino County Tax Assessor estimate, a 5 percent increase in total property tax receipts is assumed for FY 2015/16 and a 4 percent increase in FY 2016/17. Property tax receipts budgeted in the RC fund are first allocated to support debt service costs of $13.5 million in FY 2015/16 and $13.7 million in FY 2016/17, with the remaining balance designated to support the Regional wastewater capital improvement plan (CIP).

Table 4: RC Fund Major Revenues and Other Funding Sources

$Millions	Major Funding Sources	FY 2015/16	FY 2016/17	Key Assumptions
Regional Wastewater Capital (RC)	Wastewater Connections Fees	$22.4	$26.2	4,330 and 4,580 new wastewater connections. Fee increases to $5,415, effective 1/1/16 and $6,009 effective 1/1/17.
	Property Tax Receipts	26.7	27.5	No change in the 65% allocation pursuant to the Regional Contract. Assumes a 5% increase in FY 2015/16 and 4% increase in FY 2016/17.
	Inter-Fund Transfers	0.0	2.0	Transfer from the RO fund for its share of RP-2 Relocation/ RP-5 Solids Treatment Facility project.
	Total	**$49.1**	**$55.7**	

Table 5: RC Fund Major Expenses & Other Uses of Funds

$Millions	Major Uses of Funds	FY 2015/16	FY 2016/17	Key Assumptions
Regional Wastewater Capital (RC)	Operating Expenses	$5.9	$6.5	Administrative costs for support of the Regional capital improvement plan (CIP).
	Debt Service Costs	13.5	13.6	Includes principal & interest for the 2008A, 2008B and 2010A bonds, SRF loan for RP-1 Dewatering Expansion Facility.
	Capital Improvement Plan (CIP)	17.9	13.8	Includes capital investment in the IERCA. See Table 6 for summary of major capital projects.
	Inter-Fund Transfers	9.8	11.9	Capital and debt service to other funds.
	Total	**$47.1**	**$45.8**	

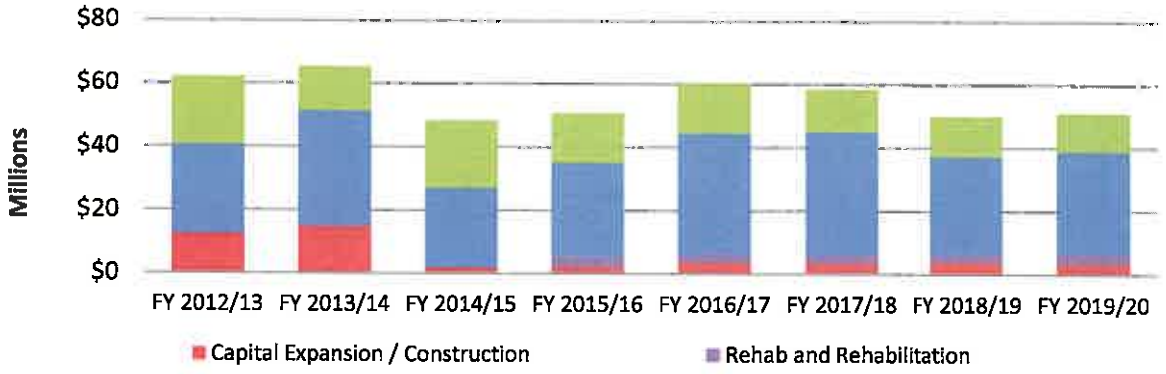
Inter-fund transfers from the RC fund support debt service and capital expenditures. One example is an $81 thousand inter-fund transfer to the RO fund for the RC share of the New Water Quality Laboratory project in FY 2016/17. In FY 2016/17 the RC fund will receive an inter-fund transfer from the RO fund for its share of the RP-2 Relocation/RP-5 Solids Expansion project, as noted in Table 4 above.

In addition to debt service costs, the other major expenditure in the RC fund is capital expenditures. A total of $17.9 million in capital project costs is budgeted in FY 2015/16 and $13.3 million in FY 2016/17. Some of the major projects for FYs 2015/16 and 2016/17 are listed below in Table 6.

Table 6: RC Fund Major Capital Projects

$Millions	Project	FY 2015/16	FY 2016/17
RC Fund	RP-2 Relocation/RP-5 Solids Treatment Facility	$0.0	$4.0
	RP-1 Mixed Liquor Return Pump	1.0	3.0
	RP-1 and RP-5 Expansion PDR	2.0	2.0
	RP-4 Chlorination Facility Retrofit	0.5	1.5
	Chino Basin Groundwater Supply Wells	6.0	-
	All Other Regional Capital Projects	8.4	3.3
	Major Capital Projects	**$17.9**	**$13.8**

Figure 1
RC Fund Reserve Balance by Type



The RC fund total estimated ending fund balance in FY 2015/16 is projected to be $50.7 million and $61.2 million in FY 2016/17. The estimated increase in the second year is primarily due to a higher projection of new wastewater connections (4,580 compared to the 4,330 units projected for FY 2015/16). The gradual drop in total fund balance over the ensuing three fiscal years is due to a smoothing of connection fee revenue (number of new connections drop to an average of 3,450 per year), higher capital expenditures on major plant expansions, and the early retirement of the 2008A bonds starting in FY 2017/18.

Regional Wastewater Operations and Maintenance (RO) Fund
The key revenue and funding sources for the RO fund include: EDU volumetric charges, property taxes, and reimbursement from the Inland Empire Regional Composting Authority (IERCA) for labor and operating costs. Major expenses include operating costs for the collection, treatment, and disposal of wastewater, maintenance and capital replacement and rehabilitation (R&R) costs of regional facilities and infrastructure, organic management activities, including the Agency's 50 percent share of the IERCA composter, and debt service costs.

Pursuant to the Agency's commitment to have rates that fully recover the cost of service, incremental increases to the monthly EDU volumetric rate were proposed over the next five fiscal years. Upon the Regional Committees review in February and March, a multi-year EDU volumetric rate (FYs 2015/16 to 2019/20) was adopted by the IEUA Board March 18, 2015, as reported in Table 7. Based on current assumptions, full cost of service, or recovery of O&M, R&R, and debt service costs, is projected to be reached in FY 2018/19.

Table 7: Adopted EDU Volumetric Rates FYs 2015/16 – 2019/20

Rate Description	FY 2014/15	FY 2015/16	FY 2016/17	FY 2017/18	FY 2018/19	FY 2019/20
EDU Volumetric Rate	$14.39	$15.89	$17.14	$18.39	$19.59	$20.00
Rate Increase		$1.50	$1.25	$1.25	$1.20	$0.41
Effective Date		10/01/15	07/01/16	07/01/17	07/01/18	07/01/19

Recycled Water (WC) Fund

A key initiative for the Agency is to optimize the beneficial reuse of recycled water and provide a cost effective and reliable alternative to imported water for the region. Included in IEUA's long term planning documents is the expansion of the regional recycled water distribution system and groundwater recharge facilities, as well as continual development of local water supplies.

Total regional recycled water acre feet (AF) deliveries in FY 2015/16 are projected to be 35,150 with related revenues of $11.9 million. Total revenues also include a Local Projects Program (LPP) rebate of $2.1 million from the Metropolitan Water District of Southern California (MWD). In FY 2016/17 deliveries are projected to be 37,100 AF with operating revenues at $15.7 million and the MWD rebate of $2.1 million which is set to expire on 6/30/17.

SRF loans, grants, and the water connection fees are the primary funding sources for the Recycled Water capital program (Table 9). State Revolving Fund (SRF) loan proceeds and grant receipts are estimated at $15.2 million in FY 2015/16 and $18.6 million in FY 2016/17 as summarized on Table 8.

Table 8: WC Fund Major Revenue & Other Funding Sources

$Millions	Major Funding Sources	FY 2015/16	FY 2016/17	Key Assumptions
Recycled Water (WC)	Direct Sales	$7.4	$9.7	23,700 AF in FY 2015/16 24,200 AF in FY 2016/17.
	Recharge Sales	4.5	6.0	11,450 AF in FY 2015/16 12,900 AF in FY 2016/17.
	MWD LPP Rebate	2.1	2.1	$134/AF rebate for recycled water sales up tc 13,500 AF per FY. Rebate expires in June 2017.
	Connection Fee	0.7	4.4	985 MEUs in FY 2015/16 4,167 MEUs in FY 2016/17.
	Property Tax Receipts	2.1	2.1	The 5% allocation of property tax receipts to support debt service costs.
	Loan and Grant Proceeds	15.2	18.6	Continue to leverage SRF loans and grants to support Recycled Water capital projects
	Other	3.1	2.5	Interest and other reimbursements
	Total	**$35.1**	**$45.4**	

Major expenses for the WC fund are primarily capital, debt service and operating costs. Capital expenditures in FY 2015/16 and FY 2016/17 are projected to be $16.2 and $18.7 million respectively. Operating costs include labor, pumping costs, O&M projects and a portion of the ground water recharge operating costs not reimbursed by CBWM. Biennial projected major expense and other uses of funds are summarized in Table 9:

Table 9: WC Fund Major Expenses & Other Uses of Funds

$Millions	Major Uses of Funds	FY 2015/16	FY 2016/17	Key Assumptions
Recycled Water (WC)	Utilities	$2.9	$3.0	Higher pumping costs are driving an increase of nearly $0.4M compared to projected actuals. $0.12 kWh electricity rate for direct access, renewal energy rates based Purchase Power Agreements (PPAs) melded rate.
	Operating Expense	8.5	9.1	Includes labor, professional fees and services, materials and supplies, and a portion of the groundwater recharge operations expense and inter-fund transfers to support operating and capital costs.
	Debt Service Costs	6.2	8.2	Includes principal and interest costs for outstanding debt. For FY 2016/17 debt service includes inter-fund loan repayment of $2.0 million to the NC fund.
	Capital Improvement Plan (CIP)	16.2	18.7	See Table 10 for summary of major capital projects.
	Water Connection Fee Transfers	0.1	0.5	Connection fee support to GG ($.03 and $.01), RW ($.06 and $.10) and WW ($.04 and $.36) funds.
	Total	**$33.9**	**$39.5**	

Annual debt service costs are estimated to increase to $6.2 million in FY 2015/16 and $8.2 million in FY 2016/17. The first debt service repayment for the Southern Area Recycled Water project slated for completion in FY 2014/15 is scheduled in FY 2015/16. Repayment of the $28.5 million outstanding inter-fund loans ($13.5 million due to RC fund and $15 million due to the NC fund) are scheduled to begin in FY 2016/17, with full repayment projected by FY 2024/25. A summary of inter-fund loans is provided in Appendix A6.

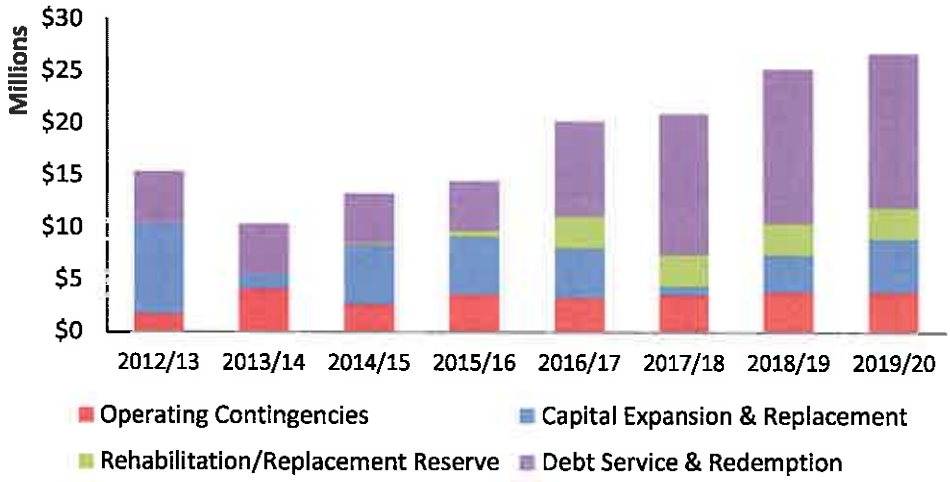
In FY 2015/16 capital project costs are budgeted at $16.2 million and $18.7 million in FY 2016/17. A summary of the major capital projects is provided in Table 10:

Table 10: WC Fund Major Capital Projects

$Millions	Project	FY 2015/16	FY 2016/17
WC Fund	Recycled Water Connections Pomona/Jurupa	$5.0	$10.0
	San Sevaine Improvements	3.5	3.0
	Napa Lateral/SB Speedway	0.2	1.0
	RP-1 Parallel Outfall Pipeline	0.0	1.0
	Central/Wineville Area Projects	4.2	0.1
	All Other Capital Projects	3.3	3.6
	Major Capital Projects	**$16.2**	**$18.7**

Fund reserves remain relatively unchanged in FYs 2014/15 and 2015/16 then are projected to increase in FY 2016/17 and thereafter. The increase is mainly due to the receipt of water connection fees, and higher revenues from recycled water sales. SRF loans and grants have been the primary funding source for construction of the Agency's regional recycled water distribution system. The new water connection fees will support capital expansion and improvement of the Agency's regional water system and lessen the amount of future borrowings.

Figure 2: WC Fund Reserve Balance by Type



Recharge Water (RW) Fund

The Recharge Water (RW) fund accounts for the revenues and expenses associated with groundwater (GWR) recharge operations and maintenance through joint efforts with the Chino Basin Watermaster (CBWM), Chino Basin Water Conservation District, and the San Bernardino County Flood Control District. Operating expenses include general basin maintenance and/or restoration, groundwater administration (e.g. labor, tools, and supplies), contracted services (e.g. weeding and vector control), compliance reporting, and environmental documentation for permit compliance.

Total budgeted revenues, other funding sources and inter fund contributions/support for FY 2015/16 and FY 2016/17 are $3.6 million and $7.4 million, respectively. The budget is comprised of reimbursements from CBWM for groundwater recharge facilities' operations and

maintenance (O&M), capital/special project support, and debt service costs. The remaining balance will be contributed by IEUA for its portion of capital (50/50 shared with CBWM), debt service, and pro-rata of O&M cost (Table 11).

Table 11: RW Fund Revenue and Other Funding Sources

$Millions	Major Funding Sources	FY 2015/16	FY 2016/17	Description
Recharge Water (RW) Fund	CBWM GWR O&M	$0.8	$0.8	CBWM reimbursement of groundwater recharge operations & maintenance (GWR O&M) and facilities.
	CBWM Debt Service	0.3	0.5	CBWM reimbursement for its share of the debt service costs, interest rate estimated at 1%.
	CBWM Capital and O&M Projects	1.2	4.2	Capital project cost shared with CBWM
	IEUA Operations Support	1.3	1.9	Operating support for the Agency's pro-rate share for groundwater basin maintenance; capital projects; and non-reimbursable labor cost and water fee share from Recycled Water Fund. In addition to debt service share from the Regional Wastewater Capital Improvement (RC) Fund
	Total	**$3.6**	**$7.4**	

Total Recharge Water Program expenses for FY 2015/16 and FY 2016/17 are $3.9 million and $7.3 million, respectively. The increase in FY 2016/17 is mainly due to capital expenditures. The expenses include debt service costs for the Chino Basin Facilities Improvement Project (CBFIP); groundwater operations and maintenance cost, and capital projects.

The FY 2015/16 and FY 2016/17 groundwater O&M Expense Budget includes utilities and general groundwater basin maintenance costs for infiltration restoration and slope repairs on three groundwater basins, namely Brooks, RP-3 and Victoria Basins (Table 12). The Agency's FY 2015/16 and FY 2016/17 pro-rata share is estimated to $466,000 and $791,000, respectively.

Table 12: RW Major Expenses & Other Uses of Funds

$Millions	Major Uses of Funds	FY 2015/16	FY 2016/17	Description
Recharge Water (RW) Fund	Debt Service	$0.9	$1.0	Bond principal, interest, and financial expenses.
	Groundwater O&M	1.6	1.6	GWR maintenance and administration costs, utilities, specialty O&M, CBWM, SBCFCD costs, and IEUA pro-rata share.
	CBWM Capital Improvement Plan	1.4	4.7	Capital project cost
	Total Expenses	**$3.9**	**$7.3**	

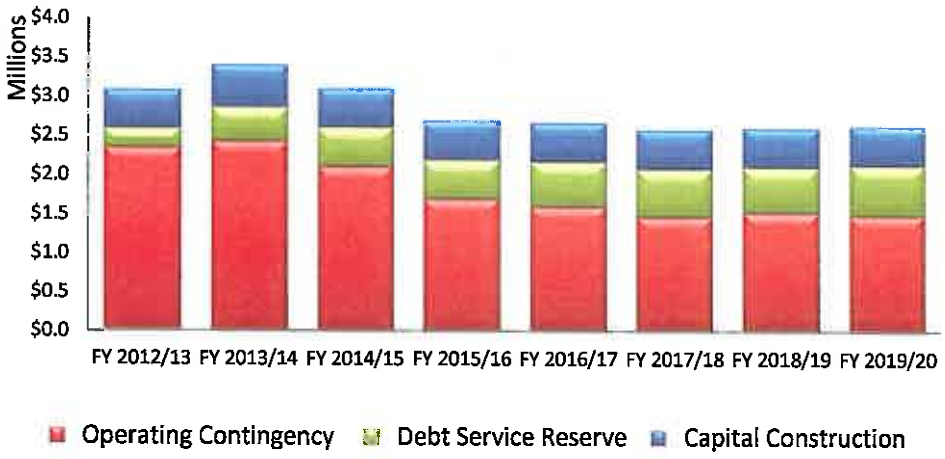
The FY 2015/16 and FY 2016/17 capital project costs for the Recharge Capital Program mainly involves modifications, improvements and refurbishment at selected basins for $1.4 million and $4.7 million, respectively (Table 13). CBWM has updated the Recharge Master Plan, and Agency staff is working closely with CBWM staff to ensure that planning efforts are coordinated and appropriate for the Agency's service area.

Table 13: Recharge Program Capital Projects

$Millions	Capital Projects	FY 2015/16	FY 2016/17
Recharge Water (RW) Fund	RW15003 Recharge Master Plan Update	$0.82	$3.10
	RW15004 Lower Day RMPU	0.36	1.16
	EN16052 Ely Basin Turnout Remote Control Upgrade	0.20	0.40
	RW15002 Upper Santa Ana River HCF	0.08	0.08
	Total Capital Projects	**$1.46**	**$4.74**

The ending fund balance for FY 2015/16 and FY 2016/17 is projected to be $2.7 million and $2.8 million, respectively (Figure 3). Throughout the subsequent years, ending fund balances are estimated to average $2.8 million, as the majority of operating expenditures are fully reimbursable by CBWM and IEUA.

Figure 3: Fund Balance for Recharge Water Fund



FY 2016 - 2025 Ten Year Capital Improvement Plan (TYCIP)

Since adoption of the TYCIP in March 2015, further analysis, project changes, reductions and additions have resulted in a reduction from $901 million to $667 million. The decrease is primarily due a reduction of over $200 million in the Water Resources (WW) fund for Local Supply Resilience Projects and the removal of $25 million of asset management projects in the Recycled Water program.

The TYCIP continues to focus on critical R&R projects necessary to meet reliability and regulatory requirements, maintaining the Agency's facilities and infrastructure is vital to ensuring the long-term reliability and quality of service that the Agency is committed to provide. Additionally, the TYCIP includes planned expansion and process improvements of existing facilities as the Agency prepares to meet higher service demands anticipated from the expected growth in its service area. Appendix Table A7 includes a list of major projects with at least $1 million annual expense in the biennial budget years.

The Agency is in the process of updating several key planning documents, including Integrated Resources Plan, Recycled Water Program Strategy, Water Use Efficiency Business Plan, and 2015 Urban Water Management Plan. It is anticipated that some of these planning efforts will be completed by fall 2015 and will help to identify new priorities for the region. Projects identified as part of these updates will be further refined and included in next year's TYCIP to meet the region's future needs. The Agency continues to work collaboratively with its member agencies and regional stakeholders to identify projects that will enhance regional water use efficiency, quality, reliability, and resiliency in response to climate change and recurring drought conditions.

Implementation of the TYCIP is consistent with several of the Agency's Business Goals, including *Water Reliability* by promoting cost-effective, reliable, efficient and sustainable water supplies within the region; and *Wastewater Management* by ensuring that IEUA systems will be master planned, managed and constructed to ensure that when expansion planning is triggered, designs/construction can be completed to meet regulatory/growth needs in an expeditious, environmentally responsible and cost effective manner.

Debt Coverage Ratio

The Debt Coverage Ratio (DCR) is the measurement of an entity's ability to generate enough cash to cover debt payments (principal payments and related interest), and serves as a critical financial measure in determining its overall credit rating. DCR also affects an entity's market accessibility for future borrowings and the associated costs.

Credit Rating Agencies assign credit ratings to organizations and debt issues to reflect the credit worthiness of the whole organization or a specific debt issue and serve as a notable reference to the investment community. All rating agencies agree on the general characteristics that define municipal water and sewer entities in the U.S.; are natural monopolies that provide indispensable services essential to public health, the environment and the economy, and generally have local rate-setting authority. Water and sewer systems agencies are typically subject to strong regulatory requirements and intense capital investments because of the nature of the services they provide.

Current bond covenants require the Agency to maintain a minimum total DCR of 1.25 times (x) or higher on total outstanding debt. The Agency has established a minimum DCR target of 1.6x for parity debt. The Agency has no legal debt limits imposed by state legislation. As indicated in Table 14, the projected favorable trajectory of the Agency's DCR is driven by a combination of higher revenues and early retirement of high interest debt.

Table 14: Projected Debt Coverage Ratio (DRC) Trend

	FY 2014/15	FY 2015/16	FY 2016/17	FY 2017/18	FY 2018/19	FY 2019/20
	Projected	*Proposed Budget*		*Forecast*		
DCR	2.54x	2.36x	3.20x	3.49x	3.80x	4.01x

Conclusion

The Agency is committed to adopt rates and fees that fully recover the cost of providing the services in order to maintain a high-quality level of service, (funding and appropriation commitment under the Fiscal Responsibility Business goal). The rates proposed for the five-year period support this commitment. Member agencies and other stakeholders have been actively engaged in reviewing and evaluating the proposed changes to existing rate structures and the implementation of a new water connection fee to appropriately support future investment in regional water reliability and resiliency. Providing reliable and sustainable water supplies is essential to ensuring the region can continue to prosper from future economic development.

Additionally, the new water connection fee is consistent with the Board's key policy principle to have "growth pays for growth". Having future users pay their share of existing available capacity and expansion/enhancement of capacity to meet their needs is a more equitable and sustainable approach. Additionally, adoption of five year rates provides the Agency and its member agencies with stable and predictable revenue streams.

Attached are copies of the Sources and Uses of Fund reports for the Regional Wastewater Operations and Capital funds and the Recycled Water and Recharge Water programs.

Comments	Increase in actual FTE count needed to support increasing service area demands.	Implementation of the Agency's Cost Containment Plan, initial cutback in staffing level.	Cost Containment Plan: Permanent reduction of 5 authorized FTE positions, established 5% vacancy factor.	Cost Containment Plan: Eliminated performance incentives, negotiated significant revisions to personnel benefits, including capping of health insurance benefits.	Cost Containment Plan: Only filled positions critical to the day-to-day operations of the Agency. Employees began paying a portion (2%) of the employer paid contribution rate	Cost Containment Plan: Only filled positions critical to the day-to-day operations of the Agency. Employee paid pension rate contribution increased to 3% as 9/1/2013.		Cost Containment Plan: Permanent reduction of 5 authorized FTE positions. Employee paid pension rate contribution increased to 4%. Includes the Agency's initial $4.5 million annual payment against the Agency's pension unfunded liability (UAL). Annual UAL payments are intended to achieve	Employee paid pension rate contribution increased to 5.5%, offset by COLA and a decrease in the vacancy factor to 4%.	Employee paid pension rate contribution increased to 7%, offset by COLA and reduction of the vacancy factor to 3%.	Employee paid pension rate contribution increased to 8%, offset by COLA.	Authorized staffing level maintained at 290 FTEs with a vacancy factor of 3%.	
	3% COLA per negotiated MOUs.	3% COLA per negotiated MOUs.	3% COLA per negotiated MOUs.	0% COLA awarded.	0% COLA awarded.	0% COLA awarded.	0% COLA awarded.	3.0% COLA per negotiated MOUs.	3.0% COLA per negotiated MOUs.	3.5% COLA per negotiated MOUs.	3.5% COLA per negotiated MOUs.	Assumed 2.0% COLA subject to negotiations	Assumed 2.0% COLA subject to negotiations

Appendix Table A3: Key Assumption for FY 2015/16 and FY 2016/17 Budget

Revenues and Other Funding Sources	Expenses and Other Uses of Funds
New EDU and water connections (MEU) estimated to be: FY 2015/16 4,330 EDU/ 985 MEU FY 2016/17 4,579 EDU/ 4,167 MEU New EDU connections of 30,000 over 10 years is lower than 40,523 projected by member agencies.	Staffing level maintained at 290 FTEs and vacancy factor reduced to support succession planning; 4% FY 2015/16 and 3% thereafter
3.2 million total number of billable volumetric EDUs, 0.25% annual growth.	COLA partially offset by additional employee paid CalPERS contribution of 1.50% each year: 3.0% COLA FY 2015/16 (5.50% employee paid) 3.5% COLA FY 2016/17 (7.0% employee paid).
Total recycled water deliveries: 35,150 AF FY 2015/16 37,100 AF FY 2016/17 Projected to reach 50,000 AF by 2025.	6% increase in health insurance premiums and 5% increase in CalPERS employer rate.
Potable water deliveries anticipate implementation of the Water Supply Allocation Plan by MWD: 50,000 AF FY 2015/16 50,000 AF FY 2016/17 +10,000 AF of other imported water during wet years (2019 & 2023) Ten year average potable water deliveries, 50,000 AF for FY 2015/16 for RTS pass-through.	3% average CPI for O&M expenses and $4.5 million annual payment against pension unfunded accrued liability (UAL).
2% - 5% growth in property tax receipts. Assumes no change in the level of property tax receipts and no change in the fund allocation: Administrative Services (GG) 8% Recycled Water (WC) 5% Regional Wastewater O&M (RO) 22% Regional Wastewater Capital (RC) 65%	Pay down of high interest debt beginning in FY 2017/18
Capital Improvement Plan (CIP) partially funded by low interest SRF loans and grants.	CIP aligns with the Agency's TYCIP.

Re: Wastewater and "One-Water" Connection Fees

Dear Regional Policy Committee and IEUA Board Members,

The Building Industry Association, Baldy View Chapter (BIA) has concluded our peer review of the Inland Empire Utilities Agency's (IEUA) proposed Wastewater Connection Fee update and the new "One-Water" Connection Fee. BIA supports the approach by IEUA to phase-in the connection fee increases gradually over the next 2 years. At this time we have no further comments on the fees.

We would also like to commend IEUA on your commitment to maintaining a reliable water management system for both existing and future users in the region. We appreciate the transparency IEUA has demonstrated during the peer-review process and look forward to working with you to address future housing needs in your service area.

Sincerely,

Carlos Rodriguez, CEO

CC: Joe Grindstaff, General Manager
Christina Valencia, Chief Financial Officer
Chris Berch, Executive Manager of Engineering

REVISED 4/28/15

Inland Empire Utilities Agency
A MUNICIPAL WATER DISTRICT

FYs 2015/16 and 2016/17 Biennial Budget and Multi-Year Rates Regional Wastewater, Recycled Water, and Recharge Water Funds

Regional Committees
April 30/May 14, 2015

- **Rates/Fees FYs 2015/16- 2019/20**
  - Wastewater Connection fee
  - Recycled Water rates
  - Water Connection fee
- **Biennial Budgets FYs 2015/16 & 2016/17**
  - Regional Wastewater Capital Improvement (RC) Fund
  - Regional Wastewater Operations & Maintenance (RO) Fund
  - Recycled Water (WC) Fund
  - Recharge Water (RW) Fund

Key Policy Principles

- **Fully recover costs** of providing the service.
- **Be equitable** by maintaining a clear nexus between what a customer pays and the benefit/demand of services received.
- Ensure regional water **reliability and sustainability.**
- Make **growth pay for growth.**
- **Eliminate property tax subsidies** for operation and maintenance costs.
- **Provide fiscal stability** to ensure uninterruptible service during times of revenue uncertainty.
- Be **legally compliant.**

PROPOSED FEES/RATES

Wastewater Connection Fee

	FY 2014/15	FY 2015/16		FY 2016/17		FY 2017/18	FY 2018/19	FY 2019/20
Effective Date		*7/01/15*	*1/01/16*	*7/01/16*	*01/01/17*	*7/01/17*	*7/01/18*	*7/01/19*
Wastewater Connection Fee/EDU	$5,107	$5,107	$5,415	$5,415	$6,009	$6,309	$6,624	$6,955

Water Connection Fee

	FY 2014/15	FY 2015/16	FY 2016/17		FY 2017/18	FY 2018/19	FY 2019/20
Effective Date		*1/01/16*	*7/01/16*	*01/01/17*	*7/01/17*	*7/01/18*	*7/01/19*
Water Connection Fee /MEU	N/A	$693	$693	$1,455	$1,527	$1,604	$1,684

Phased implementation, assumes annual 5% increases beginning 1/1/17 for both connection fees.

Recycled Water Rates

	FY 2014/15	FY 2015/16	FY 2016/17	FY 2017/18	FY 2018/19	FY 2019/20
Effective Date		*10/01/15*	*7/01/16*	*7/01/17*	*7/01/18*	*7/01/19*
Direct Delivery/AF	$290	$350	$410	$470	$480	$490
Groundwater Recharge/AF	$335	$410	$470	$530	$540	$550

Cost of service is the key driver for proposed rate increases.

Regional Drought Update

April 2015

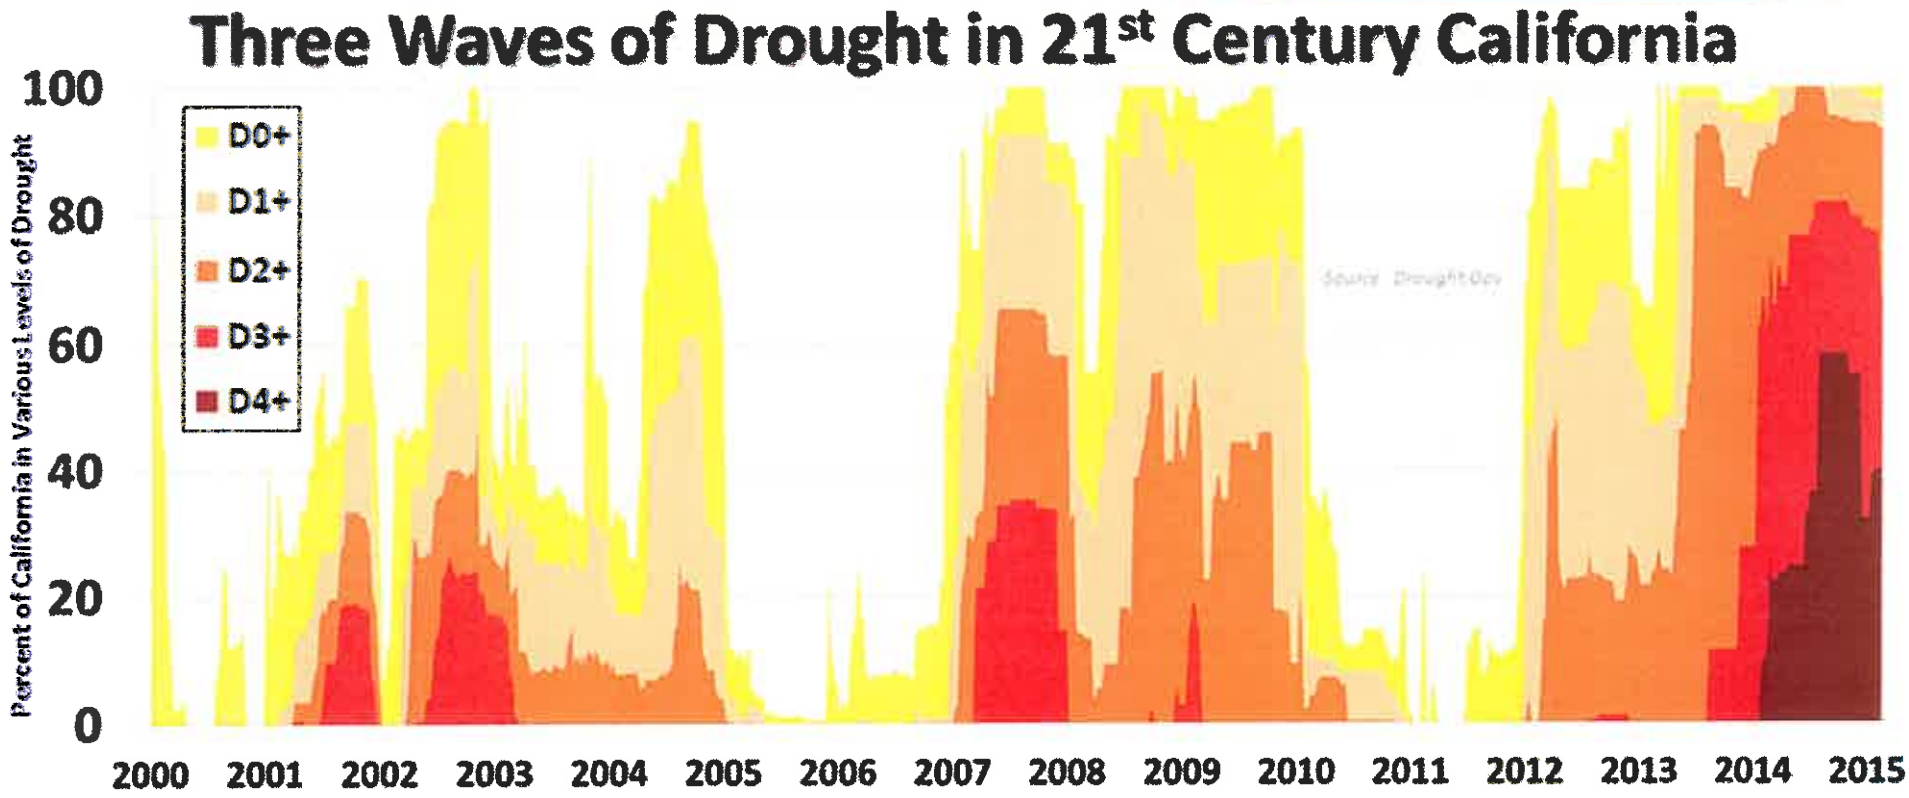
Inland Empire Utilities Agency

A MUNICIPAL WATER DISTRICT

Topics of Discussion

- Statewide Water Supply Conditions
- Regional Drought Update
- Conservation and WUE opportunities

Historical Drought Conditions

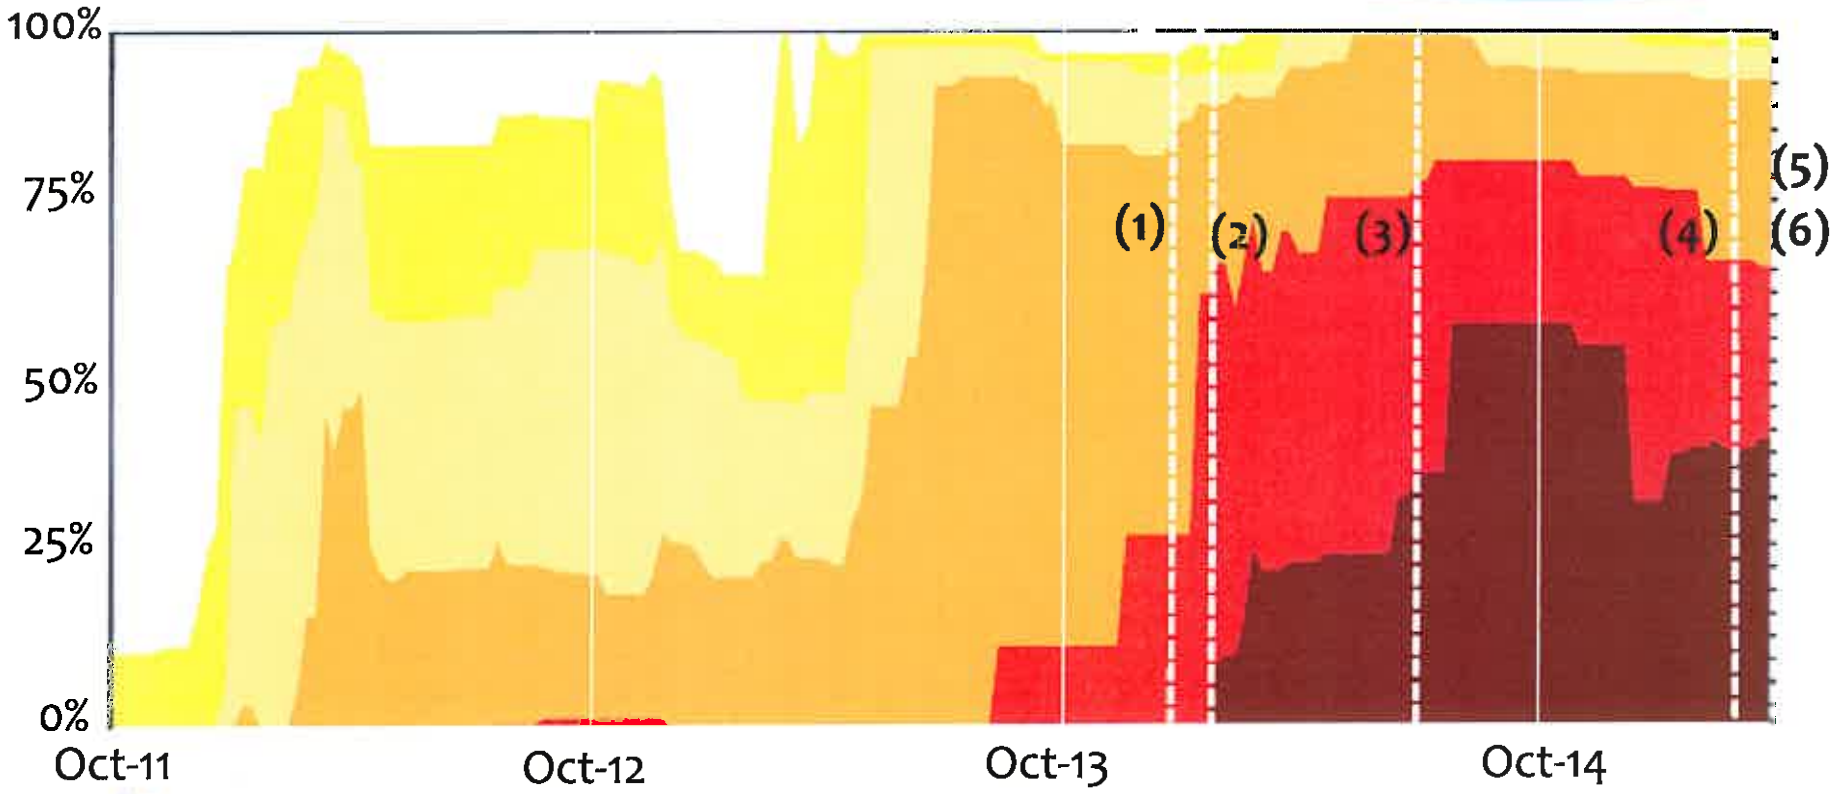


Inland Empire Utilities Agency
A MUNICIPAL WATER DISTRICT

Drought Evolution and Actions

Percent of State in each drought category

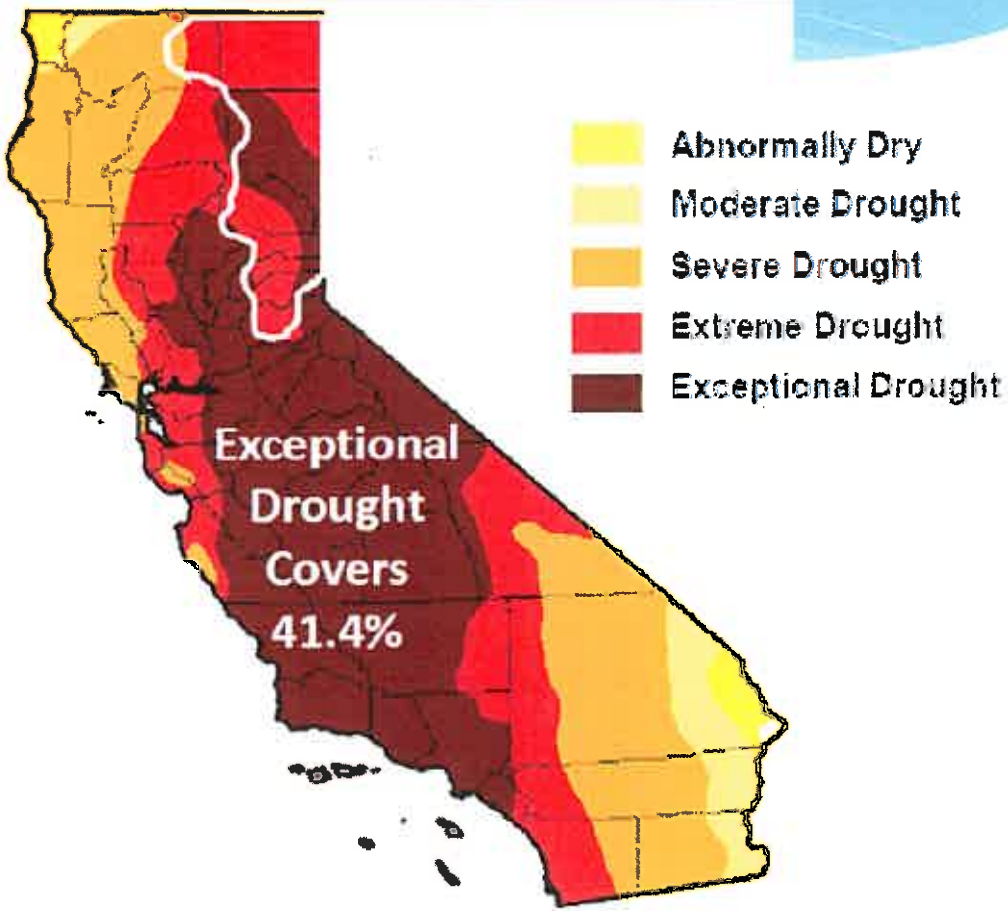
(1) State of Emergency
(2) MWD Water Supply Alert
(3) SWRCB Emerg. Conservation Regs.
(4) SWRCBB Water Use Restrictions
(5) Executive Order
(6) MWD WSAP – Level 3



Inland Empire Utilities Agency
A MUNICIPAL WATER DISTRICT

Drought Monitor – Current Conditions

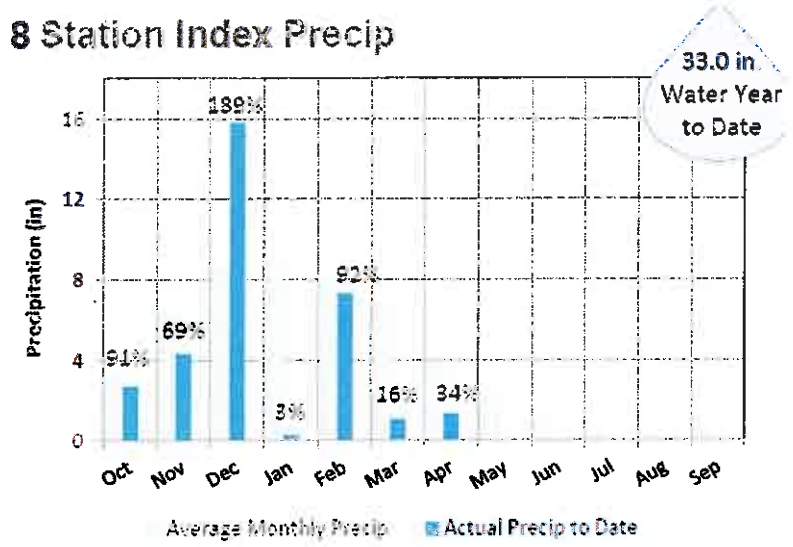
- Over 35 million people affected by drought

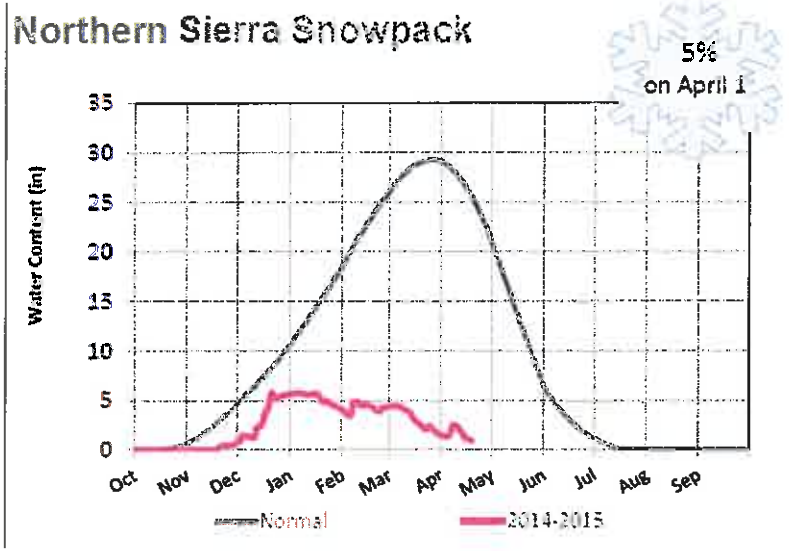


Inland Empire Utilities Agency
A MUNICIPAL WATER DISTRICT

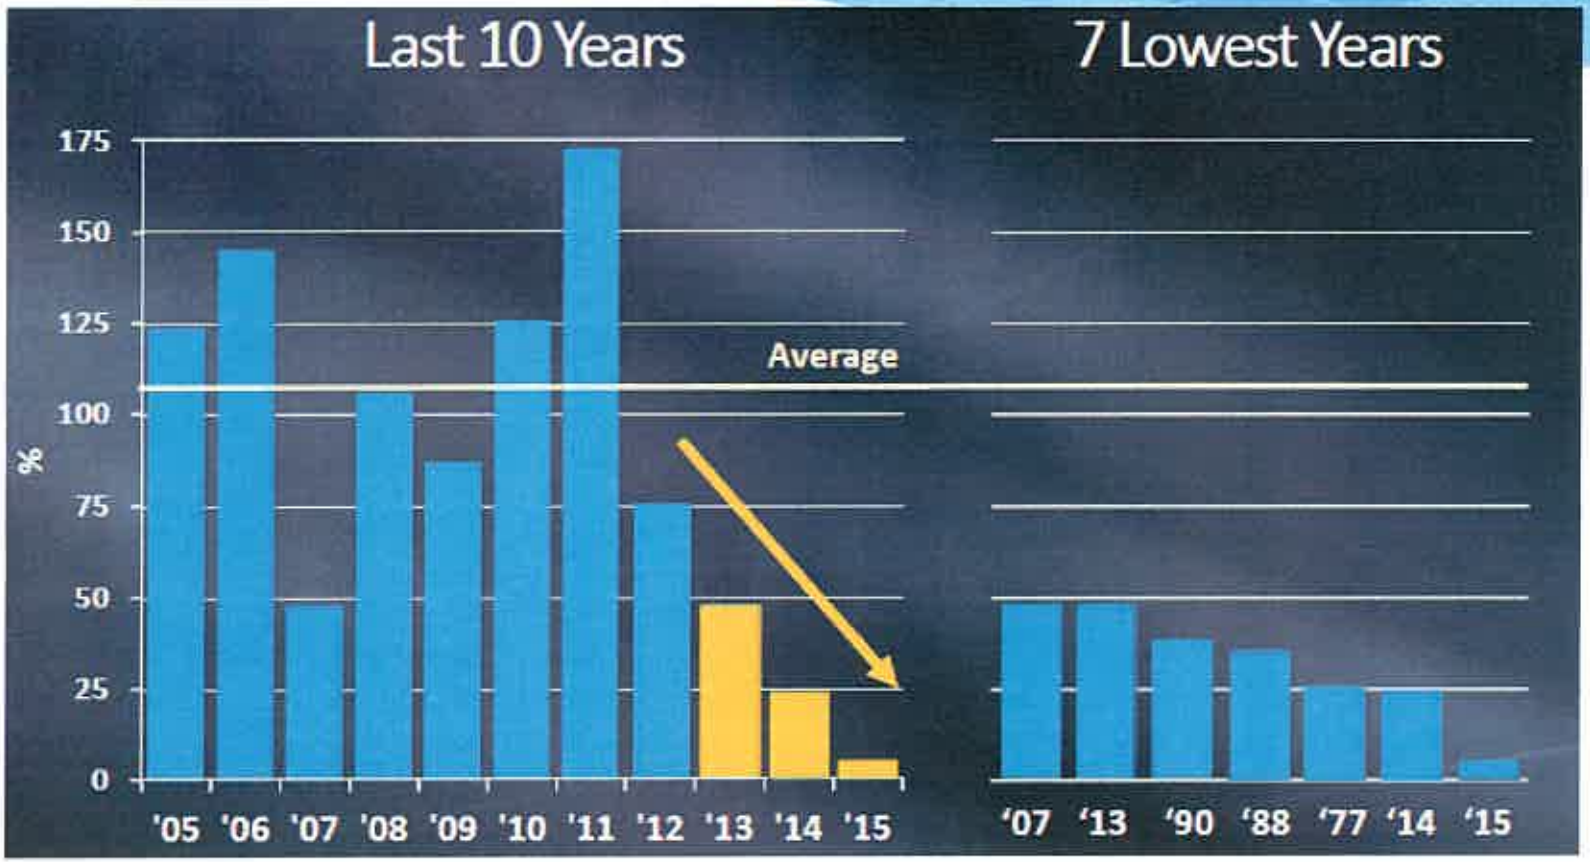
Current Conditions

- 20% SWP Allocation
- Statewide snowpack 5% of normal
  - Reduced 13% since last month
- Sierra 8-Station Index precip 70% of normal
- Last 3yrs among lowest historical snowpack recordings to date



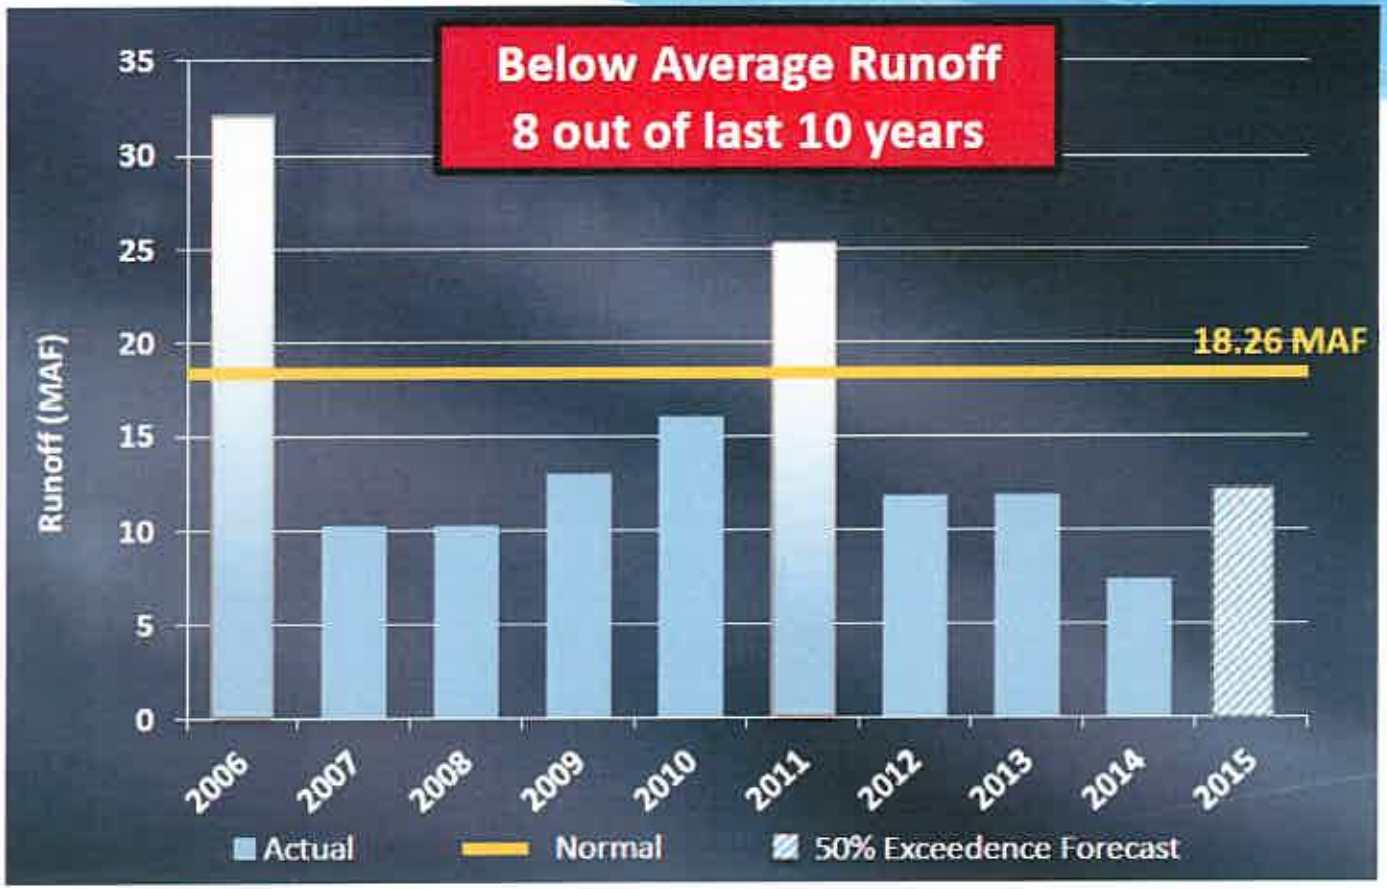


Sierra Historical Snowpack



Inland Empire Utilities Agency
A MUNICIPAL WATER DISTRICT

Northern California Runoff



Impacts of Dry Hydrology

- Reduced snowpack = limited storage increases and potential rapid depletion of reservoirs
- Reduced spring runoff ≠ preserved storage or base flows into Delta during less restrictive months for exports
- Oroville may be needed to meet in-Delta regulatory requirements = Delta exports may be limited
- Impacts felt across the State = MWD transfer supplies at risk

Water Supply Allocation Plan (WSAP)

Inland Empire Utilities Agency
A MUNICIPAL WATER DISTRICT

Date: March 18, 2015

To: The Honorable Board of Directors

Through: Finance, Legal, and Administration Committee *(3/11/15)*

From: P. Joseph Grindstaff
General Manager

Submitted by: Christina Valencia
Chief Financial Officer/Assistant General Manager

Javier Chagoyen-Lazaro
Manager of Finance and Accounting

Subject: FY 2014/15 Second Quarter Budget Variance, Performance Goals Updates, and Budget Transfer

---

RECOMMENDATION

This is an informational item for the Board of Directors to receive and file.

BACKGROUND

The Budget Variance report presents the Agency's financial performance through second quarter ending December 31, 2014. Exhibit A provides a comparison of actual revenues and expenses against the FY 2014/15 Amended Budget including a discussion of major categories with the most significant variances. Exhibit B provides a progress status of Division and Department Goals and Objectives as established in FY 2014/15 Adopted Budget, Exhibit C presents a summary of Operations and Maintenance (O&M) budget transfers approved by management during the second quarter, and Exhibit D lists Board approved budget amendments and the management approved budget transfers between capital projects and between O&M projects by Agency fund. Attachment A provides the FY 2014/15 financial overview of each of the Agency's programs.

TOTAL REVENUES AND OTHER FUNDING SOURCES

Overall, the Agency received total revenues and other funding sources at the end of the second quarter of $66.8 million, or 40.8% of the Amended budget (Exhibit A detail). The following section highlights key variances:

- ***Connection Fees*** – Member agencies reported a total of 1,231 Equivalent Dwelling Units (EDU) new connections, approximately 40.9% of the budgeted 3,000 EDUs which is equivalent to $6.3 million of the budgeted $15.3 million.

- ***Recycled Water Sales*** – Recycled water sales at the end of the second quarter were $6.5 million. Direct delivery was 14,556 AF, $4.5 million, and groundwater recharge was 4,781 AF, $2.0 million, for 68.3% of the annual budget. Total year to date deliveries of 19,337 AF compared to the 32,000 AF projected for the fiscal year.

- ***MWD LPP Rebate*** –Direct recycled water sales in excess of 3,500 AF and up to 17,000 AF are eligible for the Metropolitan Water District (MWD) Local Project Program (LPP) at a rate of $154/AF, for a maximum amount of $2.1 million per fiscal year. At the end of the second quarter, the total rebate was $1.8 million for 11,704 AF of credit or 86.7% of total budget.

- ***Property Taxes*** – General ad-valorem property tax receipts from the San Bernardino County Tax Assessor (County) for the second quarter were $13.8 million or 34.4% of the annual budgeted amount of $40.2 million. RDA pass through payments are due from the County in January and June.

- ***Grants & Loans*** – Total receipts were $3.5 million or 15.1% of the budget. Delays in construction for the Central/Wineville area recycled water projects accounted for the low receipts which are expected to increase during the third and fourth quarters as construction nears completion. The projects are expected to be complete in July 2015.

- ***Cost Reimbursements*** – Total cost reimbursements were $2.6 million or 48.1% of the annual budget. Reimbursements include $1.7 million from the Inland Empire Regional Composting Authority (IERCA), $0.7 million from Chino Basin Desalter Authority (CDA), and $0.2 million from Chino Basin Watermaster (CBWM). Total cost reimbursement budget of $5.4 million, includes $1.2 million from CDA, $3.5 million from IERCA, and $0.7 million from CBWM for the O&M cost share portion.

- ***Other Revenues*** – Total other revenues were $1.3 million or 26.7% of the annual budget. Other revenues include $0.6 million for the recovery of the deferred 4R capital charges from Non-Reclaimable (NC) fund, $0.2 million from lease payment for the RP-5 Solids Handling Facility, and $0.05 million for other items such as project cost reimbursements, energy capacity rebates and a small gain on the sale of assets. The total other revenue budget of $2.9 million includes $1.2 million inter-fund loan transfer from Water Resource (WW) fund, $1.2 million of recovery from the deferred 4R capital project costs, and $0.5 million of annual lease revenue.

TOTAL EXPENSES AND USES OF FUNDS

The Agency's total expenses through the second quarter were $86.8 million, or 45.9% of the $189.3 million Amended budget. The Amended Budget includes $19.3 million of encumbrances carried forward from FY 2014/15. In accordance with Agency Policy A-81 (Fiscal Year-End Carry Forward of Encumbrances and Related Budget), carry forward encumbrances and budget that are not expended by December 31st of each year are subject to cancellation, unless otherwise approved by Executive Management. As of January 31, 2014, a total of $2.5 million in unspent carry over encumbrances and budget were reversed; $2.5 million from projects and less than twenty thousand dollars from O&M expenses.

	Capital & Special Projects	O&M	Total
Carried Forward – September 2014	$18.0	$1.3	$19.3
Encumbrance Return – January 2015	($2.5)	($0.02)	($2.5)
Total Used or Remaining Encumbrance	**$15.5**	**$1.3**	**$16.8**

Key highlights of expenses are:

- ***Employment Expenses*** – Employment expenses through the second quarter were $17.8 million or approximately 43.5% of Amended Budget. The favorable variance was due to a higher than anticipated vacancy factor. A total of 23 positions were vacant and an additional 15 were on hold at the end of the quarter, equivalent to a 13.1% vacancy factor. Hiring activities are anticipated to increase by March, which will reduce the vacancy factor by fiscal year end.

- ***Chemical Expenses*** – This category expended approximately $2.0 million, or 41.3% of Amended Budget. Chemicals usage was below budgeted projections through the second quarter due to seasonal changes in the usage of sodium bisulfite and installation of new CJ2 analyzers which reduced the need for additional solutions and chemicals as well as to the bulk procurement of iron sponge media at the end of prior fiscal year.

- ***Biosolids Recycling*** – Biosolids expenses at the end of the second quarter were $1.5 million or 42.5% of the budget. The favorable variance was caused by a delay of biosolids disposal due to laboratory testing. Testing is now complete and disposal of biosolids will be scheduled in the third and fourth quarters.

- ***Utilities*** – This category expended $5.1 million or 48.8% of the budget. The slight favorable variance was due to reduced purchases of generated power due to fuel cell maintenance during the first two quarters. Grid electricity usage was higher but was offset by the second quarter average of $0.116/kWh compared to the budgeted rate of $0.120/kWh. Also reducing the overall category variance was natural gas expense with the rate averaging $0.503/therm compared to the budgeted rate of $0.80/therm.

- ***Capital*** - Total project expenditures through the end of the second quarter were $20.4 million or 39.1% of the $52.2 million amended budget. Approximately 54.4% of the quarter to date project costs are related to Recycled Water and 33.8% are related to Regional Wastewater capital pr

- ***Debt Service*** – Total financial and debt service expenses were $28.4 million or 68.4% of the $41.6 million budget through the second quarter, mainly due to the timing of the debt repayment such as the 2005A Bond retirement of $16.2 million paid in November. Interest rate for the 2008B Variable Rate Demands Bonds continues to stay below the budgeted 1% rate, the average year to date actual rate is .046%.

More detailed explanations of significant revenue and expenses are included in the attached Exhibit A.

FUND BALANCES AND RESERVES

Total fund balance for the year ended June 30, 2014 was $151.1 million. The net result through the end of the second quarter is a decrease in total fund balance of $20.0 million resulting in an ending fund balance of $131.1 million.

GOALS AND OBJECTIVES

Exhibit B provides information on division and related department goals and objectives and the status of each through the end of the second quarter. The goals and objectives indicators are measures used to track the volume and complexity of work by type and to track the effort invested to accomplish that work. Staff will use the indicators to justify current resource allocations, requests for additional resources or re-allocation of staff and to track productivity.

BUDGET TRANSFERS AND AMENDMENTS

Exhibit C presents a summary of O&M budget transfers, total of $31,000, approved by management during the second quarter. Exhibit D includes a list of budget transfers and amendments between capital and O&M projects by fund. Total capital project budget transfers of $3.0 million were completed in the second quarter. The Regional Operations (RO) fund requested $1.8 million, Regional Capital (RC) fund requested $0.4 million, Recycled Water (WC) fund requested $0.4 million, and the remaining transfers were requested by the General Administrative

(GG) and the Non-Reclaimable (NC) funds. Total O&M project budget transfers of $0.5 million were primarily in RO ($0.2 million) and WW Funds ($0.1 million).

Additionally, FY 2014/15 Adopted Budget included $400,000 of General Manager (GM) Contingency Account in the RO Fund and $100,000 in the GG Fund to support unexpected and necessary expenses. As of the end of first quarter, $100,000 from GG Fund and $84,000 from RO Fund of the GM Contingency Account has been utilized to support the following activities: $53,000 for the Water Discovery program, $50,000 for WateReuse Research Foundation pledge, $50,000 to cover fees related to the MWH TCE feasibility study, $1,000 to cover labor related to the Wastewater Facilities Update and CEQA project, and $30,000 in legal litigation.

The budget variance analysis report is consistent with the Agency's business goal of *Fiscal Responsibility*; to demonstrate the Agency appropriately funded operational, maintenance, and capital costs.

PRIOR BOARD ACTION

The Board reviewed the Agency's variance report for FY 2014/15 First Quarter Ending September 30, 2014, on December 17, 2014.

IMPACT ON BUDGET

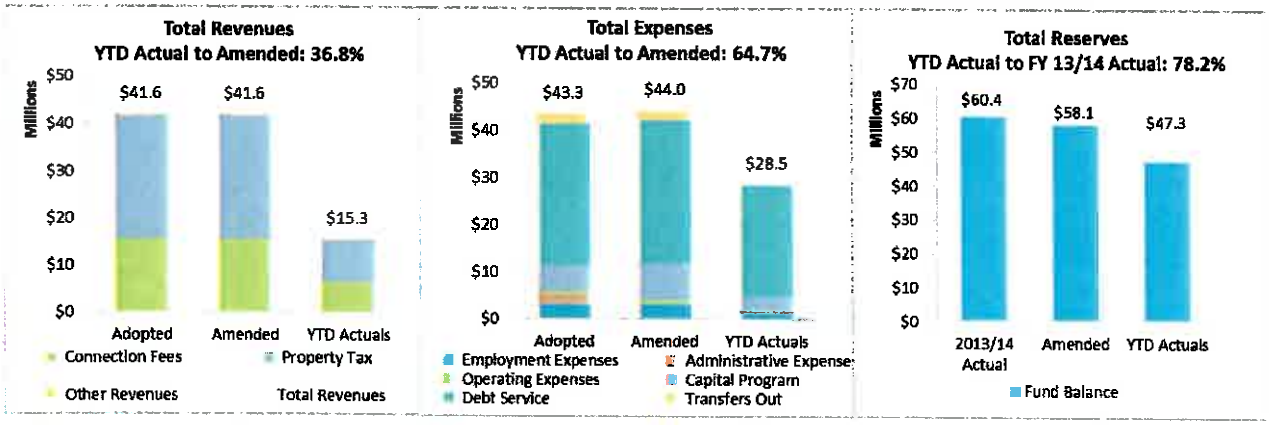
The net shortfall in total revenues over total expenses in the amount of $20.0 million results in a total estimated fund balance of $131.1 million in quarter ended December 31, 2014.

Attachment A:
FY 2014/15 Financial Overview of Agency's programs

FY 2014/15 Total Revenues, Expenses, and Fund Balance -

Regional Wastewater Capital Improvement (RC) Fund

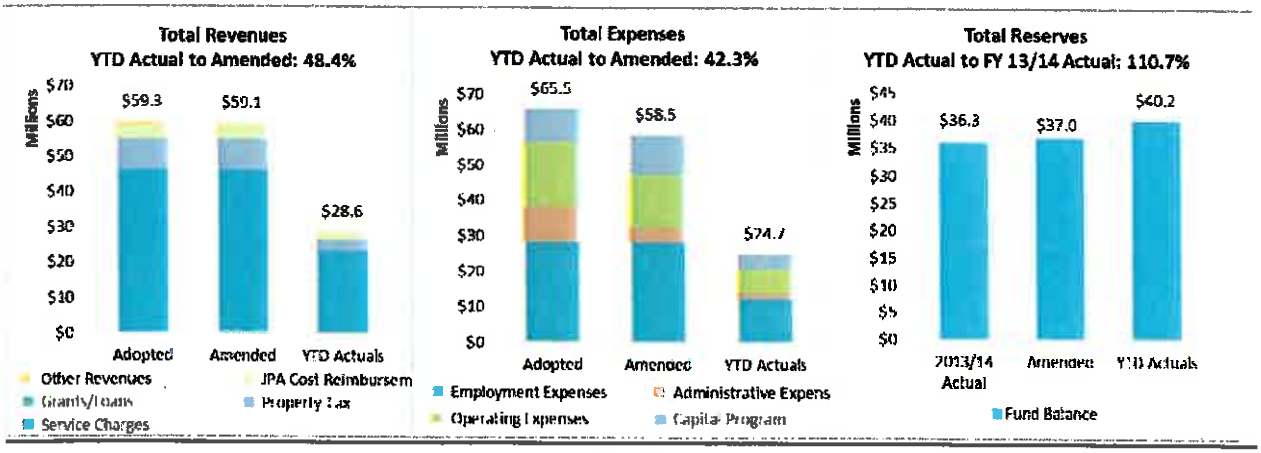
- Second quarter year-to-date fund balance decrease of $13.1 million compared to the FY 2013/14 ending fund balance was primarily due to payment of the 2005A Revenue Bond retirement paid November 2014, coupled with low property tax revenue receipts in the first half of the fiscal year.



FY 2014/15 Total Revenues, Expenses, and Fund Balance –

Regional Wastewater Operations and Maintenance (RO) Fund

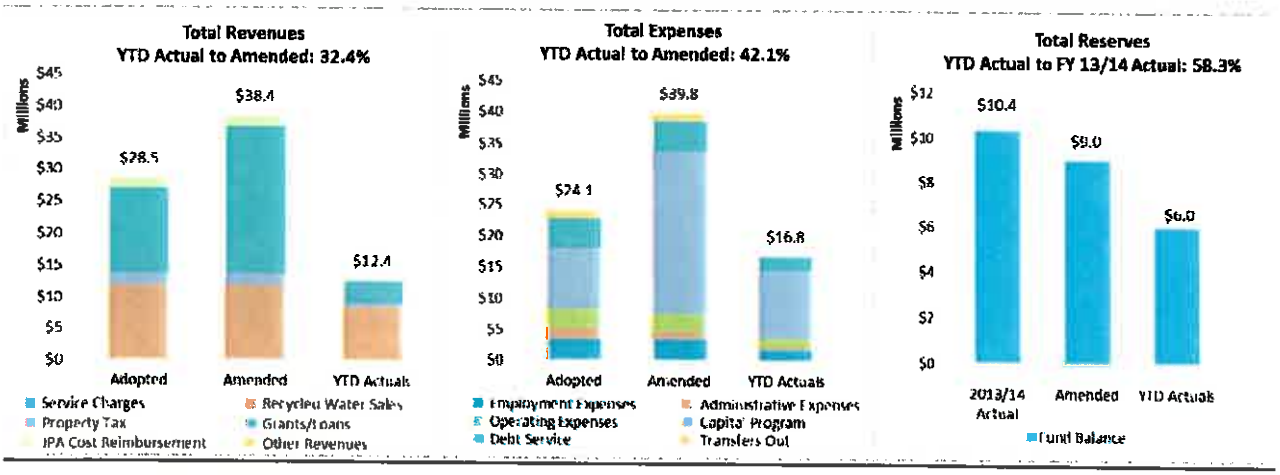
- Second quarter year-to-date fund balance increase of $3.9 million compared to the FY 2013/14 ending fund balance was primarily due to delayed execution of capital Replacement and Rehabilitation (R&R) and O&M projects.



FY 2014/15 Total Revenues, Expenses, and Fund Balance –

Recycled Water (WC) Fund

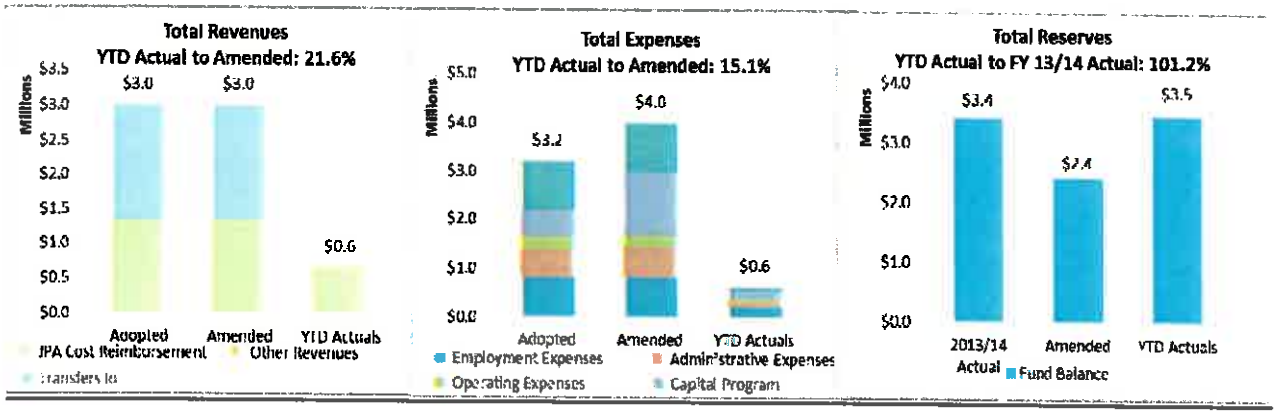
- Second quarter year-to-date fund balance decrease of $4.4 million compared to the FY 2013/14 ending fund balance was primarily due to timing of the property tax revenue and lower SRF loan receipts due to delays in Central/Wineville project costs.



FY 2014/15 Total Revenues, Expenses, and Fund Balance –

Recharge Water (RW) Fund

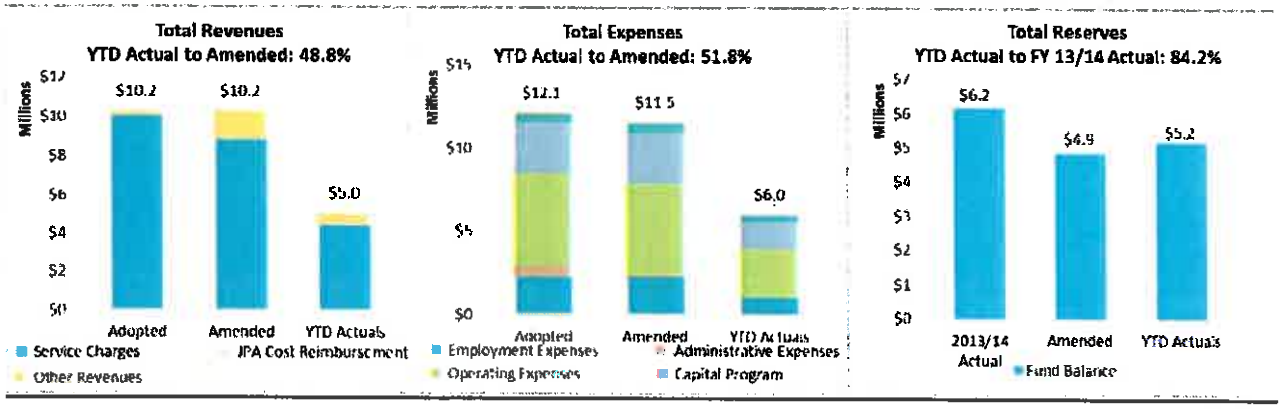
- Second quarter year-to-date fund balance increase of $0.1 million compared to the FY 2013/14 ending fund balance, was due to lower capital and debt service costs.



FY 2014/15 Total Revenues, Expenses, and Fund Balance –

Non-Reclaimable Wastewater (NC) Fund

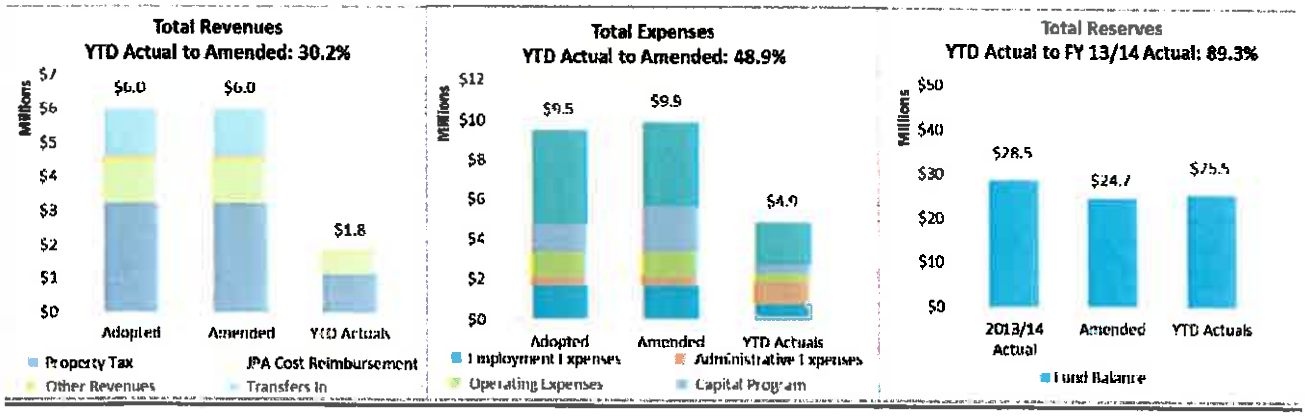
- Second quarter year-to-date fund balance decrease of $1.0 million compared to the FY 2013/14 ending fund balance was primarily due to lower capital and O&M expense in the first half of the fiscal year.



FY 2014/15 Total Revenues, Expenses, and Fund Balance –

Administrative Services (GG) Fund

- Second quarter year-to-date fund balance decrease of $3.0 million compared to the FY 2013/14 ending fund balance was primarily due to the timing of property tax receipts, which is the key revenue source for this fund, will be received in quarters three and four.



FY 2014/15 Total Revenues, Expenses, and Fund Balance –

Water Resources (WW) Fund

- Second quarter year-to-date fund balance increase of $0.1 million compared to the FY 2013/14 ending fund balance was primarily due to contributions and sponsorships expense and other contract service expense not being fully utilized during the first two quarters. An increase in both expense items are projected bringing them in-line with budget in the following quarters.

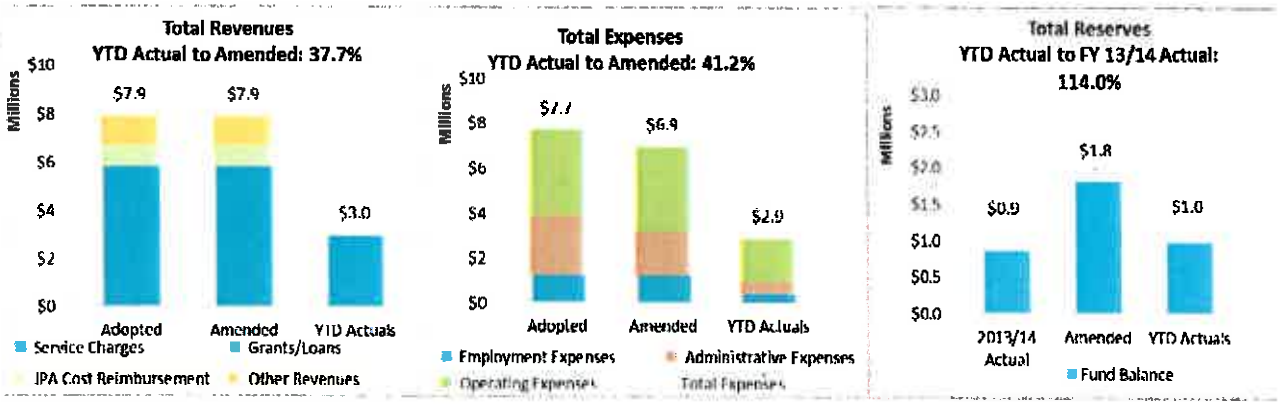


EXHIBIT A

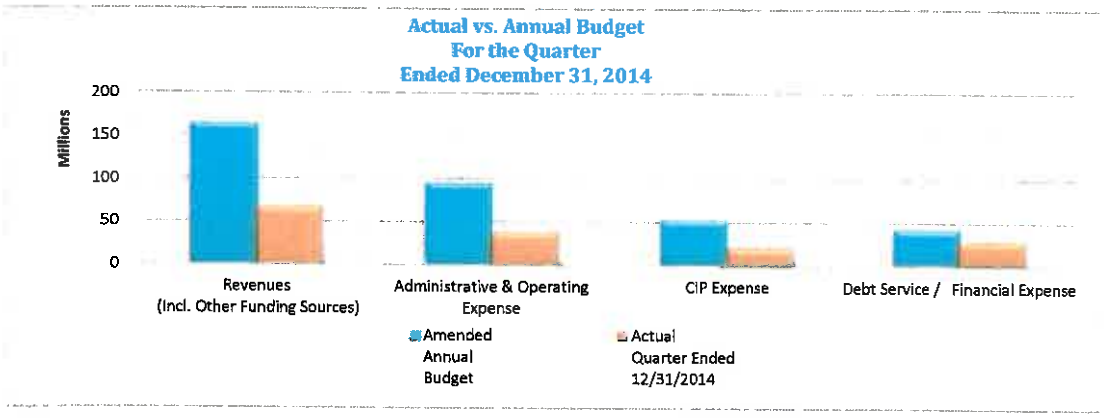
I. Actual vs. Budget Summary:

Second Quarter December 31, 2014

% of the Year Elapsed: 50%

	Adopted Annual Budget	Amended Annual Budget	Actual Quarter Ended 12/31/2014	Amended vs. Actual	% of Amended Budget
Operating Revenues	$82,996,623	$82,996,625	$42,969,277	(40,027,348)	51.8%
Non-Operating (Other Sources of Fund)	70,436,544	80,558,184	23,823,313	(56,734,871)	29.6%
TOTAL FUNDING SOURCES	153,433,167	163,554,809	66,792,590	(96,762,219)	40.8%
Administrative & Operating Expense	(91,015,073)	(95,062,947)	(37,612,332)	57,450,614	39.6%
CIP Expense	(29,314,800)	(52,240,546)	(20,412,783)	31,827,763	39.1%
Debt Service / Financial Expense	(41,966,339)	(41,966,339)	(28,794,777)	13,171,562	68.6%
TOTAL USES OF FUNDS	(162,296,212)	(189,269,831)	(86,819,892)	102,449,939	45.9%
Surplus/(Deficit)	(8,863,045)	(25,715,022)	(20,027,301)	5,687,720	77.9%



2. Actual Revenue vs. Budget:

	Adopted Annual Budget	Amended Annual Budget	Actual Quarter Ended 12/31/2014	Amended vs. Actual	% of Amended Budget
					% of the Year Elapsed: 50%
Operating Revenues:					
User Charges	$61,812,614	$61,812,614	$30,759,831	$31,052,783	49.8%
Recycled Water Sales	9,502,500	9,502,502	6,488,903	3,013,599	68.3%
MWD LPP Rebate	2,079,000	2,079,000	1,802,431	276,569	86.7%
Property Tax - O&M	3,216,278	3,216,278	1,105,602	2,110,676	34.4%
Cost Reimbursement	5,437,786	5,437,786	2,614,330	2,823,456	48.1%
Interest	948,445	948,445	198,181	750,264	20.9%
OPERATING REVENUES	82,996,623	82,996,625	42,969,277	40,027,348	51.8%
Non-Operating Revenues:					
Property Tax - Debt, Capital, Reserves	$36,987,196	$36,987,196	$12,714,420	$24,272,776	34.4%
Connection Fees	$15,321,000	$15,320,999	$6,273,882	$9,047,117	40.9%
Grants & Loans	13,394,355	23,301,249	3,511,828	19,789,421	15.1%
Other Revenue	4,733,993	4,948,740	1,323,184	3,625,556	26.7%
NON-OPERATING REVENUES	70,436,544	80,558,184	23,823,313	56,734,871	29.6%
Total Revenues	$153,433,167	$163,554,809	$66,792,590	$96,762,219	40.8%

User Charges User charges were $30.7 million, or 49.8% of the Amended Budget. This category includes EDU volumetric fees of $24.2 million, $3.6 million Non-Reclaimable wastewater fees paid by industrial and commercial users connected to the brine line system; $2.4 million for water meter service charge to meet our Readiness-to-Serve obligation from MWD and water use efficiency programs; and $0.5 million for imported potable water surcharge.

Property Tax/ AdValorem General ad-valorem property tax receipts from the San Bernardino County Tax Assessor are $13.8 million, or 34.4% of budget for the second quarter. RDA pass through payments are due from the County in January and June.

Recycled Water Sales Actual direct and recharged recycled sales water at the end of the second quarter were $6.5 million or 68.3% of budget. 14,556 AF of Direct delivery and 4,781 AF GWR delivery. Total deliveries of 19,337 AF compares favorably to the direct and recharge recycled water budget of 32,000 AF. A wet winter season may impact future deliveries due to reduced demand for recycled water and limit the recharge deliveries to groundwater basins.

Interest Income Interest Income is approximately 20.9% of the annual budget due to a lower interest rate of return of .046% compared to the budgeted interest rate of .50%.

MWD LPP Rebates MWD LPP rebate is budgeted at $2.1 million or $154/AF for direct recycled water deliveries up to 17,000 AFY, excluding the initial 3,500 AFY. Total rebate revenue is $1.8 million for 11,704 AF of credit, or 86.7% of total budget through the second quarter.

Connection Fees Member agencies reported a total of 1,231 new connections, $6.3 million in new EDU connection fees or 40.9% of budget. compared to the annual budget of $15.3 million (3,000 new EDU connections).

Grants and Loans	Total receipts were $3.5 million or 15.1% of the budget, $0.2 million grants and $3.3 million of loan proceeds from SWRCB for the Recycled Water Southern and Central/Wineville Area projects. Amended budget of $23.3 million consists of $20.0 million from the Clean Water State Revolving Fund (CWSRF) Program and $3.3 million from SWRCB/USBR Water Recycling Program for the Southern and Central/Wineville Area projects.
Cost Reimbursements JPA	Total cost reimbursements were $2.6 million or 48.1% of the annual budget. Category actual includes reimbursements of $1.7 million from the Inland Empire Regional Composting Authority (IERCA), $0.7 million from Chino Basin Desalter Authority (CDA), and $0.2 million from Chino Basin Watermaster (CBWM). Total cost reimbursement budget of $5.4 million, includes $1.2 million from CDA, $3.5 million from IERCA, and $0.7 million from CBWM for the O&M portion.
Other Revenues	Total other revenues were $1.3 million or 26.7% of the annual budget. Revenues include $0.6 million for the recovery of the deferred 4R capital charges from Non-Reclaimable (NC) fund and $0.2 million from lease revenue for the RP-5 Solids Handling Facility, $0.5 million for items such as project cost reimbursements, energy rebates and gain on the sale of assets. The total other revenue budget of $2.9 million, includes $1.2 million from Non-Reclaimable Wastewater Fund (NC), $1.2 million inter-fund loan transfer from Water Resource (WW) fund, and $0.5 million of annual lease revenue.

3. Actual Operating and Capital Expense vs. Budget:

	Adopted Annual Budget	Amended Annual Budget	Actual Quarter Ended 12/31/2014	Amended vs. Actual	% of the Year Elapsed: 50% % of Amended Budget
Operating Expenses:					
Employment	$40,890,683	$40,890,683	$17,794,470	$23,096,213	43.5%
Admin & Operating	50,124,390	54,172,264	19,817,862	$34,354,402	36.6%
OPERATING EXPENSES	$91,015,073	$95,062,947	$37,612,332	$57,450,615	39.6%
Non-Operating Expenses:					
Capital	29,314,800	52,240,546	20,412,783	$31,827,763	39.1%
Debt Service and All Other Expenses	41,966,339	41,966,339	28,794,777	$13,171,562	68.6%
NON-OPERATING EXPENSES	$71,281,139	$94,206,885	$49,207,560	$44,999,325	52.2%
Total Expenses	$162,296,212	$189,269,831	$86,819,892	$102,449,940	45.9%

Employment Expense

Employment - 43.5%

This category includes both wages and benefits. Employment expenses through the second quarter were $17.8 million or approximately 43.5% of Amended Budget. The favorable variance was due to a higher than anticipated vacancy factor. A total of 23 positions were vacant and an additional 15 were on hold at the end of the quarter, equivalent to a 13.1% vacancy factor which exceeds the Agency's budgeted rate of 5.0%.

Administrative & Operating Expense

Office and Administrative - 12.9%

The favorable variance was mainly due to deferral of computer software licensing, office supplies, recruitment expenses, training, travel related expenses, and avoided election expenses. Training in 3rd quarter includes wastewater, contracts and procurement, and operator certification renewals. This category also includes the GM contingency budget which currently has 60% of budget remaining.

Professional Fees & Services - 25.7%

Favorable variance was due to timing of contract services to be performed, in the subsequent months items such as lab sampling, contract labor for services such as aeration system evaluation and foul air flow measurements, cleaning and repair of groundwater basins, headquarter asphalt repair and painting, and heavy operations housekeeping. Other items which account for the favorable variance include: external audit, actuarial services, landscaping, security and computer system support.

Materials & Supplies/Leases/Contribution - 32.9%

The favorable variance was mainly due to the delay of materials and supply purchases. In the following quarters purchases are expected for item such as disaster preparation supplies, promotional items to promote Earth Day and Solar Cup challenge, and purchase of two groundwater field vehicles.

Biosolids Recycling - 42.5%

Favorable variance was due to the delay of disposal of biosolids due to lab testing and cleaning of the digester. Biosolids disposal is currently being scheduled and will take place during the third and fourth quarters.

Chemicals - 41.3%

Chemicals usage was below budgeted projections due to installation of 24 new CL2 analyzers which reduced the need for additional solutions and chemicals, and seasonal variations were responsible for lowered sodium bisulfite usage. Iron sponge media purchases are anticipated to increase in the 3rd and 4th quarters due to the installation of redundant iron sponge tanks at RP-1.

Operating Fees - 53.2%

Operating fees spending is higher than Q2 spending expectations. Due to an increase in TSS and BOD expense in north system. Also contributing to the unfavorable variance, a majority of annual NPDES and AQMD permit fees were paid during the second quarter.

Utilities - 48.8%

Utilities are just slightly below budget as of the end of Q2. Electricity costs were higher than anticipated for the second quarter as purchases from the grid increased due to lower fuel cell PPA purchases which has been under going maintenance during the first two quarters. However, the increased usage was offset by the actual average of $0.116/kWh compared to the budgeted rate of $0.120/kWh. Also offsetting the higher energy costs was natural gas expense, with actual average rate of $0.503/therm compared to the budgeted rate of $0.80/therm.

Special and Reimbursable Projects - 10.1% and 22%

Special and reimbursable project expenditures are below budget. Combined actual costs were $1.1 million or 12.7% of the amended budget of $8.5 million. The table below provides a summary of the major projects and current status.

Financial Expenses

Financial Expense - 68.4%

Total debt service and financial expenses were $28.4 million through the second quarter, the variance is mainly due to the timing of debt repayment. During the second quarter, the final installment of $16.2 million was paid to retire the 2005A bonds, resulting in the over budget status of this category. The category is expected to remain slightly below budget in the final quarter of the year if the interest rate on the 2008B Variable Rate Demand Bonds continues to stay below the 1% budgeted rate, the average year to date actual rate is 0.046%.

Capital Expense

Capital Costs - 39.1%

Capital expenditures through the second quarter were approximately $20.4 million. Recycled Water projects accounted for approximately 54.4% of costs through the second quarter and 33.8% are related to Regional Wastewater projects. Listed below is a brief status report on some of the major projects currently under construction.

Summary of major capital and special project expenses and status as of December 31, 2014

Capital Project		Amended FY 2014/15	YTD Expenditure	Budgeted Amount Remaining
EN13023	**930 Zone Recycled Water Reservoir**	**Capital Projects**	**5,999,432**	**1,530,312**
	80% of the budget was expended by the end of the second quarter. The purpose of the project is to provide storage in the Southern Service Area and increase pump station capacities. Currently the project is in construction. Last month sewer repair, appurtenances, and street resurfacing on Foxglove were completed. All construction is complete, currently final testing us underway, the project is scheduled to be complete in March 2015.			
EN13038	**RP-1 Outfall Relocation & Upsizing**	**Capital Projects**	**12,457**	**5,187,543**
	Less than 1% of the budget was expended by the end of the second quarter. This project includes the relocation of an existing 30-inch RP-1 Outfall recycled water pipeline outside of its easement into public right-of-way. Due to increasing capacity demand from the City of Ontario, the pipeline will be upgraded to a 72-inch pipeline. Pipe delivery and excavation and grading are to be complete in January, project is expected to be completed in June 2015.			
EN06025	**Wineville Extension Recycled Water Pipeline**	**Capital Projects**	**2,242,658**	**994,092**
	69% of the budget was expended by the end of the second quarter, a budget is expected to go to the Board in February in anticipated of heavy construction activities. The project is to construct a 24 and 20 inch recycled water pipeline from the Wineville Recycled Water Pipeline at Jurupa and Wineville to the RP-3 basins at Beech and Jurupa. The pipeline is located in the cities of Ontario and Fontana. The project consists of approximately 24,000 lineal feet of pipe and will serve recycled water customers as well as provide recycled water for ground water recharge at the RP-3 and Declez Basins. Construction and permitting are currently underway for this project and the project is estimated to be completed in July 2015.			
EN13045	**Wineville Extension Recycled Water Pipeline Segment B**	**Capital Projects**	**417,839**	**2,582,161**
	14% of the budget was expended by the end of the second quarter. The project involves the installation of 2.8 miles of 30" recycled water pipeline in addition to the associated appurtenances. This project is in conjunction with EN06025. Currently permitting and construction are in progress. In December notification to residents and pipe delivery along Marlay was completed, during January installation of pipe is expected. This project is estimated to be complete in July 2015.			
EN13054	**Montclair Lift Station Upgrades**	**Capital Projects**	**467,920**	**2,109,911**
	18% of the budget was expended by the end of the second quarter. The project will work to eliminate the ragging problem at the Montclair Pump Station that arose due to additional flow diverted to RP-1. The project is currently in the construction phase. HVAC redesign has been completed and the complete bypass and outage plan is being finalized. Coordination with SCE should result in an early SCE cut-over. Construction is projected to be finished in March 2015.			
EN11035	**Philadelphia Pump Station Upgrades**	**Capital Projects**	**1,232,262**	**178,480**
	87% of the budget was expended by the end of the second quarter. The project will mitigate problems at the pump station including walls and floor surfaces that will be recoated with a strong resin. Construction in complete and thirty day operational tests are being performed. Project completion is expected in February 2015.			
EN14012	**RP-2 Drying Beds Rehabilitation**	**Capital Projects**	**326,719**	**951,560**
	26% of the budget was expended by the end of the second quarter. The project includes the design, procurement, and installation of drying bed improvements and temporary provisions for dewatering. The project is currently in construction and recent activities include grading of the west side drying beds, projects expected to be completed by April 2015.			

O&M & Reimbursable Projects		Amended FY 2014/15	YTD Expenditure	Budgeted Amount Remaining
WR15022	**Water Use Assessments**	**O&M Projects**	-	**800,000**
	0% of the budget was expended by the end of the second quarter. A DWR grant, to help offset costs, is expected to be awarded sometime between March and June 2015 once the grant has been approved the project is expected to begin. The project will identify water efficiency programs and tools to evaluate municipal water use assessments. This will help identify high water users to target with necessary conservation programs.			
PA15001	**Underground Piping Rehabilitation**	**O&M Projects**	-	**500,000**
	0% of the budget was expended by the end of the second quarter. This project is an annual appropriation for the rehabilitation or repair of the Agency's underground assets. This includes pipes vaults, channels, and process galleries.			
EP15001	**RP-1/RP-2 Digester Cleaning Project**	**O&M Projects**	-	**630,000**
	0% of the budget was expended by the end of the second quarter. The project involves the removal of solids from Wastewater Treatment Facility Digesters to allow for better processing, a reduction of equipment failures, and improvement in process performance. Digester cleaning services contract will be awarded in February 2015 with estimated project completion by fiscal year end.			
WR15005	**Residential Landscape Device Retrofit**	**Reimbursable Proje**	**81,840**	**318,160**
	20% of the budget was expended by the end of the second quarter. This program is a continuation of the regional landscape audit and monitoring program. The project is a grant-funded program from SAWPA / DWR. New work for the project began in July, and to date there have been 103 sites retrofitted with 158 weather-based irrigation controllers and 2,179 high efficiency nozzles installed. The Residential Landscape Device Retrofit program will continue through FY 2016/17.			
WR14003	**Wastewater Facilities Update and CEQA**	**O&M Projects**	**214,659**	**187,044**
	53% of the budget was expended by the end of the second quarter. The project includes analysis on future uses of RP-2 and RP-5 solids handling facilities and expansion to the WWTPs, the Recycled Water Program, Recharge Program, Energy Program, and Water Resources Program.			

INLAND EMPIRE UTILITIES AGENCY

Fiscal Year 2014/15

CONSOLIDATED BUDGET VARIANCE ANALYSIS REPORT

Second Quarter December 31, 2014

	Adopted FY 2014/15 Annual Budget	Amended FY 2014/15 Annual Budget	YTD Actual	YTD Variance	YTD % Budget Used
OPERATING REVENUES					
User Charges	$61,812,614	$61,812,614	$30,759,831	($31,052,783)	49.8%

Contracts and Facilities Services														
10	FY 2014/15	Quarterly	Finance and Administration	A	Continue commitment to cost containment for operating and capital costs	Maintain competitive purchasing programs consistent with the Agency Procurement Ordinance.	June-2015	Increase of 5% in cost savings	Warren Green	January	2015	On Schedule	No	Cost savings of $202,244 was realized in the second quarter of FY 2014/15.
25	FY 2014/15	Quarterly	Finance and Administration	A	Conduct or participate in a consortium to compile performance measures for agencies across the state that will serve as a benchmarking tool to drive awareness of strengths and opportunities for improvement by June 2016	Expand best management practices in the contract and procurement processes.	June-2015	Increase in performance measurements.	Warren Green	January	2015	On Schedule	No	Staff attended the cooperative purchasing meeting on October 14, 2014, hosted by EMWD. Staff benchmarked Planning, Engineering and Maintenance staff to identify items that might fit with a cooperative purchase. A follow-up meeting is set for January 19, 2015, at IEUA's Event Center.
25	FY 2014/15	Quarterly	Finance and Administration	A	Conduct or participate in a consortium to compile performance measures for agencies across the state that will serve as a benchmarking tool to drive awareness of strengths and opportunities for improvement by June 2016	Expand best management practices in the contract and procurement processes.	June-2015	Increase in performance measurements.	Warren Green	January	2015	On Schedule	No	Approximately 94 percent of purchase orders issued during the first half of FY 2014/15 were processed within CAPs service level objectives lead-time.
69	FY 2014/15	Quarterly	Finance and Administration	C	Identify and participate in organizations that advance the Agency's mission, vision and key initiative	Continue to network with professional groups for the respected areas of CFM.	July-2015	Attend at least 5 training sessions/meetings for CAPPO and ARMA.	Warren Green	January	2015	On Schedule	No	CFS staff continues to participate in their professional associateions: attending relevant training when practical to ensure staff keeps up with best practices.
19	FY 2014/15	Quarterly	Finance and Administration	A	Transition to a biennial budget beginning July 1, 2015	Establish new contracts and amendments to emphasize multi-year fixed price terms.	July-2015	50% of newly issued applicable contracts	Warren Green	January	2015	On Schedule	No	
19	FY 2014/15	Quarterly	Finance and Administration	A	Transition to a biennial budget beginning July 1, 2015	Establish new contracts and amendments to emphasize multi-year fixed price terms.	July-2015	50% of newly issued applicable contracts	Warren Green	January	2015	On Schedule	No	Contracts staff continues to discuss the benefits of managed spend with our customers; seeking longer term, multi-year fixed priced contracts. Staff negotiated several amendment extensions through December 2016, over the last quarter.

Goal ID	FY Start	Reporting Required	Division	Bus. Goal	Work Plan	Department Goal	Time Line	KPI	Assigned To	Note Month	Note Year	Status	Complete	Notes
103	FY 2014/15	Quarterly	Finance and Administration	F	Ensure Agency programs promote environmental stewardship, sustainability, and preservation of heritage measures, utilizing green procurement and reuse of surplus materials, equipment, and parts when possible	Identify educational opportunities for environmentally friendly facilities and landscapes.	June-2015	Increase educational signage for Agency facilities where accessible by the public by 15%.	Warren Green	January	2015	On Schedule	No	Signage is being identified for the park in partnership with the External Affairs Department for the Water Discovery Program and public tours. This will be a multi-phase project that will lead into the next fiscal year. Signage for the new HQ A frontage landscape is being determined and will be reviewed by the External Affairs Department. Regional Plant No.5 frontage will have new location signage to stay consistent with the current aesthetic from Regional Plant No.4. This design will be incorporated into the Beautification Project benchmark. Partnered with the External Affiars Department to create educational signage for the Regional Plant No. 5 for educational tours.
105	FY 2014/15	Quarterly	Finance and Administration	B	Ensure staff understands and upholds their role in achieving the Agency's Mission, Vision, and Values	Conduct Agency training on department processes that are in line with the Agency's MVV's.		Conduct at least 3 sessions for 3 related topics.	Warren Green	January	2015	On Schedule	No	Staff has completed training on the Email Management through Managed Folders. RM staff is on target for the 3/15/2015 "Go Live" target date.
105	FY 2014/15	Quarterly	Finance and Administration	B	Ensure staff understands and upholds their role in achieving the Agency's Mission, Vision, and Values	Conduct Agency training on department processes that are in line with the Agency's MVV's.		Conduct at least 3 sessions for 3 related topics.	Warren Green	January	2015	On Schedule	No	Staff is collaborating with Maintenance to deliver refresher training and lesson's learned from recent procurements.
108	FY 2014/15	Quarterly	Finance and Administration	C	Replace the legacy Document Management System to ensure it meets Agency-wide and regulatory public records requirements and eliminates redundant archiving systems by December 2015	Implement the new Document Management System and the Agency's taxonomy.	July-2016	Reduce time spent on production of records by improving the location and retrieval time by 20%.	Warren Green	January	2015	On Schedule	No	The RFP review of consultants for the ECM project has begun.Consultant scheduled to begin ECM project roadmap on March 9th. RM staff will present Taxonomy project to Agency managers at the managers meeting in February.
112	FY 2014/15	Quarterly	Finance and Administration	F	Develop a communication plan to promote being a good neighbor by June 2015	Ensure all current and future landscaping, and new facilities are in cooperation with current LEED and water-efficiency programs and advancements.	June-2015	100% of new landscaping design and material, along with facility design are measured against programs.	Warren Green	January	2015	On Schedule	No	The Agency-wide Beautification project is moving forward with RP-4 portion getting completed to meet the projects standards. The design and install of the new water-efficient landscape for HQ A was completed in December 2014. The RP-5 water-efficient landscape design is 70% complete with the first review completed by internal staff stakeholders.

Engineering

95	FY 2014/15	Quarterly	Engineering, Planning and Science	E	Provide engineers training to understand business aspects of capital projects and increase engineering consultant design services in lieu of in-house designs to complete more projects in a shorter timeframe by July 2015	Provide high quality project management for the completion of Capital Improvement Projects	FY 2014/15	Design Schedule on time >=80% Complete Construction Schedule on time >=80% Project Costs within initial Total Project Budget >=90% Project Costs within Initial Fiscal year Project Budget >=90% All Expenditures as a Percentage of Forecasted Expenditures >=90% Change Orders as a percentage of initial contract award value<=10%	Majid Karim	January	2015	On Schedule	No	Completed Design Schedule on time = 75%, Completed Construction Schedule on time = 77% Project, Costs within initial Total Project Budget = 86%, Project Costs within Initial Fiscal year Project Budget 29%, All Expenditures as a Percentage of Forecasted Expenditures =74%, Change Orders as a percentage of initial contract award value = 15%
2	FY 2014/15	Monthly	Engineering, Planning and Science	E	Conduct Lesson's Learned sessions to evaluate key construction implementations	Review and evaluate all projects for best practices that can be applied to future projects	Monthly	10x/year>=90%	Majid Karim	January	2015	On Schedule	No	1 Session: RP2 Digester No 4 Dome Improvements, Gary Dix
Finance and Accounting														
6	FY 2014/15	Quarterly	Finance and Administration	A	Integrate projects identified in the long range financial planning documents, such as the Facilities Wastewater Master Plan, Technology Master Plan, Energy Plan, and the Integrated Resources Plan, into the operating and capital budget by July 2016	Work with pertinent departments in identifying projects from various master plan and integrated into the respective program budget	December - April	None	Javier Chagoyen -	January	2015	On Schedule	No	Worked with Planning and Compliance Department and consultants in the development of Water rate structure, reviewing and analyzing data and reports provided by consultants
8	FY 2014/15	Quarterly	Finance and Administration	A	Continue commitment to cost containment for operating and capital costs	Collaborate with various department in identifying cost containment items and monitoring the performance through regular budget variance review	Throughout the fiscal year	None	Javier Chagoyen -	January	2015	On Schedule	No	Reviewed with Division/departments on FY 2014/15 First quarter budget variances and presented the analysis report to the board in December 2014
Internal Audit														
12	FY 2014/15	Quarterly	Agency Management	A	Continue commitment to cost containment for operating and capital costs	Promote a strong control environment by conducting independent and objective audits of Agency operations where the focus and audit scope includes identifying areas and providing recommendations for cost containment, effectiveness and efficiency in operations and opportunities to improve and areas of cost	On-going and through the audits approved by the Audit Committee and the Board during the Annual Audit Plan presentation	Completed planned and scheduled audits. Feedback from stakeholders.	Teresa Velarde	January	2015	On Schedule	No	Completed scheduled audits and On-going. Audits approved by the Board through the Annual Audit Plan are in progress as scheduled.

Goal ID	FY Start	Reporting Required	Division	Bus. Goal	Work Plan	Department Goal	Time Line	KPI	Assigned To	Note Month	Note Year	Status	Complete	Notes
16	FY 2014/15	Quarterly	Agency Management	A	Amend the Regional Sewerage Service Contract to provide more flexibility in the use of property taxes by July 2015	Complete the Regional Contract Review and provide recommendations to improve the consistent and fair application of the Regional Contract requirements among all Regional Contract Agencies. Additionally, provide recommendations to Agency management to improve and clarify clauses and requirements of the contract to negotiate a new contract going forward. Complete the evaluation of the connection and monthly sewer rate calculations, as well as Exhibit J application, as well as RCA's internal processes and procedures, supporting documentation to determine if these meet the intent and requirements of the contract.	Complete by December 2014.	Board of Director filing of the final report by December 2014.	Teresa Velarde	January	2015	On Schedule	No	On-Schedule and on-going. Completed 4 of the 7 member agency audits and have documented results in audit reports submitted to the Board and Executive Management. Continuously provide updates and information related to audit findings. IA continues to work with the remaining 3 member agencies.
34	FY 2014/15	Quarterly	Agency Management	B	Ensure staff understands and upholds their role in achieving the Agency's Mission, Vision, and Values	Promote a strong control environment by conducting independent, objective audits of Agency operations where the scope of the audits incorporate evaluating that Agency processes and systems comply with the Agency's Mission, Vision, Values, best practice operations, processes and programs, as well as senior management input, as the criteria against which to measure performance and results. Internal Audits are to provide an independent and objective opinion, and feedback on how closely the criteria, Agency policies, procedures, including Mission, Vision and Values are met, followed or understood. Provide recommendations to the appropriate personnel where to address gaps identified.	On-going. Through the audits approved by the Audit Committee and the Board	Feedback from auditees, senior/Executive Management, the Audit Committee Advisor, and the Audit Committee and/or Board of Directors.	Teresa Velarde	January	2015	On Schedule	No	IA has 3 professional senior-level internal auditors that uphold the values of the Institute of Internal Auditors and the values of IEUA. Internal Audits are to provide an independent and objective opinion, and feedback on how closely the criteria, Agency policies, procedures, including Mission, Vision and Values are met, followed or understood. Provide recommendations to the appropriate personnel where to address gaps identified.

Goal ID	FY Start	Reporting Required	Division	Bus. Goal	Work Plan	Department Goal	Time Line	KPI	Assigned To	Note Month	Note Year	Status	Complete	Notes
35	FY 2014/15	Quarterly	Agency Management	B	Ensure staff understands and upholds their role in achieving the Agency's Mission, Vision, and Values	Consult and assist all levels of staff, management and Executive Management by providing audit recommendations to improve efficiencies and comply with Agency policies and procedures, as well as for improvement of practices, to strengthen controls, and incorporate best practices. Assist in providing training or coordinating roundtable discussions with the necessary levels of staff.	On-going. Through the audits approved by the Audit Committee and the Board	Feedback from auditees, senior/Executive Management, the Audit Committee Advisor, and the Audit Committee and/or Board of Directors.	Teresa Velarde	January	2015	On Schedule	No	The IAD is composed of very professional auditors that understand the value of the work and quality of work to the organizations. Internal auditors consult and assist all levels of staff, management and Executive Management by providing audit recommendations to improve efficiencies and comply with Agency policies and procedures, as well as for improvement of practices, to strengthen controls, and incorporate best practices. Assist in providing training or coordinating roundtable discussions with the necessary levels of staff.
38	FY 2014/15	Quarterly	Agency Management	B	Develop a plan to conduct a feedback study to measure employee satisfaction by December 2014	Perform a survey of auditee/customer satisfaction at the conclusion of each audit project to gather information about auditor involvement, professionalism, knowledge and ability to communicate to gain information on continuous improvement.	After each completed audit/project.	Feedback from customers.	Teresa Velarde	January	2015	On Schedule	No	After each audit, hold discussions with the auditees. Quarterly, make presentations to the Audit Committee and assess their satisfaction with the audit results through the discussions.
44	FY 2014/15	Quarterly	Agency Management	B	Uphold a strong internal control environment by conducting independent objective internal and external audits of Agency finances and operations	Per direction or approval by the Audit Committee and Board, and through coordination with senior management, Internal Audit would identify areas "program audits" or areas for audit where the goal and scope are to measure the performance of a program, a process, or a service or compare results to program goals and identify areas for improvement, and make recommendations to improve efficiencies.	Ongoing and through approved audits as approved through the Annual Audit Plan.	Completed audits and feedback from stakeholders.	Teresa Velarde	January	2015	On Schedule	No	Evaluating risk areas and planning/scheduling audits is an on-going process. Per direction or approval by the Audit Committee and Board, and through coordination with senior management, Internal Audit identify areas for audit where the goal and scope are to measure the performance of a program, a process, or a service or compare results to program goals and identify areas for improvement, and make recommendations to improve efficiencies.

Goal ID	FY Start	Reporting Required	Division	Bus. Goal	Work Plan	Department Goal	Time Line	KPI	Assigned To	Note Month	Note Year	Status	Complete	Notes
21	FY 2014/15	Quarterly	Agency Management	A	Initiate discussions to revise and renew the Regional Sewerage Service Contract set to expire in 2023 by January 2018	Complete the Regional Contract Review and provide recommendations to improve the consistent and fair application of the Regional Contract requirements among all Regional Contract Agencies. Additionally, provide recommendations to Agency management to improve and clarify clauses and requirements of the contract to negotiate a new contract going forward. Complete the evaluation of the connection and monthly sewer rate calculations, as well as Exhibit J application, as well as RCA's internal processes and procedures, supporting documentation to determine if these meet the intent and requirements of the contract.	Complete by December 2014.	Board of Director filing of the final report by December 2014.	Teresa Velarde	January	2015	On Schedule	No	Completed the review of 4 of the 7 member agency and provided to-date, 23 audit recommendations to Executive Management to consider in moving forward with amending the cotnract and in contract administration processes. Continue to work with the remaining 3 member agencies as scheduled.
Laboratory														
9	FY 2014/15	Quarterly	Engineering, Planning and Science	A	Continue commitment to cost containment for operating and capital costs	Evaluate and Implement new technologies for laboratory analyses as they become available.	Ongoing	None	Nel Groenveld	January	2015	On Schedule	No	evaluating BOD calculation option for LIMS
147	FY 2014/15	Once Complete	Engineering, Planning and Science	B	Promote a safer work environment by administering and monitoring required safety and regulatory trainings	Meet the bi-weekly safety tailgate meeting requirement.	All required topics completed by each December.	Document training	Nel Groenveld	January	2015	On Schedule	No	2014 safety tailgates completed by end of calendar year
31	FY 2014/15	Quarterly	Engineering, Planning and Science	A	Annually, promote superior customer service when working internally with colleagues	• Meet efficient and effective sample turnaround times (TAT) • Respond to rush sample requests and special sample requests as needed.	Daily as needed	Compliance results are approved in LIMS within the following TATs: • PTSC: average 20 days • NPDES: 10th of month following receipt of sample • DS-1 & GWR: 10th of month following analyses	Nel Groenveld	January	2015	On Schedule	No	Meeting all targets, PTSC reporting averaging 16 days, data submitted to CDPH and NPDES on time.
Maintenance														
93	FY 2014/15	Quarterly	Operations	E	Ensure reliability of Agency assets by annually implementing the asset management monitoring and assessment program (Asset Management Plan)	Conduct major condition assessments annually	Complete condition n assessment of underground process piping at RP-1 by end of FY14/15 Complete RP-1 headworks condition assessment by end of the second quarter FY14/15	Complete at least five major condition assessments	Francis Concemino	January	2015	On Schedule	No	RP-1 condition assessment will be performed during the RP-1 headworks rehab, which is currently scheduled in April 2015. Condition assessment of major assets at RP-4 is completed. Condition reports expected from the consultants by end of January 2015. Repair or rehab recommendations will be submitted to Technical Services for review and project prioritization in AMP.
Operations														

Goal ID	FY Start	Reporting Required	Division	Bus. Goal	Work Plan	Department Goal	Time Line	KPI	Assigned To	Note Month	Note Year	Status	Complete	Notes
84	FY 2014/15	Quarterly	Operations	D	Develop and implement Recycled Water Peak Demand Management Plan to optimize efficient use of recycled water by June 2015	Develop written RW storage and delivery strategies to meet department forecasts of diurnally variable RW supplies and seasonally variable RW demands.	November-2014	Written strategies and forecasts developed by RW and GWR staff by December 1, 2014	Jason Marseilles	January	2015	Behind Schedule	No	Operational strategies have been created and SOP's are being created. Draft SOP's are anticipated to be distibuted in March 2015 for review by key Agency personnel. Department goal is to have written SOP's for the beginning of the 2015 peak RW season.
85	FY 2014/15	Quarterly	Operations	D	Develop and implement Recycled Water Peak Demand Management Plan to optimize efficient use of recycled water by June 2015	Develop RW GWR SCADA improvements that implement the storage and delivery strategies by working the DCS Department	May-2015	System Improvement request to DCS Department by March 15, 2015	Jason Marseilles	January	2015	On Schedule	No	The RW system has the ability to operate the RP-4 1158 RWPS, RP-1 1158 RWPS, CCWRF 930 RWPS, and RP-5 800 RWPS in level control mode. This maximizes the amount of RW delivered to the RW distribution system. RW staff is reviewing 2014 peak RW demand operations to develop a list of improvement projects. The list will be reviewed internally by key operations staff in March 2015 and then forwarded to DCS for implementation.
86	FY 2014/15	Quarterly	Operations	D	Develop and implement Recycled Water Peak Demand Management Plan to optimize efficient use of recycled water by June 2015	Continue weekly Peak Demand Management Meetings with key operations staff for start of CY2015 Peak Demand season	June 30, 2015	Demand Management meetings scheduled in Outlook by March 31, 2015	Jason Marseilles	January	2015	On Schedule	No	Weekly demand management meetings were held through October 2014 with key operations personnel to ensure maximum operation of all Recycled Water facilities. Weekly demand management meetings will continue in April 2015 in preparation for the 2015 peak demand season.
78	FY 2014/15	Quarterly	Operations	D	Optimize IEUA's use of potable and recycled water by July 2016	Establish potable and recycled water baseline monitoring plan for all Agency facilities.	FY 2014/15	One facility per quarter	Matt Melendrez	January	2015	On Schedule	No	Potable water and utility water flow meters are being monitored for RP-5,CCWRF and RP-2. Capital improvement projects have been established to add utility water flow meters at RP-1 and RP-4.
157	FY 2014/15	Once Complete	Operations	E	Develop a design concept for the proposed South Compost Facility by December 2014	Conduct a feasibility study for the South Compost Facility	Complete feasibility study by September 2014	Not applicable	Jeff Ziegenbein	January	2015	On Schedule	No	South Compost Facility Feasibility Study was completed and submitted in May 2014.
101	FY 2014/15	Quarterly	Operations	F	Annually review and update Key Performance Indicators (KPI's) to monitor and comply with all regulatory requirements	Review and update all facility KPI's	FY 2014/15	1 Facility per Quarter	Chander Letulle	January	2015	On Schedule	No	Operations KPI's for all facilities were reviewed, standardized and updated. All Operations facility KPI's are monitored daily and reviewed monthly to ensure compliance with regulatory requirements and optimization goals.
102	FY 2014/15	Quarterly	Operations	F	Annually review and update the Emergency Response and Operational Plans for all facilities	Support Human Resources and Safety Department in the review and update of the Emergency Response and Operational Plans for all facilities.	FY 2014/15	1 Facility per Quarter	Chander Letulle	January	2015	Behind Schedule	No	Human Resources established completion of this goal for FY 2015/16. Operations facility specific plans are being developed to support the larger Agency wide Emergency Response Plan. The first Operations plan is for RP-1 and it will be completed by March 2015.
98	FY 2014/15	Quarterly	Operations	F	Strive for 100% use of Agency bi-products by 2021	Ensure all treatment standards are met to maximize availability of recycled water	FY 2014/15	Attain 100% NPDES Compliance	Matt Melendrez	January	2015	On Schedule	No	Based on the Engineering, Planning and Science Department's 2014 Environmental Compliance Incident Report all Operations facilities achieved 100% NPDES Compliance and AQMD Compliance for the 2nd Quarter of FY 2014/15.
99	FY 2014/15	Quarterly	Operations	F	Strive for 100% use of Agency bi-products by 2021	Maximize use of biosolids by sending 90% of organics to IERCF	FY 2014/15	Send 90% of organics to IERCF	Matt Melendrez	January	2015	On Schedule	No	Greater than 90% of RP-1 and RP-2 Biosolid loads were sent to IERCF during the 2nd Quarter of FY 2014/15.

Planning and Environmental Compliance

Goal ID	FY Start	Reporting Required	Division	Bus. Goal	Work Plan	Department Goal	Time Line	KPI	Assigned To	Note Month	Note Year	Status	Complete	Notes
100	FY 2014/15	Quarterly	Engineering, Planning and Science	F	Lead efforts to advocate for emerging trends and proposed changes to rules and regulations	Active participation into the legislative process through advise letters, comments,	Ongoing	Participate in local water/wastewater/air regulatory and association committee meetings.	Sylvie Lee	January	2015	On Schedule	No	Actively participating and support comments letters as issues arise through organizations such as WateReuse, ACWA, etc.
96	FY 2014/15	Quarterly	Engineering, Planning and Science	E	Complete an Agency-wide greenhouse gas emission (GHG) baseline assessment using the Climate Registry protocol to allow the Agency to sell credits by July 2016	• Complete GHG emission baseline • Develop GHG reduction plan consistent with the Energy Management Plan • Measure GHG reduction (tons CO2 eq/yr) work plan needs to be reworded - agency does not sell credits	July-2016	Complete the GHG emission baseline July 2014	Sylvie Lee	January	2015	On Schedule	No	Completed
97	FY 2014/15	Quarterly	Engineering, Planning and Science	F	Develop a communication plan to promote being a good neighbor by June 2015	Perform odor monitoring, assist Operations, External Affair during complaints investigation and mitigation	Ongoing	Perform periodic/as needed odor monitoring	Sylvie Lee	January	2015	On Schedule	No	RP-5 SHF odor monitoring conducted weekly
154	FY 2014/15	Once Complete	Engineering, Planning and Science	D	Accelerate implementation of capital projects where appropriate to "drought proof" regional water supplies and optimize use of available federal and state grants and low interest rate financing	Develop project list and implement based on priority	continuous	Keep updated project list and be coordinated with member agencies	Sylvie Lee	January	2015	On Schedule	No	placeholder for identified drought projects titled "local resources resilliency projects" in TYCIP. Dialog to identify and refine projects is ongoing with MA's.
154	FY 2014/15	Once Complete	Engineering, Planning and Science	D	Accelerate implementation of capital projects where appropriate to "drought proof" regional water supplies and optimize use of available federal and state grants and low interest rate financing	Develop project list and implement based on priority	continuous	Keep updated project list and be coordinated with member agencies	Sylvie Lee	January	2015	On Schedule	No	REquest for project updates and review sent to member agencies on 01/06/15
155	FY 2014/15	Once Complete	Engineering, Planning and Science	D	Advocate strategies that help anticipate and mitigate the impacts of droughts and climate change on the region	Develop strategies in the IRP	December-2014	Adoption of IRP; ensure the goals of the 2010 UWMP are met	Sylvie Lee	January	2015	Behind Schedule	No	Estimated completion for IRP is August 2015. Goals and Objectives to be complete by 02/30/15
158	FY 2014/15	Once Complete	Engineering, Planning and Science	F	Complete odor baselines report by June 2015	Coordinate odor survey and develop baseline report	June-2015		Sylvie Lee	January	2015	On Schedule	No	Odor surveys continuing; Odor baseline report in process - draft expected by end of first quarter.
164	FY 2014/15	Once Complete	Engineering, Planning and Science	D	Integrate water supply, water efficiency, storm water management, energy efficiency, water quality and land use measures to promote sustainable watershed management	• Complete Integrated Resources Plan • Complete Water Use Efficiency Business Plan • Complete 2015 Urban Water Management Plan • Coordinate the implementation of Recharge Master Plan Update • Complete the Recycled Water Program Strategy • Complete Wastewater Facilities Master Plan	•Dec 2014 • June 2015 • June 2016 • June 2020 • Sep 2014 • Sep 2014	Completion and coordination of said documents	Sylvie Lee	January	2015	On Schedule	No	2015 WUE Business Plan update is approximately 60% complete. Scope of work was expanded in November 2014 and plan completion scheduled has been extended to June 30, 2015. RWPS has been drafted, estimated completion is March 2015. IRP estimated completion is August 2015. UWMP 2015 Guidelines are under development.
81	FY 2014/15	Quarterly	Engineering, Planning and Science	D	Identify and evaluate supplemental water supplies for the region by October 2014	Complete the IRP	December-2014	Completion of the IRP	Sylvie Lee	January	2015	Behind Schedule	No	Addtional studies being performed to identify impacts to Chino Basin caused by WUE, water use and changes in basin management. Estimated completion of IRP is August 2015.
82	FY 2014/15	Quarterly	Engineering, Planning and Science	D	Work with other agencies on the implementation of local regional programs to meet the region's goal of reaching 50,000 AFY of recycled water use by June 2022	Develop planning documents and regulatory permitting strategy to support the implementation plan as identified in the RWPS and IRP	June-2015	Development of Permitting Strategy of the IRP/RWPS	Sylvie Lee	January	2015	On Schedule	No	PEIR of the planning documents will commence at the completion of the IRP. Expected start date of the PEIR is July 2015

Goal ID	FY Start	Reporting Required	Division	Bus. Goal	Work Plan	Department Goal	Time Line	KPI	Assigned To	Note Month	Note Year	Status	Complete	Notes
83	FY 2014/15	Quarterly	Engineering, Planning and Science	D	Develop and implement Recycled Water Peak Demand Management Plan to optimize efficient use of recycled water by June 2015	Develop a plan for peak management Work with member agencies to encourage new development to connect to RW	Continuous	Development of plan and member agency communication	Sylvie Lee	January	2015	On Schedule	No	continuing dialogues with member agencies and their customers as needed to help connect new customers, and support demand management initiatives
70	FY 2014/15	Quarterly	Engineering, Planning and Science	D	Complete update of the Water Use Efficiency Business Plan by December 2014, the Integrated Resources Plan by October 2014, and the Urban Water Management Plan by June 2016	Integrated Resources Plan	December-2014	Adoption of the documents	Sylvie Lee	January	2015	Behind Schedule	No	Water Use Efficiency Scope of Work was expanded, along with added modeling efforts to depict basin management. Estimated completion date is August 2015.
71	FY 2014/15	Quarterly	Engineering, Planning and Science	D	Complete update of the Water Use Efficiency Business Plan by December 2014, the Integrated Resources Plan by October 2014, and the Urban Water Management Plan by June 2016	Urban Water Management Plan	June-2016	Adoption of the documents	Sylvie Lee	January	2015	On Schedule	No	No update, staff attending DWR workshops on development of 2015 guidelines
72	FY 2014/15	Quarterly	Engineering, Planning and Science	D	Complete update of the Water Use Efficiency Business Plan by December 2014, the Integrated Resources Plan by October 2014, and the Urban Water Management Plan by June 2016	Recycled Water Program Strategy	December-2014	Adoption of the documents	Sylvie Lee	January	2015	Behind Schedule	No	Draft document has been developed. Member Agency discussions have been delayed. Plan expected to be finalized and adopted by March 2015
73	FY 2014/15	Quarterly	Engineering, Planning and Science	D	Develop new targets and programs to achieve 20 x 2020 requirement through water use efficiency measures, including: improve rate structures, integrate water use into billing, expand outdoor water use efficiency, and increase local use of stormwater by December 2014	Develop tools to target the 2020 requirements	June-2015	226 gpcd by 2015 <200 gpcd by 2018	Sylvie Lee	January	2015	On Schedule	No	Water Use Efficiency Business Plan is approximately 60% complete. Scope of Work was expanded in November and completion date has been extended to June 30, 2015.
77	FY 2014/15	Quarterly	Engineering, Planning and Science	D	Optimize IEUA's use of potable and recycled water by July 2016	Complete the Recycled Water Program Strategy and begin the implementation plan	December-2014	Completion of RWPS	Sylvie Lee	January	2015	Behind Schedule	No	Draft RWPS document has been developed. Member Agency discussions have been delayed. Plan expected to be finalized and adopted by March 2015
92	FY 2014/15	Quarterly	Engineering, Planning and Science	E	Update Wastewater Facilities Master Plan by December 2014 and thereafter every 10 years to ensure timely expansion of Agency facilities to address anticipated regional growth	Update growth forecasts for WWFMP with updated population projections and demand forecast	December-2014	Completion of WWFMP	Sylvie Lee	January	2015	Behind Schedule	No	WWFMP draft to be circulated 1/19/2015 in coordination with TYCIP posting. Expected to be finalized by March 2015
94	FY 2014/15	Quarterly	Engineering, Planning and Science	E	Monitor and integrate the Building Activity Report (BAR) data for actual and projected growth with the Asset Management Plan into regional wastewater planning	Continue to work with RCAs to review and maintain accurate building activity reports.	ongoing	Periodic checks to ensure that the forecasts are consistent with the adopted projections provided in the WWFMP	Sylvie Lee	January	2015	On Schedule	No	Prepared monthly building activity reports and GIS maps.
17	FY 2014/15	Quarterly	Engineering, Planning and Science	A	Begin the nexus study for regional connection fees by January 2015	Conduct the study to evaluate past fees and provide framework for future development	January-2015	Completion of study by Jan 2015	Sylvie Lee	January	2015	Behind Schedule	No	2nd Workshop on 12/11; 3rd Workshop on 1/13; Joint Technical Committee and Water Manager's Meeting 1/26; Regional Technical Committee Meeting 1/29; Policy Committee Meeting 2/5. Tentative rate adoption/study completion scheduled for March 2015
55	FY 2014/15	Quarterly	Engineering, Planning and Science	C	Continue to apply Lean management principles to streamline current business processes and systems and eliminate waste and redundancies	Develop long term strategy for permitting of the O&M activities of recharge basins	June-2015	Completion of strategy by Jun 2015	Sylvie Lee	January	2015	On Schedule	No	EC staff is preparing the individual permit application. Task order issued to Tom Dodson in support of Agency staff.

Goal ID	FY Start	Reporting Required	Division	Bus. Goal	Work Plan	Department Goal	Time Line	KPI	Assigned To	Note Month	Note Year	Status	Complete	Notes
66	FY 2014/15	Quarterly	Engineering, Planning and Science	C	Identify and participate in organizations that advance the Agency's mission, vision and key initiatives	Attend local and regional meetings such as CASA, SCAP, WateReuse, SCWC, CWEA, ACWA, etc.	Continuous	Attendance at regular meetings	Sylvie Lee	January	2015	On Schedule	No	Staff continue to participated in meetings.
26	FY 2014/15	Quarterly	Engineering, Planning and Science	A	Integrate and fully fund the Replacement and Rehabilitation (R&R) projects identified in the Agency's Asset Management Plan into the annual capital improvement plan (CIP)	Integrate the Asset Management Plan into the TYCIP	February-2015	Completion of TYCIP by Feb 2015	Sylvie Lee	January	2015	On Schedule	No	TYCIP Draft has been circulated internally and will be posted on IEUA's website by 1/19/15 for MA, Tech & Policy Committee, and Board review and comments.
26	FY 2014/15	Quarterly	Engineering, Planning and Science	A	Integrate and fully fund the Replacement and Rehabilitation (R&R) projects identified in the Agency's Asset Management Plan into the annual capital improvement plan (CIP)	Integrate the Asset Management Plan into the TYCIP	February-2015	Completion of TYCIP by Feb 2015	Sylvie Lee	January	2015	On Schedule	No	TYCIP is on scheduled - draft was posted online in January for the contracting agencies, with adoption in February/March 2015 by the Regional Committees and the IEUA Board
Technical Services														
148	FY 2014/15	Once Complete	Operations	C	Review and update the Asset Management Plan by December 2014	Update the Asset Management Plan annually by incorporating the findings of Condition Assessment reports and documenting changes relating to Agency assets	Complete by December 2014.	Not applicable	Jeff Noelte	January	2015	Behind Schedule	No	The updates to the System Summaries chapter and project lists were completed in December. Updates to remaining chapters are being reviewed. The Fiscal Year 2015/16 AMP will be complete by the end of January.

FY 2014/15
2nd Quarter Budget Variance Report

Board of Directors

March 18, 2015

Revenue Highlights
Actual vs. Amended Budget

GOOD NEWS…

- **Recycled Water Sales** – $6.5M, 68.3% of amended budget
  - 19,337 AFY actual vs. 32,000 AFY amended budget

OKAY NEWS…

- **New EDU Connection Fees -** $6.3M, 40.9% of amended budget
  - 1,231 new connections compared to budgeted 3,000 units.

NOT SO GOOD NEWS…

- **Grant and Loan Proceeds** - $3.5M, 15.1% of amended budget
  - Construction for the Central/Wineville area recycled water projects accounts for the low receipts, project is expected to be complete in July 2015.

Expense Highlights
Actual vs. Amended Budget

GOOD NEWS...

- **Utilities - $5.1M, 48.8% of amended budget**
  - Lower actual SCE rate of 11.6 cents/kWh versus budgeted rate of 12.0 cents/kWh however usage was increased through the second quarter; also lower natural gas rates, actual average was $0.503/therm compared to the budgeted rate of $0.80/therm.
- **Employment - $17.8M, 43.5% of amended budget**
  - Weighted average vacancy factor of 13.1%, or 38 FTE's, far above the 5% budgeted rate.

NOT SO GOOD NEWS...

- **Operating Fees - $6.0M, 53.2% of amended budget**
  - Increase in TSS and BOD expense in the north system, due to digester clean up activity.

FY 2014/15 Q2 Operating & Non-Operating Net Decrease

($Millions)

Operating	FY 2014/15 Amended Budget	Quarter Ended 12/31/14	Actual % of Amended
Operating Revenue	$83.0	$43.0	51.8%
Operating Expense	$95.1[1]	$37.6	39.6%
Operating Net Increase (Decrease)	**($12.1)**	**$5.4**	

Non-Operating	FY 2014/15 Amended Budget	Quarter Ended 12/31/14	Actual % of Amended
Non-Operating Revenue	$80.6	$23.8	29.6%
Non-Operating Expense	$94.2[1]	$49.2[2]	52.2%
Non-Operating Net Increase (Decrease)	**($13.6)**	**($25.4)**	

[1]Total budget encumbrance carry forward of $19.3 million from FY 2013/14 to FY 2014/15: $1.3 million for O&M expenses, $3.1 million for special projects and $14.9 million for capital projects.
[2]Includes debt service of $28.4 million and capital expenditures of $20.4 million.

FY 2014/15 Q2 Ending Fund Balance ($Millions)

Fund Balance	Amended Annual Budget	Quarter Ended 12/31/14	Actual % of Amended
Total Revenue	$163.6	$66.8	40.8%
Total Expense	$189.3	$86.8	45.9%
Total Net Increase (Decrease)	**($25.7)**	**($20.0)**	
Beginning Fund Balance	$151.1	$151.1	
Ending Fund Balance	**$125.4**	**$131.1**	

FY 2014/15 Budgeted Encumbrance Carry Forward/Return ($Millions)

- **2013/14 Budget Carried Forward** – $19.3M of encumbrances and project budgets were carried forward to FY 2014/15
- **Budget Returned** *- $2.5M of unspent or unused carry over budget to be returned in January

	Capital & Special Projects	O&M	Total
Carried Forward – September 2014	$18.0	$1.3	**$19.3**
Encumbrance Return – January 2015	($2.5)	($0.02)	**($2.5)**
Total Used or Remaining Encumbrance	**$15.5**	**$1.3**	**$16.8**

*In accordance with Agency Policy A-81 - carry forward encumbrances and budget not expended by December 31st of each year are subject to cancellation.

Inland Empire Utilities Agency
A MUNICIPAL WATER DISTRICT

Date:	April 30, 2015/May 14, 2015
To:	Regional Committees
From:	Inland Empire Utilities Agency
Subject:	Commercial, Industrial, Institutional (CII) Turf Rebate Update

RECOMMENDATION

This is an information item for the Regional Committees to receive and file.

BACKGROUND

This item was presented at the IEUA Board of Directors meeting on April 15, 2015.

Inland Empire Utilities Agency
A MUNICIPAL WATER DISTRICT

Date:	April 15, 2015
To:	The Honorable Board of Directors
Through:	Public, Legislative Affairs, and Water Resources Committee *(04/08/15)*
From:	P. Joseph Grindstaff General Manager
Submitted by:	Chris Berch Executive Manager of Engineering/Assistant General Manager
	Sylvie Lee Manager of Planning and Environmental Compliance
Subject:	Commercial, Industrial, Institutional (CII) Turf Rebate Update

RECOMMENDATION

This is an informational item for the Board of Directors.

BACKGROUND

The Commercial, Industrial, and Institutional (CII) Turf Removal Rebate Program promotes the removal of high water-consuming turf, encourages participants to install climate appropriate plants, and to convert overhead sprinklers to more efficient technologies such as micro-spray or drip system irrigation. Over 65 percent of the region's water is used to irrigate landscape with outdoor water use representing a major source of waste.

As a part of regional water use efficiency planning and programming, the Agency works with its member agencies to develop an annual budget. A component of that budget includes allocating funding to enhance rebates for Residential and CII customers. Metropolitan Water District (MWD) provides water use efficiency rebates with a base rate. The Agency, in partnership with its members, augments those rebates to increase the base rate and attract greater participation.

In response to the Governor's Drought Declaration and call for an immediate reduction in water use, on July 1, 2014, the Agency and its members increased the regional CII Turf Removal Rebate by adding $1 to MWD's base rebate rate of $2, for a total enhanced incentive of $3. To expand program participation, on July 10, 2014, the Agency issued a press release notifying the public of the $1 increase to the rebate and encouraged Southern Californians to significantly reduce outdoor water use during this exceptional period of drought.

On August 6, 2014, staff reported to the Board that after the issuance of the CII Turf Removal Rebate press release that the program experienced a considerable increase in participant interest, and that it was anticipated customer demand would significantly exceed the existing budget. On October 15, 2014, Staff recommended that the Board approve an inter-fund transfer and loan of $3,000,000 from the Administrative Services Fund to the Water Resources Fund in order to honor current and future requests.

The following table represents the total number of CII turf removal applications that have been received through MWD's Socalwater$mart rebate program from July 1, 2014 through March 11, 2015. A total of 30 applications have been paid to date, representing Agency sponsored funding of $278,573 ($1 per square foot). The remaining applications are in-progress.

TOTALS	90	2,979,558.80	33	$521,594	33	$562,835	24	$225,700	$1,310,128.80	$7,273,856.40

*Note: Totals are subject to change after Post-Inspection

The program continues to be very popular with a high demand from the CII sector. Agency supplemental funding of $1,310,128.80 has been committed to date with $1,879,841.20 remaining in Agency approved funding. In order to ensure that Agency supplemental funding is equitably disbursed; staff is recommending that the Board approve several policy principles:

1. Principle: Set a maximum application funding level for Agency approved supplemental funding ($1 per square foot):

    a. **Option 1**: No maximum application funding limit – this would allow very large projects to consume the entire Agency provided supplemental funding.

    b. **Option 2**: Set a maximum application funding level at $50,000 or a maximum project size of 50,000 square feet. Total projects under 50,000 square feet represent 82 sites.

    c. **Option 3**: Set a maximum application funding level at $100,000 or a maximum project size of 100,000 square feet. Total projects between 50,000 – 100,000 square feet represent 5 sites. Total Projects over 100,000 square feet represent 3 sites.

Staff has reviewed all applications submitted from July 1, 2014 through March 11, 2015 and has determined the average size of CII turf projects to be approximately 33,106 square feet with the majority of projects below 100,000 square foot. Setting a funding level maximum will prevent a few larger CII turf projects from consuming the entire supplemental funding budget while limiting the opportunity for HOAs, smaller public agency projects, or smaller commercial properties from participating in the program.

2. **Principle**: Staff recommends allowing eligibility for CII customers who utilize groundwater supplies for irrigation by allowing CII groundwater users to participate, it will reduce irrigation use and increase available supplies for other uses.

3. **Principle**: Staff recommends allowing eligibility for CII customers who utilize recycled water for irrigation by allowing CII recycled water users to participate, it allows the Agency to utilize additional recycled water supplies for groundwater recharge and assists in reducing peaking demands during the summer months when irrigation usage is at its highest.

While the Agency's supplemental funding is available to accommodate all requests, a modification is necessary to achieve the following objectives in a sustainable manner:

- Increase public awareness regarding use of water efficiency landscaping.
- Transforming the market towards use of more efficient outdoor water use practices.
- Accelerating the region's ability to comply with 20 percent water use reduction by 2020.
- Achieving increased water savings during this critical period of drought.

In addition, Agency staff is currently working with the Santa Ana Watershed Project Authority (SAWPA) on the Department of Water Resources (DWR) Proposition 84 Integrated Regional Water Management (IRWM) Drought Emergency Grant and has confirmed that the Agency is anticipated to receive approximately $683,000 in reimbursements for CII turf removal, specifically related to public sector and homeowner's association projects. To date, the Agency has already met that obligation for grant reimbursement and will be submitting invoicing once an SAWPA and DWR have an executed agreement.

This program is consistent with the Agency's Business Goal of increasing *Water Reliability* by promoting water use efficiency and education to enhance water supplies within the region and meeting the region's need to develop reliable and diverse local water resources in order to reduce dependence on imported water supplies.

PRIOR BOARD ACTION

On October 15, 2014, the Board of Directors approved an inter-fund transfer and loan of $3,000,000 from the Administrative Services Fund to the Water Resources Fund in order to honor current and future CII turf removal application requests.

IMPACT ON BUDGET

The $1,879,841.20 in supplemental rebates committed to date is supported by the approved funding budgeted in the Agency's Water Resources (WW) fund.

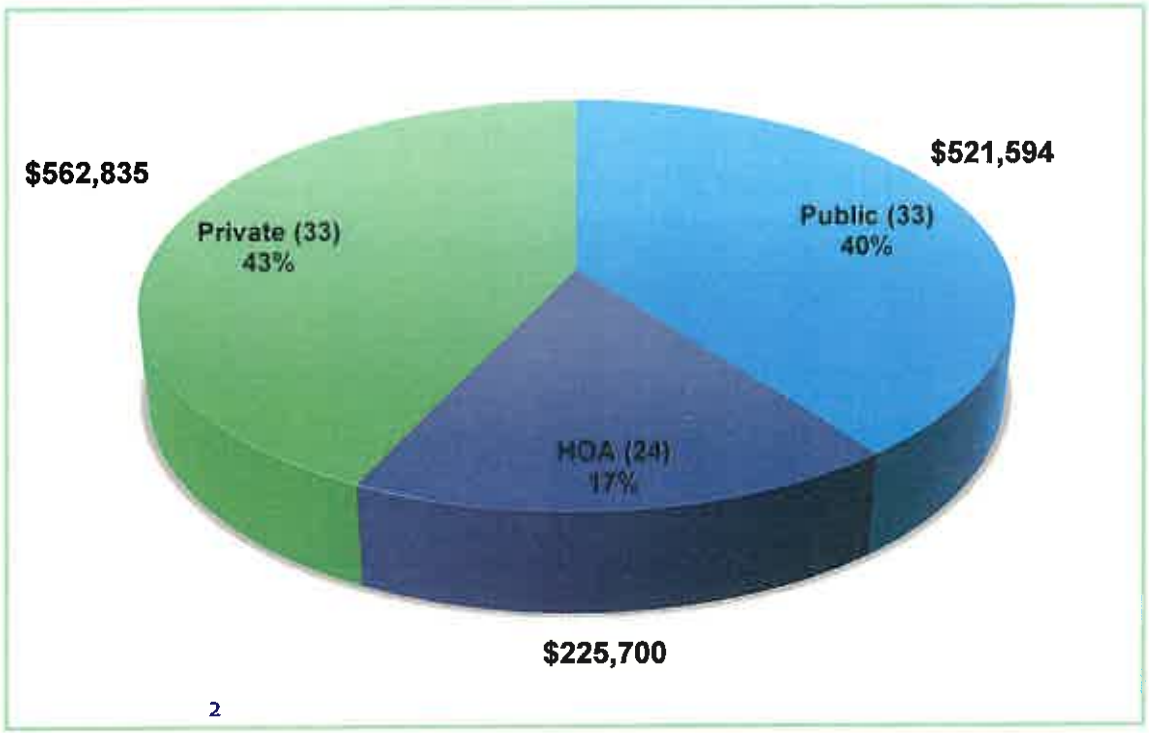
Project Scope
IEUA Supplemental Funding
July 1, 2014 – March 11, 2015

* 90 applications received (3.0 M sq. ft.)
* Funding committed ($1.3 M)
* 30 applications paid ($0.3 M)



Program Budget

$1 / Square Foot Supplemental Funding

Description	Budget
Revised FY 2014-2015 Budget	$3,189,970
IEUA supplemental funding - reserved to date	$1,310,129
IEUA supplemental funding - paid to date	$ 278,573
IEUA supplemental funding – uncommitted	$1,879,841

Program Scopes

* Total Projects under 50,000 sq. ft. = **82**
* Total Projects between 50,000 – 100,000 sq. ft. = **5**
* Total Projects over 100,000 sq. ft. = **3**

Program Request

* **Principle**: Set a maximum application funding level for Agency approved supplemental funding ($1 per square foot):
  - **Option 1**: No maximum application funding limit – this would allow very large projects to consume the entire Agency provided supplemental funding.
  - **Option 2**: Set a maximum application funding level at $50,000 or a maximum project size of 50,000 square feet;
  - **Option 3**: Set a maximum application funding level at $100,000 or a maximum project size of 100,000 square feet.
* **Principle**: Allowing eligibility for CII customers who utilize groundwater supplies for irrigation.
* **Principle**: Allow eligibility for CII customers who utilize recycled water for irrigation.

Recommendation

- Staff recommends the Board consider approving a maximum application funding level for Agency approved supplemental funding at $100,000 ($1 sq. ft.)

Consistent with the Agency's business goal of increasing Water Reliability by promoting water use efficiency and education to enhance water supplies within the region and meeting the region's need to develop reliable and diverse local water resources in order to reduce dependence on imported water supplies.

1.0 INTRODUCTION

The Inland Empire Utilities Agency (IEUA or Agency) is a public agency serving the Inland Empire region as a regional wastewater agency, as well as a wholesale supplier of imported and recycled water. In April 2014, the Agency contracted with Carollo Engineers, Inc. to conduct a Connection Fee Study for the regional wastewater and water systems. This report specifically addresses the wastewater connection fees.

The connection fee study builds on the Agency's other planning efforts that are currently being developed. These efforts include the following:

- Integrated Resources Planning
- Recycled Water Program Strategy
- Recharge Plan Update
- Facilities Master Plan
- Energy Management Plan
- Asset Management Plan
- Long Range Plan of Finance
- Connection Fee/Rate Study

IEUA currently imposes Wastewater capacity fees of $5,107 per equivalent dwelling unit. The objective of the connection fee study is to update the wastewater connection fees as appropriate based on current system values and proposed capital improvements; and to develop a new connection fee for the Agency's water system. In order to determine conformance with industry standards and principles, legal requirements, and the Agency Board policy, the following criteria were used in evaluating the validity of the connection fee process:

- Do the connection fees represent a reasonable nexus to the costs incurred by the Agency on behalf of future customers and the benefits received?
- Is the allocation approach consistent with industry practices and California Government Code §54999.7 and §66013?
- Is it likely that the allocation approach will be appropriate for use by the Agency in the future?

The connection fee analysis is based upon a point in time calculation based on the FY 2012/13 Fixed Asset Schedule, current IEUA Ten Year Capital Improvement Plan (CIP), projected flows, and other Agency Data. This report presents Carollo's findings and proposed adjustments to the existing Connection Fees.

2.0 BACKGROUND

2.1 Regional Wastewater System

IEUA's regional wastewater system provides collection, treatment, and disposal of municipal wastewater for the residents and businesses within its service area. The seven member agencies within IEUA's wastewater treatment service area include the City of Chino, the City of Chino Hills, Cucamonga Valley Water District, the City of Fontana, the City of Montclair, the City of Ontario, and the City of Upland. In all, IEUA's wastewater system serves nearly 850,000 residents in a 242 square mile area of western San Bernardino County, and treats an average of 56 million gallons of wastewater per day.

2.1.1 Wastewater Collections

The regional collection system transports wastewater from the member agencies to IEUA's wastewater treatment facilities. The major assets of the collection system includes 94 miles of wastewater interceptor pipes, 72 miles of non-reclaimable wastewater pipes, and four wastewater lift stations. Other collection system assets include manholes, SCADA systems, and various auxiliary equipment.

2.1.2 Wastewater Treatment

IEUA owns, operates, and maintains five wastewater treatment plants located throughout the service area. The plants are interconnected via the regional collections system bypass pipelines. Table 2.1 provides a brief description of each plant.

Table 2.1 Treatment Facilities

Plant		Location	Treatment Processes	Notes
Carbon Canyon Water Recycling Facility	CCWRF	Chino	Primary, Secondary, Tertiary	Solids conveyed to RP-2 for treatment
Regional Water Recycling Plant #1	RP-1	Ontario	Primary, Secondary, Tertiary, Solids	
Regional Water Recycling Plant #2	RP-2	Chino	Solids Treatment Only	Liquids removed during solids processing are conveyed to RP-5
Regional Water Recycling Plant #4	RP-4	Rancho Cucamonga	Primary, Secondary, Tertiary	Solids conveyed to RP-1 for treatment

Table 2.1 Treatment Facilities				
Plant		**Location**	**Treatment Processes**	**Notes**
Regional Water Recycling Plant #5	RP-5	Chino	Primary, Secondary, Tertiary	Solids conveyed to RP-2 for treatment

3.0 CONNECTION FEE OVERVIEW

Connection fees are a method by which local agencies can impose charges to offset the costs of new customers connecting to their water, wastewater, or other utility or infrastructure systems. Capacity fees are governed by California Government Code §66000, which provides a legal framework for the applicability, assessment, and imposition of capacity fees. There are various methods to calculate capacity fees; the most appropriate method for any system is dictated by the system's specific characteristics. The proposed capacity fees represent the maximum fees that the Agency can impose based on the calculations as discussed in this report.

3.1 Statutory Requirements

A connection fee that is levied on users of a wastewater utility is subject to the requirements of Chapter 13.7 (commencing with Section §54999) of Part 1 of Division 2 of Title 5 of the California Government Code relating to the imposition of charges on customers that are public agencies. Connection fees are also subject to the requirements of Government Code §66013. Connection fees are "charges for facilities in existence at the time the charge is imposed or charges for new facilities to be constructed in the future, which are of benefit to the person or property being charged." Section §66013 provides that connection fees "shall not exceed the estimated reasonable cost of providing the service for which the fee or charge is imposed." Section §54999.7 establishes a similar cost-of-service requirement. As determined by *Richmond v. Shasta Community Services Dist. (2004) 32 Cal. 4th 409*, Connection fees are not subject to the provisions of California Constitution article XIII D (Proposition 218). A connection fee is imposed on new connections in order to recover a fair and equitable share of the costs of capacity within the utility facilities. A key tenet in adopting these connection fees is: "growth pays for growth." This means that the costs associated with building excess capacity to serve new customers ultimately should be borne by those new users who benefit from this available capacity.

3.2 Connection Fee Methodologies

Two general types of connection fees are used to recover system investments from new users. They are the System Buy-In Approach and the Incremental Cost Approach. Additionally, utilities

can elect to use a Hybrid Approach that combines the Buy-In and Incremental Approaches. While all are valid, the best approach is dictated by each system's specific characteristics.

3.2.1 Buy-In Approach

Utilities often construct infrastructure capacity to meet projected future demands. The purpose of the Buy-In approach is to recover costs that have already been incurred by the Agency. Existing customers have paid for this system over time through their user rates and fees (through direct capital financing or retired debt). The Buy-In approach provides a mechanism to reimburse existing system users for the carrying costs of constructing system capacity that is available to be used by future users. In this sense, the Buy-In approach segregates the existing system value into costs for existing customers and costs for future users.

There are further considerations when calculating the Buy-In approach. Given that the existing system was constructed over time, the original cost of constructing the system neither accurately reflects the current value of that system nor the cost to construct the facilities today. Consequently, original costs were escalated to Fiscal Year 2014/15 dollars using Engineering News Records Construction Cost Index (ENR-CCI). The Agency's FY 2012/13 fixed asset records were used as the basis for this analysis, which included original costs, acquisition dates, and estimated useful lives.

Replacement costs alone might not be the best estimate of system value, because system assets have a finite lifespan and must be replaced and/or rehabilitated in time. The Agency adjusts the existing cost basis by deducting straight-line depreciation. Accumulated depreciation is determined by dividing the age of each asset by the projected useful life and reducing the asset value by that percentage. By accounting for accumulated depreciation in the Buy-In cost approach, the Agency may recover a proportionate value of capital improvements that will replace depreciated assets or will be undertaken to extend the useful lives of these assets through the future cost component of the connection fee.

The Buy-In approach should not include costs of assets that were grant-funded or donated assets and should only include those costs incurred by the Agency ratepayers for the development of the existing system, which includes the accumulation of fund reserves as well as expenses associated with construction in progress.

Finally, in the calculation of the Buy-In approach, the existing system value is segregated into the portions for existing customers and future users. This is achieved by determining the approximate share of each asset that benefits existing customers and the share that is available to benefit future users. This is calculated on a percentage of capacity basis for major unit processes like primary treatment, secondary treatment, and tertiary treatment and on an average basis for all other assets.

The Buy-In approach divides the value of the existing system available to serve future users by the total number of future users that are expected to benefit from the system in order to calculate the connection fee.

$$Buy\ In\ Connection\ Fee = \frac{Value\ of\ the\ Available\ System}{Expected\ Future\ Users}$$

3.2.2 Incremental Approach

The Incremental approach recovers the cost in present value (2014/15) dollars of the Agency's planned investments that it will undertake to add to serve future development. Projects included in the Agency's capital improvement program have two primary purposes – maintain reliability of existing infrastructure; and increase system capacity. In the Incremental approach, the future system value is segregated between those two purposes. The costs of each project is associated in some percentage to either or both of these purposes. This is achieved by determining the approximate portion of each asset that benefits either existing customers or future users. In the incremental approach, the current value of planned capital improvements that will serve future users through the Agency's planning horizon of 2035 is divided by the expected number of future users through 2035.

The future cost basis accounts for capacity related improvements that will be constructed through 2035. The costs of these improvements are estimated in present value terms (2014/15 dollars). Costs are fairly and reasonably spread over all future users by dividing the total system value by the total number of future users that are projected to receive wastewater service by 2035.

$$Incremental\ Capacity\ Fee = \frac{Capacity\ Related\ CIP}{Expected\ Future\ Users}$$

3.2.3 Hybrid Connection Fee Approach

The Hybrid (Combined) Approach combines the Buy-In and Incremental approaches. Current system value is added to the costs of capacity related capital projects, and divided by the expected future customers.

$$Hybrid\ Connection\ Fee =$$

$$\frac{Value\ of\ the\ Available\ System}{Expected\ Future\ Users} + \frac{Capacity\ Related\ CIP}{Expected\ Future\ Users}$$

3.2.4 Recommended Approach

Based on the characteristics of the Agency's wastewater system and discussion with Agency Staff, Carollo recommends that the hybrid approach be used for the calculation of the wastewater connection fee. IEUA's wastewater system holds available capacity that has been funded by existing users, which drives the need for a Buy-In component. Additionally, the CIP is designed to expand system capacity, calling for an incremental component. Using the hybrid

approach establishes a nexus between the value of the existing and future system, and between the benefits of capital investments to existing customers and future users. The hybrid approach is commonly utilized by other agencies such as the comparable agencies of the City of Las Vegas, Sacramento Regional County Sanitation District, and the San Diego County Water Authority.

4.0 WASTEWATER CONNECTION FEES

In order to calculate the Hybrid connection fee for IEUA, based on the equation presented above, three separate steps must be taken as follows:

1. The Value of the Available System must be determined. This includes determining the value of the existing assets and then adjusting that value based on the share that is available to serve future users. However, this adjustment will be presented after the calculation of the existing system since the future users' share of the other components of the existing system (reserves and construction in progress costs) cannot be determined until the number of expected future users is determined. Similarly, the property tax credit received by connecting customers cannot be determined until the number of expected future users is determined.

2. The Capacity Related CIP, or synonymously the Value of the Future System, and the portion allocated to future users must be determined.

3. The Number of Expected Future Users must be determined.

The following sections of the report outline the process to determine each of these steps.

4.1 Value of Available System

In order to determine the Value of the Available System, the value of the existing system must be determined and must account for reserves, construction in progress a property tax credit, and the portion that is available for future users. This section presents the value of the existing system and the adjustments made for reserves, construction in progress, and property tax credit. A later section in the report shows how the value is adjusted to become the value of the available system.

4.1.1 Net Capital Asset Equity

Net capital asset equity represents the current value of the physical wastewater or water systems funded by existing ratepayers, less accumulated depreciation. This approach accounts for the fact that system assets have been in service and no longer have the full useful life. The terms related to the calculation of net capital asset equity are defined as shown below.

1. Replacement Cost New- Current value of the existing water or sewer system. Original costs are escalated to Fiscal Year 2014/15 dollars using Engineering News Record Construction Cost Index (ENR-CCI).

2. Capital Costs Not Funded by Existing Ratepayers- These include developer-funded assets and are excluded from the ratepayers' equity calculation.

3. Construction in Progress- capital projects currently under construction or recently completed, not captured in the Existing Plant-In-Service asset records.

4. Depreciation- Represents the loss in value of the system as the useful life of that asset is exhausted.

Throughout the remainder of this report, the value of the physical system will be referred to as Replacement Cost New Less Depreciation (RCNLD).

4.1.1.1 Valuation of Physical Assets

The RCNLD represents the value of each system's physical assets. The RCNLD for each system was calculated based on the Agency's Fixed Asset Schedule (physical asset records). The RCNLD of all Agency Fixed Assets are summed into different assigned asset groups. The cost of each asset in the wastewater group was then allocated between flow, BOD, and TSS according to its association with different unit processes in the treatment process. The different unit processes and distribution of costs associated with that process are presented in Table 4.1. The values in Table 4.1 are based on allocations among the billable constituents of flow, BOD, and TSS, based on design criteria for sizing each unit process. The derivations of these allocations are described in more detail in the first part of Appendix A (typed portion).

The second part of Appendix A (handwritten portion) explains how the allocations were made to the existing and future customers (growth) for each existing asset and capital project. The information in Appendix A is then used to allocate the existing assets. The result of this allocation is shown in Appendix B. This is a two-step process.

In the first step the assets are allocated on a unit process basis to the constituents of flow, BOD, and TSS, For example, the fifth asset listed in Appendix B is the RP-5 Aeration Basin. Since an aeration basin is an Activated Sludge process (also considered secondary treatment), the value of it is allocated 100% to BOD, as shown in Table 4.1.

In the second step, the assets are allocated to existing and future customers. Using the same RP-5 Aeration Basin from the first step, it has some existing capacity for future customers (growth), as described in the second part of Appendix A (see Appendix A, page 4 of 15 of the handwritten sheets – the aeration basin is a secondary treatment process and 33% of its capacity is for future customers (growth)).

This two-step process was used to allocate the value of each of the fixed assets in Appendix B.

Table 4.1 Unit Process Allocation			
Unit Process	**Flow**	**BOD**	**TSS**
Collection System	100%		
Preliminary Treatment	100%		
Primary Clarifiers	80%		20%
Activated Sludge		100%	
Secondary Clarifiers	80%	20%	
Tertiary Treatment	100%		
DAF Thickening (WAS)		100%	
Gravity Thickening (Primary Sludge)			100%
Anaerobic Digestion		45%	55%
Sludge Dewatering		45%	55%
Sludge Disposal		45%	55%

It should be noted that some assets cannot be easily classified into the unit processes listed in Table 4.1. For example, the cost of assets such as yard piping, odor control, and instrumentation that support the general function of the facility are otherwise unassignable to any specific unit process. For those assets, the weighted average of the allocation of all the other assets was used. The weighted average of the total asset allocations factors for flow, BOD, and TSS are presented in Table 4.2.

Table 4.2 Asset Allocation Factors	
Billable Constituent	**Allocation**
Flow	44%
BOD	34%
TSS	21%

The total RCNLD for the Agency's wastewater group assets and the total costs that have been allocated between flow, BOD, and TSS are presented in Table 4.3.

Table 4.3 Value of Fixed Assets			
Flow	**BOD**	**TSS**	**Total**
$276,273,054	$180,302,439	$114,170,620	$570,746,114

4.1.2 Value of Fixed Assets Available for Growth

As described above as the second step, the value of capacity in the existing system still available to serve future users (growth) for each existing asset is shown in Appendix B. Table 4.4 summarizes Appendix B by presenting the total RCNLD from Table 4.3 and the portion that is available to serve future users (growth). It also shows how the total value to serve future customers is broken down into each billable constituent of flow, BOD, and TSS.

Table 4.4 Value of Fixed Assets Available for Growth

Allocation	Flow	BOD	TSS	Total
Total Asset Value	$276,273,054	$180,302,439	$114,170,620	$570,746,114
Assets for Growth	$65,000,914	$50,002,336	$31,438,329	$146,441,580

4.1.3 Reserves

The fund balances at the beginning of FY 2014/15 in the Administrative Services Fund, Regional Wastewater Capital Improvement Fund, Non-Reclaimable Wastewater Fund, and the Regional Operations and Maintenance Fund collectively make up the Reserves component of the value of the existing wastewater system. Other funds, which have not been included within this wastewater connection fee calculation, are associated with either the water or recycled water systems. Table 4.5 presents the wastewater fund balances at the beginning of FY 2014/15. Only a portion of the Administrative Services Fund, proportionate to the percentage of all Fixed Assets that are associated with wastewater, is included in the value of the existing wastewater system. This portion of the Administrative Service Fund is included because it is an asset that future users benefit from that has already been paid for by existing users.

Table 4.5 Reserves

Fund	Balance
Administrative Services (GG)	$14,544,155
Non-Reclaimable Wastewater (NC)	4,502,755
Regional Wastewater Capital Improvement (RC)	60,856,307
Regional Operations and Maintenance (RO)	30,215,738
Total Wastewater (RO, NC, RC)	**$110,128,955**

Each reserve balance represents monetary value that a new user buys into when they join the system. Therefore, reserves are assets that are divided amongst both the existing customers and future users in the system. After estimating the number of future users in the system in a later section, the future users' share of the reserve balances can be calculated. The portion of the reserves that are allocated to the connection fees is based upon the ratio of the future users EDUs to total EDUs at the end of the planning period in 2035 (future users plus existing users). The Administrative Services Fund, Regional Wastewater Capital Improvement Fund, Non-

Reclaimable Wastewater Fund, and the Regional Operations and Maintenance Fund are all assets that benefit both existing customers and future wastewater users. Therefore, they are included in the value of the existing system as costs for which future users must reimburse existing customers.

4.1.4 Construction in Progress

The Agency's Construction in Progress are costs associated with the portion of Capital Improvement Plan projects that have been expensed. However, the projects are not yet recorded as Fixed Assets. These can include construction-in-progress projects as well as projects completed in a fiscal year. In this case we are concerned with projects from FY 2013/14 because they are projects that are not included in the fixed asset list described above and are also not included in the future capital projects, which will be described below. We have allocated these projects to growth and existing users on a project-by-project basis in the same fashion that the fixed assets were allocated. Table 4.6 below presents the results of these calculations. A listing of these projects is included at the end of Appendix B.

Table 4.6 Construction in Progress & Completed Projects FY 2013/14

Fund	Total Construction in Progress Costs ($ millions)	Costs Allocated To Growth ($ millions)	Costs Allocated to Existing Customers ($ millions)
Construction in Progress Projects in FY 13/14, Escalated	$13,395,388	$4,377,581	$9,017,807
Completed Projects in FY 13/14, Escalated	$14,754,564	$7,205,444	$7,549,120
Total Construction in Progress and Completed Projects in FY 13/14, Wastewater Fund, Escalated	**$28,149,952**	**$11,583,026**	**$16,566,926**

4.2 Value of Future System

4.2.1 Capital Projects

The value of the future system is determined by evaluating the capital investments that will add capacity to serve future users. As noted previously, IEUA has developed several planning documents to help determine the need for capital investments. These documents include Capital Improvement Plans (CIPs) for both the Water and Sewer systems through 2035. Only the projects that provide a benefit to future users are included as a cost element in the calculation of connection fees.

The Wastewater CIP project types that are included in the calculation of the connection fee include the following:

- Agency Headquarters improvements
- New Agency Laboratory facilities

- Agency Lift Station expansion and upgrades
- Agency-wide repairs and improvements
- New Business Network and Process Automation Control Network upgrades
- Upgrades to the Carbon Canyon Water Recycling Facility
- Upgrades to the Inland Empire Regional Composting Facility
- Expansions and upgrades to the Regional Conveyance System
- RP-1 Sludge Improvements and Expansion
- RP-2 Decommissioning
- RP-4 Improvements and Expansion
- RP-5 Improvements and Expansion

The future capital projects that add capacity specifically benefitting future development or upgrade the system in a manner that benefits both future and existing users are evaluated on a project-by-project basis to determine the amount that should be allocated to future users. Based on this approach, projects that are undertaken strictly to expand capacity for future users are allocated 100% to future customers. Projects that upgrade the system in order to meet regulatory requirements or rehabilitate assets that have reached the end of their useful lives, are allocated to both existing and future users proportionate to capacity requirements. It is important to note that the value of the existing system assets have been reduced by depreciation in order to prevent double counting of asset values.

The calculations for these allocated amounts are included in Appendix C. The method for allocating these costs is identical to the two-step method described above for the fixed assets. However, the methodology is applied to a different list of assets, in this case future assets (CIP projects) that are allocated to both existing and future customers (growth).

Table 4.7 summarizes the portion of the project costs, by fund, that are allocated to future users and that are planned for the Agency's wastewater system through 2035. It should be noted that regardless of which fund the capital projects are listed in (e.g., GG, RC, RO) they are all capital projects and can have allocations to both existing and future customers (growth). For example, a project being listed in the RO fund does not mean that it does not have excess capacity that is available for growth. A specific example is the RP-5 Solids Treatment Facility (RP-2 Relocation). Some of the new facilities will be for existing customers (47%) and some will be for future customers (growth – 53%).

Table 4.7 Wastewater Capital Improvement Projects by Fund			
Fund	**Total Wastewater Project Costs ($ millions)**	**Total Costs Allocated to Growth ($ millions)**	**Total Costs Allocated to Existing Customer ($ millions)**
Administrative Services (GG)	$28,249,010	$10,988,701	$17,260,309
Regional Wastewater Capital Improvement (RC)	401,396,950	272,253,286	129,143,664
Non-Reclaimable Wastewater (NC)	33,174,000	7,961,760	25,212,240
Regional Operations and Maintenance (RO)	345,532,951	138,397,835	207,135,116
Residuals Management & Organics Mgmt (RM)	18,175,000	6,724,750	11,450,250
Total Wastewater (GG, RC, NC, RO, RM)	**829,377,911**	**$436,326,332**	**$390,201,579**

Notes:

(1) 95% of the costs in the CIP that are both associated with the GG Fund and allocated to growth are spent towards projects to develop the wastewater system. 5% are allocated towards the Water Resources CIP. 95% of the GG Fund capital expenses are included here.

4.2.2 Allocation of Projects in Non-Reclaimable Wastewater System

The IEUA has a Non-Reclaimable Wastewater (NRW) system (see Table 4.7 for capital costs). The NRW system is divided into two zones: a northern collection system that conveys wastewater to the Los Angeles County Sanitation Districts for treatment and ocean disposal, and a southern collection system that conveys wastewater to Orange County Sanitation District for treatment and ocean disposal. The IEUA discharges the centrate produced in the RP-1 dewatering process to the NRW system. In addition, some industries discharge to the system to lessen the impact of their high salinity discharges on the IEUA treatment facilities. Finally, domestic wastewater can be bypassed to the NRW system, if needed.

The primary function of the NRW system is to export high salinity wastewater out of IEUA's service area. The NRW system is a key element in the IEUA's salinity management program. Without this system, IEUA would not be able to meet their effluent discharge requirements for salinity without adding expensive advanced treatment to their facilities (e.g., Reverse Osmosis). In 2013, a study was completed to estimate the capital costs of using advanced treatment, instead of the NRW system, for disposal of high salinity wastewater. The result was that advanced treatment would cost approximately $200 million. In addition, exporting the high salinity wastewater improves recycled water quality for both direct use and for groundwater recharge. The benefits of not having to spend $200 million on advanced treatment and of higher quality recycled water accrue to all of the customers in the IEUA service area. Because the benefit is for all customers, the capital costs for the NRW system that are shown in Table 4.7 are included in the allocation of costs to both existing customers and for growth (future customers).

The portion of the NRW capital costs that have been allocated to growth are based on the average allocation to growth of the RP-1 treatment facilities, which is 24%. Alternatively, the overall allocation to growth of all of the RP-1 facilities could have been used (28%). However, since all of the NRW projects over the next 20 years are related to the portion of the NRW system that is in the RP-1 service area, the 24% value was used.

4.3 Customer Base

As stated above, connection fees are calculated by dividing the monetary value of the existing and/or future system by the number of existing and/or future customers. The number of customers is typically expressed as equivalent dwelling units (EDUs).

4.3.1 Equivalent Dwelling Unit

An (EDU) is the measure of a customer's impact on the wastewater system as a ratio to the impact of a typical single-family residence. A commercial customer's impact is calculated based on this ratio while a single-family residence is assumed to have the impact of exactly one EDU. The number of EDUs in the wastewater system is calculated through a series of steps.

1. Determine the EDU flow and loading assumptions.
2. Allocate the existing and future assets to existing customers and future users. This is explained in sections 1.1 and 4.4 regarding the Value of Future System and Value of Available System.
3. Allocate assets to the billable constituents of flow, BOD and TSS. This is explained in Valuation of Physical Assets section of this report.
4. Determine the System flow and Loadings.
5. Determine the Asset Allocation Factors.

6. Calculate the number of EDUs.

4.3.1.1 EDU flow and Loadings Assumptions

The first step is to determine the appropriate values assumed flow, BOD, and TSS for a single-family residence. Due to the effect of conservation efforts, appliance efficiencies, and construction approaches, the per capita water consumption has trended downwards since the last time the Agency calculated single-family residential water consumption and wastewater flow. Utilizing the common assumption that single-family indoor water usage can be used as a proxy for single-family wastewater flows, it can be assumed that single-family wastewater flows have decreased in proportion to the decrease in indoor water consumption. In order to incorporate these effects, Carollo utilized a new indoor water consumption forecast provided by the Agency to represent wastewater flow per EDU. In the Integrated Resources Planning document, the Agency provided an indoor water consumption estimate of 55 gallons per capita per day (gpcd) that was utilized in this calculation to represent wastewater flow, from 2015 through 2035. The Agency also provided projections of singe-family residential units and densities through the year 2035. This data was used to calculate a weighted average of wastewater flows per single-family residence of 195.25 gpcd in Table 4.8.

Table 4.8 Updated Unit flow Assumption

Year	SFR Units	SFR Density	SFR flow, gpcd	SFR Unit flow, gpd
2015	170,447	3.58	55	196.9
2020	178,394	3.52	55	193.6
2025	187,488	3.54	55	194.7
2030	197,642	3.55	55	195.25
2035	207,794	3.56	55	195.8
Weighted Average SFR Unit flow				**195.25**

While this calculation illustrates a decrease in EDU wastewater flows from the prior assumption of 270 gpd, which is the basis of IEUA's contract with its Member Agencies, it is important to note that the per capita loadings are assumed to remain constant. Although Agency customers are consuming less water, the quantity of loadings into the system per capita have not decreased. Therefore, single-family BOD and TSS loading concentration assumptions must be adjusted in order to compensate for the decrease in the flow assumption from 270 to 195 gpd. The BOD and TSS Loading/day assumptions listed in the "Updated" column of Table 4.9 represent the new assumptions utilized in the EDU calculations.

Table 4.9 Updated Unit Loading Assumptions				
	Current		Updated	
Constituent	Concentration	Loading/day	Concentration	Loading/day
flow	270 gpd	270 gpd	195 gpd	195 gpd
BOD	230 mg/L	.518 lbs/day	318 mg/L	.518 lbs/day
TSS	220 mg/L	.496 lbs/day	304 mg/L	.496 lbs/day

4.3.1.2 System flow and Loadings

Using the system flow values and projections in conjunction with influent loading concentrations at each regional water recycling plant, as developed in the Facilities Master Plan, the current and projected loadings totals at each plant can be calculated. These calculations are presented in detail in Appendix D. Table 4.10Total Loadings presents the current and projected flow and loadings totals.

Table 4.10 Total Loadings			
	flow, mgd	BOD, lbs/day	TSS, lbs/day
Current	55.7	186,386	182,492
Future	73.5	240,078	232,751
Increase	17.8	53,692	50,259

4.3.1.3 Wastewater EDU Calculation

The equation below shows the calculation that is used to determine the number of EDUs in the current IEUA wastewater system. It incorporates the updated EDU flow and loadings assumptions, the current system flow and loadings totals, and the asset allocation factors presented above (flow: 44%; BOD: 34%; and TSS: 21%).

$$EDUs = Flow\% * \frac{current\ flow}{flow\ per\ EDU} + BOD\% * \frac{current\ BOD}{BOD\ per\ EDU} + TSS\% * \frac{current\ TSS}{TSS\ per\ EDU}$$

Future EDUs are calculated with the same formula using the increase in flow and loadings totals from Table 4.10 instead of the current flow and loadings totals.

Table 4.11 presents the results of these two calculations.

Table 4.11 Customer Base; Total EDUs	
Existing EDUs in System (Existing Customers)	328,459
Future EDUs (Users to join by 2035)	97,606
Total Customer Base in 2035	**426,066**

4.4 Value of the Future Users Share of the Existing System

As described above, the allocated share of the Value of the Available System was calculated proportionate to the remaining and available system capacity. Assets and future capital projects that equally benefit existing and future users are allocated proportionally based on the number of current and projected EDUs. Finally, future capital improvements that are undertaken strictly to provide future system capacity to serve future users are allocated strictly to future users.

The future users' share of the fixed assets, the reserves, and the property tax credit are shown in the section below.

4.4.1 Future Users' Share of Reserve Funds

There are expected to be 426,066 EDUs in the system by 2035, of which 97,606, or 23%, are new EDUs. Therefore, the future users benefit from 23% of the reserves. Table 4.12 presents the fund balances at the beginning of Fiscal Year 2014/15 as well as the future users' share of existing reserve fund balances.

Table 4.12 Future Users' Share of Reserve Funds		
Fund	**Balance**	**Future's Share**
Administrative Services (GG)	$14,554,155	$3,334,175
Non-Reclaimable Wastewater (NC)	4,502,755	1,031,525
Regional Wastewater Capital Improvement (RC)	60,856,307	13,941,419
Regional Operations and Maintenance (RO)	30,215,738	6,922,048
Total Wastewater (RO, NC, RC)	**$110,128,955**	**$25,229,167**

4.4.2 Total Value of Existing Wastewater System

The sum of the future users' share of the existing assets and reserves in the existing wastewater system is presented in Table 4.13.

Table 4.13 Total Value of Available System	
Wastewater Assets	$146,441,580
Wastewater Reserves	25,229,167
Construction in Progress	11,583,026
Total Value of Available System	**$183,253,772**

4.4.3 Property Tax Credit

The Agency provided a record of property tax receipts dating back to FY 1998/99. Over that period, the Agency collected $279 million in property tax revenue to fund wastewater O&M expenditures, debt service, and direct capital costs. $18.7 million of that amount was available for wastewater capital projects. After adjustment for inflation, using ENR-CCI, the present value of the recorded property tax receipts used to finance capital projects totals $25.0 million. This total was collected from the property tax of both developed and undeveloped properties. The Agency will only credit the portion that is associated with undeveloped properties. This credit is intended to adjust down the connection fee of the new connection by the amount that the undeveloped property has contributed to the existing system before connecting.

In order to estimate the share of the total amount of property taxes that was collected from undeveloped properties, it is assumed that the share is proportionate to the number of new EDUs to be constructed through 2035 relative to the total number of system users by 2035, which equates to 23%. Table 4.14 presents the results of this approach.

Table 4.14 Property Tax Credit	
Present Value of Recorded Property Tax Net of Debt and O&M	$24,975,327
% Contributed by Undeveloped Properties	23%
Contribution made by Undeveloped Properties	$5,721,535
New EDUs Through 2035 (Future Users)	97,606
Credit per New EDU (Future User)	$59

This is a fair and reasonable attempt at calculating the property tax credit based on the Agency's provided receipts since FY 1998/99. The percentage share of property tax that was paid for by vacant lots is unknown. This methodology represents a conservative approach by

overestimating the contributions of undeveloped properties since undeveloped properties contribute, on average, less than a developed property.

4.5 Proposed Connection Fees

Based on the defined Value of the Available System, the Value of the Future System (Capacity Related CIP), and the Number of Expected Future Users, the calculate the hybrid connection fee is as follows:

$$\textbf{\textit{Hybrid Connection Fee}} =$$

$$\frac{\textbf{\textit{Value of the Available System}}}{\textbf{\textit{Expected Future Users}}} + \frac{\textbf{\textit{Capacity Related CIP}}}{\textbf{\textit{Expected Future Users}}} =$$

$$\frac{\textbf{\textit{Value of Available System}}}{\textbf{\textit{Expected Future Users}}} = \frac{\$177,532,237}{97,606} = \$1,819$$

$$\frac{\textbf{\textit{Capacity Related CIP}}}{\textbf{\textit{Expected Future Users}}} = \frac{\$436,326,332}{97,606} = \$4,470$$

The hybrid connection fee is shown below.

$$\textbf{\textit{Hybrid Connection Fee}} = \$1,819 + \$4,470 = \$6,289$$

5.0 SUMMARY

In summary, the wastewater connection fee is proposed to be increased from $5,107 per EDU to $6,289 per EDU. Table 5.1 shows the detailed calculation of the charge.

Table 5.1 Summary Connection Fee Calculation	
Buy-In Portion	
RCNLD	$146,441,580
Reserves	25,229,167
Construction in Progress[(1)]	11,583,026
Less Property Tax Revenue	(5,721,535)
Subtotal: Reimbursement Value	*$177,532,237*
Customer Base	
Future Users	97,606
Buy-In Fee	**$1,819**
Incremental Portion	
Sum of Growth Related Costs by 2035	436,326,332
Customer Base	
Future Users	97,606
Incremental Fee	**4,470**
Total Hybrid Connection Fee	$6,289

Notes:

(1) Has not been adjusted for additional construction costs since 2012/13 and the total is entirely allocated to future wastewater users.

APPENDIX A – COST ALLOCATION

1.0 INTRODUCTION

The purpose of this appendix is to allocate the capital costs of the Inland Empire Utilities Agency (IEUA) wastewater facilities to the billable constituents of wastewater flow, oxygen demand, and Total Suspended Solids (TSS). These costs will subsequently be distributed to the individual users in proportion to the amount of billable constituents they contribute.

2.0 ALLOCATION OF BILLABLE CONSTITUENTS FOR EACH UNIT PROCESS

2.1 Overall Approach

In order to account for system costs and equitably charge wastewater dischargers for their use of the wastewater, treatment and disposal facilities, the treatment plant is divided into a number of unit processes. Capital and operating costs associated with each unit process can then be allocated among the users in proportion to their demand on the system. The basis for allocating capital costs to unit processes was to assess which constituent(s) determine the function of the unit process and/or cause capital costs to be incurred. In most cases, the basis of this determination is directly related to design criteria.

2.2 Unit Process Designations

2.2.1 Capital Costs

Capital costs can appropriately be allocated among the billable constituents through the design criteria for sizing (and therefore, the cost) of the facility. Typically, the controlling design flow and/or loading condition is the maximum month flow and/or load which the facility must accommodate. However, for some facilities (e.g., anaerobic digestion) annual average conditions more closely reflect the facility's sizing and associated capital costs.

The proposed listing of treatment processes and the associated percentage allocation to each billable constituent for distributing capital costs are shown in the table below. There are many items in the IEUA CIP that cannot be directly attributed to a unit process. In those cases, the allocations are done as indirect costs or "As All Others." These costs are allocated to the billable constituents using the cost-weighted percentages of the accumulated processes.

Unit Process	Flow	BOD	TSS
Preliminary Treatment	100	0	0
Primary Clarifiers	80	0	20

Unit Process	Flow	BOD	TSS
Activated Sludge	0	100	0
Secondary Clarifiers	80	20	0
Tertiary Treatment	100	0	0
DAF Thickening	0	100	0
Gravity Thickening	0	0	100
Anaerobic Digestion	0	45	55
Sludge Dewatering	0	45	55
Sludge Disposal	0	45	55

2.3 Process Breakdown

2.3.1 Preliminary Treatment

2.3.1.1 Capital Cost Allocation

Although the purpose of the preliminary treatment process is to remove solids, design criteria for sizing screens and grit basins are based on flow. Therefore, the capital costs should be allocated primarily to flow. The net capital cost allocation for this category is 100 percent to flow.

2.3.2 Primary Clarifiers

2.3.2.1 Capital Cost Allocation

Although the purpose of the primary treatment process is to remove TSS, the capital costs that are incurred for this process category are primarily determined by the amount of flow that must be treated. The design criteria for sizing primary sedimentation tanks are based on overflow rates. Therefore, the tankage (structural) costs, which are about one-third of the total capital costs of these processes, are allocated to the flow component. The controlling overflow rate that affects the costs in this case is that provided by the average flow. A portion of the influent BOD is removed by this process because it is exerted by the solids that are removed in the primary sedimentation process. However, oxygen demand is a relatively poor indicator of the capital costs that are incurred for this process. Therefore, the capital costs were allocated 100 percent to flow.

The majority of the capital costs associated with the primary sludge pumping equipment have been allocated to TSS. Seventy percent of the equipment capital costs of this process category have been assigned to TSS and the remaining 30 percent to flow. The net capital cost allocation for this process category is about 80 percent to flow and 20 percent to TSS.

2.3.3 Activated Sludge

2.3.3.1 Capital Cost Allocation

The sizing of activated sludge facilities can be hydraulically or organically (BOD) controlled. In this case, the high organic loading to the plant results in the sizing being driven by the organic loading criteria. Structural and equipment costs directly associated with the tank size should, therefore, be assigned solely to the BOD billable constituent. Aeration equipment costs are directly controlled by the organic loading to the tanks and are also assigned entirely to the BOD billable constituent. Structural and equipment costs attributable solely to the flow component are minor compared to the aeration equipment. For this reason, the recommended capital cost allocation for this process is 100 percent to BOD.

2.3.4 Secondary Clarifiers

The purpose of the secondary clarifiers is to settle the sludge generated by the biological treatment system and return it to the activated sludge process. Removal of excess sludge from the system is also done at this stage. Principal components of this process include the sedimentation tanks, sludge collection mechanisms installed inside of the tanks, and the return and waste sludge pumps, valves, and piping.

2.3.4.1 Capital Cost Allocation

Secondary sedimentation tank sizing criteria are generally concerned with the flow and the amount of sludge that they must handle. The amount of sludge is a direct function of the organic load to the activated sludge process as expressed by the BOD constituent and the overall plant flow rate. Equipment costs are also a function of the flow and organic load to the system. For this reason, capital cost allocations for this process should be divided between flow and BOD.

The relative cost allocations between the flow and BOD constituents were based upon a typical cost breakdown of these facilities. Structural costs represent about 40 percent of the original cost of the facilities while the remaining 60 percent is for the equipment. The controlling criteria for the size of the tankage and associated channels and hydraulic control systems for this process is flow. Therefore, the structural costs would be allocated entirely to the flow component. Equipment costs result from both the amount of flow that must be handled and the amount of solids carried in the process. The solids in the process are directly related to the amount of BOD applied to the secondary treatment system. The equipment costs have been allocated to equal parts for flow and BOD. The mechanisms in the clarifiers are sized based upon the tankage (flow controlled) and the amount of sludge that they must handle (BOD controlled). Return sludge pumping system sizing is a function of the total flow to the process and the amount of sludge maintained in the process so the costs for this portion should be allocated to both. Waste sludge pumping system sizing, on the other hand, is a function of the amount of sludge that must be removed from the system which is directly attributable to the BOD load to the secondary treatment system. The net capital cost allocation for the secondary clarifiers is then estimated to be about 80 percent for flow and 20 percent for BOD.

2.3.5 Tertiary Treatment

2.3.5.1 Capital Cost Allocation

Design criteria for tertiary treatment is entirely based on flow. For this reason, all capital costs are allocated to the flow component.

2.3.6 Gravity Thickening

Capital costs for this unit process are assigned 100 percent to TSS. The sizing of all structural and mechanical components of this system are based upon the amount of sludge the thickeners receive from the primary clarifiers, which is attributable to the amount of TSS removed in the primary clarifiers.

2.3.7 DAF Thickening

2.3.7.1 Capital Cost Allocation

Capital costs for this unit process are assigned 100 percent to BOD. The sizing of all structural and mechanical components of this system are based upon the amount of sludge the thickeners receive from the secondary treatment system, which is attributable to the solids produced from the removal of the BOD during secondary treatment.

2.3.8 Anaerobic Digestion

2.3.8.1.1 Capital Cost Allocation

Digestion processes can be sized based either on hydraulic detention time or an organic loading rate expressed in terms of pounds of solids per unit volume per day. At IEUA, the hydraulic criteria controls the need for total digester volume. For this reason, capital costs will be directly proportional to the hydraulic quantities of sludge received from the primary (TSS) and secondary (BOD) treatment systems. For this reason, an allocation of 45 percent to BOD and 55 percent to TSS has been made.

2.3.9 Sludge Dewatering

2.3.9.1 Capital Cost Allocation

The capital costs for sludge dewatering facilities are directly attributable to the amount of sludge that much be processed. Costs were allocated in proportion to the amount of primary sludge and secondary sludge generated. This results in an allocation 45 percent to BOD and 55 percent to TSS.

2.3.10 Sludge Disposal

2.3.10.1 Capital Cost Allocation

The capital costs for sludge disposal are directly attributable to the amount of sludge that much be processed. Costs were allocated in proportion to the amount of primary sludge

and secondary sludge generated. This results in an allocation 45 percent to BOD and 55 percent to TSS.

2.3.11 Indirect Costs

Indirect costs are costs that cannot be readily assigned to any specific unit process. Typical indirect capital costs include: land occupied by the treatment plant; administration, laboratory and staff support facilities; maintenance shops; odor control equipment; and etc.

Allocation of the indirect capital costs to the billable constituents is based upon the net allocation of the assignable costs to the billable constituents, which is based on a weighted average allocation of the costs to the known unit processes.

CHKD. BY _____ DATE _____ Fees JOB NO. 9614A.00

The pages that follow present calculations to determine the percentage of existing and future facilities at the IEUA treatment plants that should be allocated to growth. The calculations are based on flows and capacities of existing facilities that are outlined in the TMs from the Wastewater Facilities Master Plan (WFMP). The applicable TMs are TMs 3, 4, 5, 6, and TM 7 and are located in the deliverables folder of the Projectwise CA/IEUA/9370 A00 project.

The calculations are based on the overall assumption that excess plant capacity is for growth/expansion. IEUA has 4 plants: RP-1, RP-4, RP-5 and CCWRF, plus RP-2, which will be deactivated and relocated to RP-5.

Engineers...Working Wonders With Water™

CHKD. BY ____ DATE ____ JOB NO. 9614A.00

Purpose: Determine the capacity of RP-1 that will be for growth and the capacity that will be for existing customers

Assume

1. The capacity of RP-1, primary and secondary facilities is 32 mgd once MLR pumps are added to the aeration basins. Without the MLR pumps the capacity is 28 mgd.

2. Current inflow to RP-1 is 28 mgd so once the MLR pumps are added, assume the capacity for growth is $4/32 = 13\%$ and the capacity for existing customers is 87% for secondary treatment

3. For Filtration RP-1 capacity is 43.8 mgd current flow to RP-1 is 28 mgd so the capacity for growth is $\frac{43.8-28}{43.8} = 36.1\% \rightarrow 36\%$

4. For Disinfection RP-1 capacity is 49.8 mgd current flow to RP-1 is 28 mgd so the capacity for growth is $\frac{49.8-28}{49.8} \approx 44\%$

5. For PS thickening RP-1 capacity is 43.3 mgd current flow to RP-1 is 38.5 mgd [based solids from RP-1+RP-4] so the capacity for growth is $\frac{43.3-38.5}{43.3} \approx 11\%$

Purpose: Determine the capacity of the IERCF Facilities for growth and for existing customers

Assume:

1. The IERCF facilities are generally large enough to handle the peak flows for it through the 2060 planning period. On that basis, current flow to the IEUA facilities is 55.2 mgd. Projected flow in 2060 is 87.9 mgd. So the capacity available for growth is 37%.

Purpose: Determine the capacity of the IEUA collection system for growth and for existing customers

Assume:

1. The collection system can generally handle flows through the 2035 planning period (except the Mintel in Line). The current flow to the IEUA facilities is 55.7 mgd. Projected flow in 2035 is 73.5 mgd. So the capacity available for growth is 24%.

Purpose: Determine the amount of the costs for the Haven LS expansion, Haven LS upgrades, Whispering Lakes LS upgrades and Mantelair Interceptor line improvements that are for growth

Assume: All of these projects are to delay expansion of RP-5 in order to accomodate growth so they will be allocated 100% to growth

Purpose: Determine how to allocate the costs to growth of general or agencywide capital projects

Assume: Costs will be allocated to growth for these general and agencywide projects based on the average of all other agency project allocations

BY TW DATE 10/23/14 SUBJECT IEUA Connection Fees SHEET NO. 9 OF 15
CHKD. BY ____ DATE ____ JOB NO. 9614A.00

Purpose: Determine the capacity of the RP-2/RP-5 Solids Relocation that will be for existing customers and what will be for growth

Assumptions:

1. Existing Capacity of RP-2 solids will be based on digestion capacity and assumed for all other solids processes (e.g., thickening, dewatering).
2. Further costs for the new facilities at RP-5 will be allocated based on the growth/existing capacity ratio of the RP-5 digesters.
3. Exist RP-2 solids capacity is 18.0 mgd, based on Table 7-9 in TM 7 from Master Plan
4. Exist Flow to RP-2 solids is based on an influent flow of 17.2 mgd (7.2 ccwRF, 10.0 mgd RP-5)
5. The amount of the existing solids facilities that is available for growth is 18.0 - 17.2 = 0.8 mgd

Carollo
Engineers...Working Wonders With Water™

BY TW DATE 10/24/14 SUBJECT IEUA Connection Fees SHEET NO. 10 OF 15
CHKD. BY ____ DATE ____ JOB NO. 9614A.00

6. 3 new digesters for duty capacity will be built as part of the solids relocation - an additional digester will be built for standby capacity

- each digester will be 90' diameter and 35' SWD
- The digester volume is 1,665,500 gal.
  3 digesters volume is 4,996,500 gal.
- with a 15 day detention time each digester can accomodate 333,100 gpd
- flow in 2035 @ CCWRF is 7.3 mgd
  flow in 2035 @ RP-5 is 20.2 mgd > 27.5 total
- Sludge flow for 27.5 mgd is 288,000 gpd @ 6%
- Sludge flow per mgd is $\frac{288,000}{27.5} \cong 10,475$ gpd/mgd
- Since Digesters can handle 333,100 gpd then capacity is $\frac{333,100}{10,475} = 31.8$ mgd

carollo
Engineers...Working Wonders With Water™

BY TW DATE 10/24/14 SUBJECT IEUA Connection Fees SHEET NO. 11 OF 15
CHKD. BY _____ DATE _____ JOB NO. 9614A.00

7. Based on calculations

- new RP-5 solids in 2035 will be 31.8 mgd
- of the 31.8 mgd capacity, 17.2 mgd is for existing customers

$\frac{17.2}{31.8} \cong 55$ % for existing customers

therefore $\cong 45$ % for growth (new customers)

BY TD DATE 10/27/14 SUBJECT IEUA Connection Fees SHEET NO. 12 OF 15
CHKD. BY ____ DATE ____ JOB NO. 9616A.00

Purpose: Determine the portion of the RP-1 primary effluent equalization that will be for growth

Assumptions:

1. The capacity of the existing secondary processes @ RP-1 is 28 mgd, based on using the existing equalization basins (EQ)
2. Three secondary clarifiers are necessary to allow the primary EQ basins to be eliminated
3. The current RP-1 flow is 28 mgd, so there is currently no excess capacity
4. Assuming that the new secondary clarifiers do not add capacity beyond that required to replace the capacity lost by removing primary EQ then this project would be all for replacement and all rate payers would contribute to the costs.
5. An RP-1 capacity of 28 mgd assumes that MLR pumps have not been added and the costs for that project should be included in

BY TW DATE 10/27/14 SUBJECT IEUA Connection Fees SHEET NO. 14 OF 15
CHKD. BY ____ DATE ____ JOB NO. 9414A.00

Purpose: Determine the capacity of the RP4 tertiary project that will be for existing customers and what will be for growth

Assumptions

1. Capacity of the existing RP-4 tertiary units is 14.1 mgd.
2. Current annual influent flow to RP-4 is 10.5 mgd
3. The amount of the existing tertiary capacity that is available for growth is
   $14.1 - 10.5 = 3.6$ mgd
4. The new filters that will be built for the RP-4 expansion will add 2.4 mgd of capacity
5. $\frac{3.6}{14.1}$ = 26% of the existing filter capacity is for growth
6. Since there is excess capacity for the filters all of the new filters will be for growth.

carollo
Engineers...Working Wonders With Water®

BY TW DATE 12/3 SUBJECT TEUA Connection Fees SHEET NO. 15 OF 15
CHKD. BY ____ DATE ____ JOB NO. 9614A.00

Purpose: Determine the capacity of the RP-1 liquid and solids treatment expansion and the capacity of the RP-5 liquid treatment expansions that will be for growth

Assume:

1. Both RP-1 and RP-5 both have excess treatment capacity as follows:

	Exist. Cap.[1]	Exist Flow[2]	
RP-1 liquids	32.0	28.0	
RP-1 solids	38.0	38.0	includes solids flow from RP-4
RP-5 liquids	15.0	10.0	

(1) from 2014 WFMP TMs 5 and 7

(2) from 2014 WFMP TM 4

For this reason the future projects that add capacity to RP-1 and RP-5 will be for growth/expansion

-	TBD	RM	Belt Conveyor Improvements	$ 1,200,000	37%	63%	11	0%	45%	55%	0%
✓	TBD	RM	Misc Fan Improvements	$ 1,300,000	37%	63%	11	0%	45%	55%	0%
Total Projects				**$ 829,377,911**	**53%**	**47%**					

Unescalated Growth Total
$ 437,023,184

General Notes:

The projects that are listed in this table are all the capital projects from the twenty-year CIP. Regardless of which fund they are categorized as in the table, they have been allocated to projects for existing users and future users (growth). This allocation was completed using the methodology described in Appendix A. The fund classifications have no bearing on each project's allocation. The total of the growth related costs ($437,023,184) is the portion of the total CIP that is allocated to the connection fee.

95% of the GG Fund projects costs are allocated to the wastewaterconnection fee. This represents the approximate share of all Agency assets that are related to the wastewater system.

Notes:
(1) Assumes 1/2 for WAS thickening (35%) and 1/2 for primary sludge thickening (19%)
(2) Assumes 1/2 for EQ basins (13%) and 1/2 for Odor (24%)
(3) Assumes 1/2 for TWAS (18%) and 1/2 for Primary Effluent (13%)

APPENDIX D – SYSTEM FLOW AND LOADINGS CALCULATIONS

1.0 INTRODUCTION

The purpose of this appendix is to calculate the current and future system loadings of the Inland Empire Utilities Agency (IEUA) wastewater system. The results of this appendix constitute one of the three components of the Wastewater EDU Calculation.

Using the system flow values and projections in conjunction with influent loading concentrations at each regional water recycling plant, as developed in the Facilities Master Plan, the current and projected loadings totals at each plant can be calculated. These calculations are presented in detail below.

2.0 APPROACH

In the Facilities Master Plan, Carollo Engineers, Inc. has already calculated the current and projected flows for the Agency's wastewater system. However, to calculate the system loadings, this appendix will multiply the existing concentration data and the existing flow data.

3.0 DATA

3.1 Treatment Plant Projected Flows

As part of the Facilities Master Plan, Carollo Engineers, Inc. measured the current influent flow at each regional water recycling plant. Additionally, Carollo calculated a projection for each plant's flow by 2035.

Year	RP-1	RP-4	CCWRF	RP-5	**Total**
Current Flow, mgd	28	10.5	7.2	10	**55.7**
2035 Flow, mgd	33.1	14.7	7.3	18.4	**73.5**
Increase					**17.8**

Note (1) Current Flow is based on 2011-2013 data

3.2 Treatment Plant Current Concentrations

As part of the Facilities Master Plan, Carollo Engineers, Inc. conducted a study of each regional water recycling plant's influent concentrations. The results are presented in the table below.

Current Concentrations	RP-1	RP-4	CCWRF	RP-5
BOD, mg/L	434	352	455	321
TSS, mg/L	472	318	367	267

This appendix intends to produce a value in terms of pounds per day. Therefore, the milligram per liter concentrations above are converted into pounds per million gallon in the table below.

Current Concentrations	RP-1	RP-4	CCWRF	RP-5
BOD, (lbs/MG)	3,622	2,937	3,797	2,679
TSS, (lbs/MG)	3,939	2,654	3,063	2,228

4.0 LOADINGS CALCULATION

The total current wastewater system loading values for BOD and TSS are the sum of each plant's current BOD and TSS loading total. Each plant's current BOD total is calculated by multiplying its recorded BOD concentration in pounds per million gallons by the daily flow in millions of gallons per day. The formula below presents the calculation of each plant's BOD total.

$$BOD\ lbs/day = BOD\frac{lbs}{MG} * \frac{MG}{day}$$

Each plant's current TSS total is calculated in the same way. Future BOD and TSS loadings are calculated similarly. The one difference is that the future loadings calculations utilize each plant's 2035 projected flow value instead of the current value. The table below presents the results of these calculations as well as the wastewater system total. Additionally, the table presents the increase in the system loadings totals within the given timeframe.

Current Loadings	RP-1	RP-4	CCWRF	RP-5	Total
BOD, lbs/day	101,413	30,845	27,340	26,789	**186,386**
TSS, lbs/day	110,293	27,865	22,052	22,282	**182,492**
2035	RP-1	RP-4	CCWRF	RP-5	**Total**

Loadings					
BOD, lbs/day	119,885	43,182	27,719	49,291	**240,078**
TSS, lbs/day	160,382	39,011	22,358	40,999	**232,751**
Growth					**Difference**
BOD, lbs/day					**53,692**
TSS, lbs/day					**50,259**

1.0 INTRODUCTION

The Inland Empire Utilities Agency (IEUA or Agency) is a public agency serving the Inland Empire region as a regional wastewater agency, as well as a wholesale supplier of imported and recycled water. The Agency contracted with Carollo Engineers, Inc. (Carollo) to conduct a Connection Fee Study for the regional wastewater and water systems. This report details the purpose and cost basis of implementing a new water connection fee.

IEUA supplies water to retail agencies through both imported water supplied by the Metropolitan Water District of Southern California (MWD) and recycled water. Due to the increasing need for reliable water supplies and for future supplies necessary to meet the needs of growth, IEUA will continue to invest in localized water supplies and conservation. The proposed water connection fee accounts for IEUA's multi-facet approach to providing long-term water supplies, including local supply development, imported water supplies, expansion of recycled water facilities, and conservation. This report addresses the One Water connection fees.

The water connection fee study builds on the Agency's other planning efforts that are currently being developed. These efforts include the following:

- Integrated Resources Planning
- Recycled Water Program Strategy
- Recharge Plan Update
- Facilities Master Plan
- Energy Management Plan
- Asset Management Plan
- Long Range Plan of Finance
- Connection Fee/Rate Study

IEUA does not currently impose any water or recycled water connection fee. The objective of the connection fee study is to develop a fee based on current system values and proposed capital improvements; and to develop a new connection fee for the Agency's water system. In order to determine conformance with industry standards and principles, legal requirements, and the Agency Board policy, the following criteria were used in evaluating the validity of the connection fee process:

- Do the connection fees represent a reasonable nexus to the costs incurred by the Agency on behalf of future users and the benefits received?

- Is the allocation approach consistent with industry practices and California Government Code §54999.7 and §66013?
- Is it likely that the allocation approach will be appropriate for use by the Agency in the future?

The connection fee analysis is based upon a point in time calculation based on the Agency's Fixed Asset Schedule, FY 2014/15 IEUA Ten Year Capital Improvement Plan (CIP), projected potable water and recycled water consumption, and other Agency Data. This report presents Carollo's findings and proposed connection fee.

2.0 BACKGROUND

2.1 Potable Water System

The regional water service system is comprised of imported water, water produced from local sources, and other purchased water. Imported water has historically, and will in the future, generally be purchased from the Metropolitan Water District of Southern California.

- Chino Basin Desalter Plant – Groundwater is pumped from supply wells throughout the Chino Basin area to the Chino I Desalter and the Chino II Desalter. Together they produce 24.6 million gallons of potable water each day. IEUA operates the Desalters.

2.2 Recycled Water System

IEUA treats over 50 million gallons per day of wastewater at its regional treatment plants in accordance with Title 22 regulations then distributes some of the treated water as recycled water throughout the service area.

- Direct Usage Customers – The Agency currently delivers approximately 25,000 acre-feet per year of recycled water for direct usage by approximately 800 customers.

- Recharge Facilities – The Agency resides over the majority of the 5 to 7 million acre-foot groundwater storage basin called Chino Basin. IEUA recharges the basin with recycled water, imported water, and storm water.

3.0 CONNECTION FEE OVERVIEW

Connection fees are a method by which local agencies can impose charges to offset the costs of new customers connecting to their water, wastewater, or other utility or infrastructure systems. Connection fees are governed by California Government Code §66000, which provides a legal framework for the applicability, assessment, and imposition of connection fees. There are various methods to calculate connection fees; the most appropriate method for any system is dictated by the system's specific characteristics. The proposed connection fees represent the maximum fees that the Agency can impose based on the calculations as discussed in this report.

3.1 Statutory Requirements

A connection fee that is levied on users of a water utility is subject to the requirements of Chapter 13.7 (commencing with Section §54999) of Part 1 of Division 2 of Title 5 of the California Government Code relating to the imposition of charges on customers that are public agencies. Connection fees are also subject to the requirements of Government Code §66013. Connection fees are "charges for facilities in existence at the time the charge is imposed or charges for new facilities to be constructed in the future, which are of benefit to the person or property being charged." Section §66013 provides that connection fees "shall not exceed the estimated reasonable cost of providing the service for which the fee or charge is imposed." Section §54999.7 establishes a similar cost-of-service requirement. As determined by *Richmond v. Shasta Community Services Dist. (2004) 32 Cal. 4th 409*, Connection fees are not subject to the provisions of California Constitution article XIII D (Proposition 218). A connection fee is imposed on new connections in order to recover a fair and equitable share of the costs of capacity within the utility facilities. A key tenet in adopting these connection fees is: "growth pays for growth." This means that the costs associated with building excess capacity to serve new customers ultimately should be borne by those new users who benefit from this available capacity.

3.2 Connection Fee Methodologies

Two general types of connection fees are used to recover system investments from new users. There is the System Buy-In Approach and the Incremental Cost Approach. Additionally, utilities can elect to use a Hybrid Approach that combines the Buy-In and Incremental Approaches. While all are valid, the best approach is dictated by each system's specific characteristics.

3.2.1 Buy-In Approach

Utilities often construct infrastructure capacity to meet projected future demands. The purpose of the Buy-In approach is to recover costs that have already been incurred by the Agency. Existing customers have paid for this system over time through their user rates and fees (through direct capital financing or retired debt). The Buy-In approach provides a mechanism to reimburse existing system users for the carrying costs of constructing system capacity that is available to be used by future users. In this sense, the Buy-In approach estimates the fraction of the existing system that will benefit future users.

There are further considerations when calculating the Buy-In approach. Given that the existing system was constructed over time, the original cost of constructing the system neither accurately reflects the current value of that system nor the cost to construct the facilities today. Consequently, original costs were escalated to (Fiscal Year) FY 2014/15 dollars using Engineering News Records Construction Cost Index (ENR-CCI). The Agency's FY 2012/13 fixed asset records were used as the basis for this analysis, which included original costs, acquisition dates, and estimated useful lives.

Replacement costs alone might not be the best estimate of system value, because system assets have a finite lifespan and must be replaced and/or rehabilitated in time. The Agency adjusts the existing cost basis by deducting straight-line depreciation. Accumulated depreciation is determined by dividing the age of each asset by the projected useful life and reducing the asset value by that percentage. By accounting for accumulated depreciation in the Buy-In cost approach, the Agency may recover a proportionate value of capital improvements that will replace depreciated assets or will be undertaken to extend the useful lives of these assets through the future cost component of the connection fee.

The Buy-In approach should not include costs of assets that were grant-funded or donated assets and should only include those costs incurred by the Agency ratepayers for the development of the existing system, which includes the accumulation of fund reserves as well as expenses associated with construction in progress.

Finally, in the calculation of the Buy-In approach, the existing system value is segregated into the portions for existing customers and future users. This is achieved by dividing the total value of the entire system over all projected users by buildout. Because the existing customers have already paid their share of costs through prior connection fees and rates, only the future users pay their fraction of costs upon connecting to the system.

The Buy-In approach divides the value of the existing system that benefits future users by the number of future users that are expected to benefit from the system in order to calculate the connection fee.

$$\textbf{\textit{Buy In Connection Fee}} = \frac{\textit{Value of System Benefitting Future Users}}{\textit{Expected Future Users}}$$

3.2.2 Incremental Approach

The Incremental approach recovers the cost in present value (FY 2014/15) dollars of the Agency's planned investments that it will undertake to add to serve future development. Projects included in the Agency's capital improvement program have two primary purposes – maintain reliability of existing infrastructure; and increase system capacity. In the Incremental approach, the future system value is segregated between those two purposes. The costs of each project are associated in some percentage to either or both of these purposes. This is achieved by determining the approximate portion of each asset that benefits either existing customers or future users. In the incremental approach, the current value of planned capital improvements that will serve future users through the Agency's planning horizon of 2035 is divided by the expected number of future users through 2035.

The future cost basis accounts for capacity related improvements that will be constructed through 2035. The costs of these improvements are estimated in present value terms (FY 2014/15 dollars). Costs are fairly and reasonably spread over all future users by dividing the

total system value by the total number of future users that are projected to receive water service by 2035.

$$Incremental\ Capacity\ Fee = \frac{Capacity\ Related\ CIP}{Expected\ Future\ Users}$$

3.2.3 Hybrid Connection Fee Approach

The Hybrid (Combined) Approach combines the Buy-In and Incremental approaches. Current system value is added to the costs of capacity related capital projects, and divided by the expected future customers.

$$Hybrid\ Connection\ Fee = \frac{Value\ of\ System\ Benefitting\ Future\ Users}{Expected\ Future\ Users} + \frac{Capacity\ Related\ CIP}{Expected\ Future\ Users}$$

3.2.4 Recommended Approach

Based on the characteristics of the Agency's water system and discussion with Agency Staff, Carollo recommends that the hybrid approach be used for the calculation of the water connection fee. Both the IEUA's potable water system and recycled water system hold available capacity that has been funded by existing users, which drives the need for a Buy-In component. Additionally, the CIP is designed to expand system capacity, calling for an incremental component. Using the hybrid approach establishes a nexus between the value of the existing and future system, and between the benefits of capital investments to existing customers and future users. The hybrid approach is commonly utilized by other agencies such as the comparable agencies of the City of Riverside, Sacramento Regional County Sanitation District, and the San Diego County Water Authority.

4.0 WATER CONNECTION FEE

In order to calculate the Water connection fee for IEUA, based on the equation presented above, three separate steps must be taken as follows:

1. The Value of the Existing System must be determined. This includes determining the value of the existing assets.
2. The Value of the Future System, or synonymously the Capacity Related CIP, and the portion allocated to future users must be determined.
3. The Customer Base must be determined. This includes the number of Expected Future Users by buildout and the number of Total Users by buildout.

The following sections of the report outlines each of these steps.

4.1 Value of the Existing System

This section presents the value of the combined existing system and accounts for fixed assets, construction in progress, reserves, and contributions from grants and the Chino Basin Watermaster (CBWM).

4.1.1 Net Capital Asset Equity

Net capital asset equity represents the current value of the physical water systems funded by existing ratepayers, less accumulated depreciation. This approach accounts for the fact that system assets have been in service and no longer have the full useful life. The terms related to the calculation of net capital asset equity are defined as shown below.

1. Replacement Cost New- Current value of the existing water or sewer system. Original costs are escalated to FY 2014/15 dollars using Engineering News Record Construction Cost Index (ENR-CCI).
2. Construction in Progress- capital projects currently under construction, not captured in the Existing Plant-In-Service asset records.
3. Capital Costs Not Funded by Existing Ratepayers- These include developer-funded assets and are excluded from the ratepayers' equity calculation.
4. Depreciation- Represents the loss in value of the system as the useful life of that asset is exhausted.

Throughout the remainder of this report, the value of the physical system will be referred to as Replacement Cost New Less Depreciation (RCNLD).

4.1.1.1 Valuation of Physical Assets

The RCNLD represents the value of each system's physical assets. The RCNLD for each system was calculated based on the Agency's Fixed Asset Schedule (physical asset records). The RCNLD of all Agency Fixed Assets are summed into different assigned asset groups. Table 4.1 presents the RCNLD for the water system. The value of the RCNLD that is benefitting future users is based on the ratio of existing to total future MEUs.

Table 4.1 Value of Fixed Assets

System	RCNLD ($ million)	Value Benefitting Future Users[1]
Water	$55.5	$10.3
Recycled Water	147.5	27.2
Total	**$203.1**	**$37.5**

Notes:

(1) Future users' benefit calculated based on the percentage of all MEUs, by buildout, that will be new (connected after 2015), 18%.

It is important to note that the value of the existing system assets have been reduced by depreciation in order to prevent double counting of asset values. The calculations for these allocated asset values are included in Appendix A.

4.1.2 Construction in Progress

The Agency's Construction in Progress are costs associated with the portion of Capital Improvement Plan projects that have been expensed. However, the projects are not yet recorded as Fixed Assets. These can include construction-in-progress projects as well as projects completed in a fiscal year. In this case we are concerned with projects from FY 2013/14 because they are projects that are not included in the fixed asset list described above and are also not included in the future capital projects, which will be described below. We have allocated these projects to growth and existing users on a project-by-project basis in the same fashion that the fixed assets were allocated. Table 4.2 below presents the results of these calculations. A listing of these projects is included at the end of Appendix B.

Table 4.2 Construction in Progress & Completed Projects FY 2013/14

Fund	Total Construction in Progress Costs ($ millions)	Costs Allocated To Growth ($ millions)	Costs Allocated to Existing Customers ($ millions)
Recycled Water (WC)	$29.0	$5.7	$23.4
Recharge Water Fund (RW)	0.5	0.1	0.4
Water Resources Fund (WW)	0.2	0.0	0.1
Total Cost	**$29.8**	**$5.8**	**$24.1**

4.1.3 Reserves

The fund balances at the beginning of FY 2014/15 in the Water Resources Fund make up the potable reserves component of the value of the existing water system. The Recycled Water Fund and the Recharge Water Fund together make up the recycled reserves component. Additionally, portions of the Administrative Service Fund, proportionate to the percentage of all Fixed Assets that are associated with the potable water and recycled water systems, are included in the value of the combined existing water system. These portions of the Administrative Service Fund are included because they are assets that future users benefit from that have already been paid for by existing users. Other funds, which have not been included within this connection fee calculation, are associated with the wastewater system. Table 4.3 presents the water fund balances at the beginning of FY 2014/15.

Table 4.3 Reserves

Fund	Balance ($ million)	Value Benefitting Future Users[1]
Water Resources (WW)	$1.3	$0.2
Recycled Water Fund (WC)	17.3	3.2

Table 4.3 Reserves		
Fund	**Balance ($ million)**	**Value Benefitting Future Users[1]**
Recharge Water (RW)	3.4	0.6
Administrative Services (GG)	5.3	1.0
Total Water Reserves	**$27.3**	**$5.0**
Notes:		
(1) Benefit calculated based on the percentage of all MEUs by Buildout that are new, 18%.		

Each reserve balance represents monetary value that a new user buys into when they join the system. Therefore, reserves are assets that are divided amongst both the existing customers and future users in the system. After estimating the number of future users in the system in a later section, the future users' share of the reserve balances can be calculated. The funds are assets that benefit both existing customers and future water users. Therefore, they are included in the value of the existing system as costs for which future users must reimburse existing customers.

4.1.4 Offsetting Revenues

4.1.4.1 Property Tax Credit

The Agency has not used property tax revenue to fund water system capital projects. Therefore, there is no credit for property tax collections from undeveloped properties.

4.1.4.2 Grant and Water Master Funded Projects

The Agency provided a summary of project costs from FY 2001/02 through FY 2013/14 that are eligible to be reimbursed by the Chino Basin Watermaster (CBWM). Additionally, data describing the value of grant funding over the same time period was provided. Each year's funding receipt was escalated to FY 2014/15 and summed. The present value of the grant and CBWM contributions are excluded from the value of the existing system because they represent values of fixed assets that were not funded by rate payers. Table 4.4 presents the total credit representing contributions made by outside sources.

Table 4.4 Outside Funding Contributions		
Source	**Escalated Contribution, $M**	**Value Benefitting Future Users[1]**
Grants	$36.2	$6.7
CBWM	3.7	0.7
Total	**$39.9**	**$7.4**
Notes:		
(1) Benefit calculated based on the percentage of all MEUs by Buildout that are new, 18%.		

4.2 Value of the Future System

4.2.1 Capital Projects

The value of the future system is determined by evaluating the capital investments that will expand system capacity in order to provide water supplies for future users. As noted previously, IEUA has developed several planning documents to help determine the need for capital investments. These documents include Capital Improvement Plans (CIPs) for both the water and sewer systems through 2035. Only the projects that provide a benefit to future users are included as a cost element in the calculation of connection fees.

The potable and recycled water CIP projects that are included in the calculation of the connection fee include the following:

- Potable:
  - Agency Headquarters maintenance and improvements
  - Conservation Programming
  - Planning Documents
  - Drought Resiliency Projects
- Recycled:
  - Agency Headquarters maintenance and improvements
  - Reservoir and Basin Improvements
  - Pipeline Capacity Upgrades
  - Hydraulic Modeling
  - Recharge Basin Construction

The future capital projects that add capacity specifically benefitting future development or upgrade the system in a manner that benefits both future and existing users are evaluated on a project-by-project basis to determine the amount that should be allocated to future users. Based on this approach, projects that are undertaken strictly to expand capacity for future users are allocated 100% to future customers. Appendix B presents the total project cost and allocation to future users of each CIP project. In Appendix B most of the projects are allocated based on the proportion of existing MEUs versus future total MEUs (identical to that which was completed for the existing assets). However, some projects are allocated based on a known proportion of capacity that is for existing users versus future users. For example, the RP-1 1158 Pump Station Expansion (about 1/2 way down in the Appendix B list of projects) has an existing capacity of 14 million gallons per day (MGD), the proposed expansion will increase it to approximately 32 MGD to have the ability to deliver all of the treated wastewater into the northern RW pressure zones. Project costs corresponding to existing customers is calculated to be 44% (14 / 32) and future customers 56% (18 / 32). A description of the other projects that are allocated in this way is included in Appendix B.

Table 4.5 summarizes the portion of the project costs, by fund, that are allocated to future users and that are planned for the Agency's water system through 2035. It should be noted that regardless of which fund the capital projects are listed in (e.g., WW, WC, RW) they are all capital projects and can have allocations to both existing and future customers (growth).

Table 4.5 Water Capital Improvement Projects			
Fund	**Total Water Project Costs ($ million)**	**Total Costs Allocated to Growth ($ million)**	**Total Costs Allocated to Existing Customers ($ million)**
Water Resources (WW)	$53.7	$7.7	$46.0
Recycled Water (WC)	151.4	80.9	70.5
Recharge Water (RW)	2.4	0.2	2.2
Administrative Services (GG)[1]	1.5	0.3	1.2
Total Projects	**$209.0**	**$89.1**	**$120.0**

Notes:

(1) 95% of the costs in the CIP that are both associated with the GG Fund and allocated to growth are spent towards projects to develop the wastewater system. 5% of the GG Fund costs are allocated to the water CIP. 5% of the GG Fund capital expenses are included here.

4.3 Customer Base

As stated above, connection fees are calculated by dividing the monetary value of the existing and/or future system by the number of existing and/or future customers. The number of customers is typically expressed as meter equivalent units (MEUs).

4.3.1 Meter Equivalent Units

The MEU is the measure of a customer's water consumption as a ratio to the consumption of a typical single-family residence. A commercial customer's impact is calculated based on this ratio while a single-family residence is assumed to have the consumption of exactly one MEU. The number of MEUs in the water system is calculated through the following steps:

1. Determine the MEU consumption assumption.
2. Determine the current water consumption in order to calculate the number of existing customers; and determine the projected water consumption in order to calculate the number of future users.
3. Calculate the number of MEUs.

4.3.1.1 MEU Water Consumption Assumption

The first step is to determine the appropriate assumed water consumption of a single-family residence. The local member agencies each provided account data describing their total number of accounts of each meter size. IEUA provided the assumed relationship between the

number of MEUs and meter size. The current calculated number of MEUs within the water system is 414,529. Appendix C presents the details of these calculations.

The Agency provided historical and projected potable and recycled water consumption. To calculate the consumption assumption per MEU, the combined water consumption was divided by the calculated total number of MEUs. Table 4.6 presents the results of this calculation.

Table 4.6 MEU Consumption Assumption	
Current Consumption, AFY	234,082[(1)]
MEUs	414,529[(2)]
AFY/MEU	0.56
gpd/MEU	500

Notes:
(1) Current consumption was estimated using actual 2013 and 2014 consumptions and growth rate.
(2) Includes MEUs for potable and recycled water connections.

The Agency and the member agencies provided historical water consumption and projected growth data. This information is presented in Table 4.7. Using this information and the calculated MEU consumption assumption, the new and total number of MEUs by buildout was calculated.

4.3.1.2 Total Water Consumption

Table 4.7 Water Customer Base			
	Existing, 2015	Total, 2035	New
Consumption Projection, AFY	234,082	287,082	53,000
Consumption Projection, mgd	209	256	47
MEU Consumption, gpd	500	500	500
MEUs	414,529	508,385	93,856

4.4 Proposed Connection Fees

Based on the defined Value of the Existing System, the Value of the Future System (Capacity Related CIP), and the Number of Expected Future and Total Users, the hybrid potable water connection fee is calculated as follows:

$$\textit{Hybrid Connection Fee} = \frac{\textit{Value of System Benefitting Future Users} + \textit{Capacity Related CIP}}{\textit{Expected Future Users}} =$$

$$\frac{Value\ of\ System\ Benefitting\ Future\ Users}{Expected\ Future\ Users} = \frac{\$40,951,523}{93,856} = \$436$$

$$+$$

$$\frac{Capacity\ Related\ CIP}{Expected\ Future\ Users} = \frac{\$89,059,698}{93,856} = \$949$$

The hybrid connection fee is shown below.

$$Hybrid\ Connection\ Fee = \$436 + \$949 = \$1,385$$

5.0 SUMMARY

In summary, the proposed water connection fee is $1,385 per MEU. Table 5.1 shows the detailed calculation of the charge.

Table 5.1 Summary Potable Water Fee Calculation	
Buy-In Portion	
RCNLD	$37,491,974
Construction in Progress	5,792,700
Reserves	5,031,408
Less: Grant and Water Master Funding	(7,364,559)
Subtotal: Reimbursement Value	*$40,951,523*

APPENDIX B – ALLOCATION OF PROJECT COSTS

1.0 OVERALL APPROACH

In order to account for system costs and equitably charge customers for their use of water, project costs must be distributed to the individual user in proportion to their water resource needs. Projects have been divided into two categories: the allocation available for existing users and the allocation necessary to accommodate future growth. Below is a summary of the methods for the allocation of projects to accommodate existing and future customers. Attached to this Appendix is IEUA's CIP which includes a complete list of projects, project costs, and cost allocations.

1.1 Meter Equivalent Basis (MEU)

This approach allocated the percent of the project based upon the total number of MEUs in the system belonging to existing and future customers. There are currently 414,529 existing MEUs in the system. Based upon demand forecasts, there will be an additional 93,856 new MEUs, or a total of 508,385 MEUs connected to the system by 2035. To equitably charge customers based upon their use of water, the portion of project costs corresponding to existing customers is calculated to be 82 percent (414,529 / 508,385), and the portion corresponding to future customers is 18 percent (93,856 / 508,385). Projects allocated under this approach are identified as MEU.

1.2 Project Expansion Basis

This approach allocated the percent of the project based upon the ratio of the existing to future facility capacity. Similar to the MEU basis, the project expansion basis allocates project costs to existing and future customers based on the portion of total future capacity that addresses the respective capacity requirements of existing and future demands. Multiple projects use this approach and their costs are allocated as follows:

1.2.1 RP-1 1158 Pump Station Expansion

The existing capacity of the pump station is 14 million gallons per day (MGD) while the proposed expansion will increase it to approximately 32 MGD as a means to deliver treated wastewater into the northern RW pressure zones. Project costs corresponding to existing customers are calculated to be 44 percent (14 / 32) and future customers 56 percent (18 / 32). Projects allocated under this approach are identified as 1158 Exp.

1.2.2 RP-5 800 Pump Station Modifications

The existing capacity of the discharge manifold is 10 MGD. The proposed piping modifications will increase it to approximately 12 MGD to eliminate existing velocity and pressure deficiencies. These projects are limited to improvements within the RP-5 facility. Project costs corresponding to existing customers are calculated to be 83 percent (10 / 12) and future customers 17 percent (2 / 12). Projects allocated under this approach are identified as 800 Exp.

1.2.3 RP-4 1299 Pump Station Expansion

The existing capacity of the pump station is 24 MGD. The proposed expansion will increase capacity to approximately 50 MGD with the ability to deliver all of the treated wastewater from RP-1 and 4 into the northern RW pressure zones. Project costs corresponding to existing customers are calculated to be 48 percent (24 / 50) and future customers 52 percent (26 / 50). Projects allocated under this approach are identified as 1299 Exp.

1.2.4 San Sevaine Basin Expansion

The existing RW recharge capacity of the basin is 500 acre-foot per year (AFY). The proposed expansion will increase this capacity to approximately 6,000 AFY with the ability to send RW to basins 1 thru 3. Project costs corresponding to existing customers are calculated to be 8 percent (500 / 6,000) and future customers 92 percent (5,500 / 6,000). Projects allocated under this approach are identified as SSV Exp.

1.2.5 RP-3 Basin Expansion

The existing RW recharge capacity of the basin is 6,500 acre-foot per year (AFY). The proposed expansion will increase it to approximately 9,400 AFY by constructing a new cell. Project costs corresponding to existing customers are calculated to be 69 percent (6,500 / 9,400) and future customers 31 percent (2,900 / 9,400). Projects allocated under this approach are identified as RP-3 Exp.

1.2.6 Victoria Basin Expansion

The existing RW recharge capacity of the basin is 1,600 acre-foot per year (AFY). The proposed expansion will increase it to approximately 1,800 AFY by constructing a new cell. Project costs corresponding to existing customers is calculated to be 89 percent (1,600 / 1,800) and future customers 11 percent (200 / 1,800). Projects allocated under this approach are identified as Vic. Exp.

1.2.7 Wineville Basin Expansion

This project will primarily serve the RP-3 basin for RW recharge. The current RW recharge deliveries to the RP-3 basin is approximately 1,000 AFY. The proposed pipeline will ultimately provide up to an additional 8,400 AFY after completion of the basin expansion, or total RW recharge deliveries of 9,400 AFY. Project costs corresponding to existing customers are calculated to be 11% (1,000/9,400) and future customers 89% (8,400/9,400). Projects allocated under this approach are identified WVB Exp.

1.2.8 Recharge Water (RW) Program Expansion

The current RW program delivers approximately 28,000 acre-foot per year (AFY). The proposed program expansion will increase deliveries to approximately 54,500 AFY. Project costs corresponding to existing customers are calculated to be 51 percent (28,000 / 54,500) and future customers 49 percent (26,500 / 54,500). Projects allocated under this approach are identified as RWP Exp.

1.3 Project Allocation to Existing Customers

This approach allocated the entire project cost to existing customers. Projects under this approach are primarily replacement, or R&R projects. Projects allocated under this approach are identified as Existing.

1.4 Project Allocation to Future Users

This approach allocated the entire project cost to future customers. Projects under this approach are primarily needed to provide additional capacity for increased water resource needs due to growth. Whereas the current facility can accommodate the existing customers water demand. Projects allocated under this approach are identified as Future.

2.0 CONSTRUCTION IN PROGRESS

Projects that are still under construction and recently completed are not yet included in IEUA's fixed asset schedule. Table 1 below presents a summary of the allocation of the value of projects that are still in progress as well as the portion of the projects that have recently been completed but not yet included in IEUA's fixed asset schedule. Attached to this appendix, following the Agency's CIP, is a list project by project allocations of costs to future and existing customers.

Table 1 Name of Table - Auto Numbering is on for Tables

$M	Growth	Existing	Total
Recharge Program	$0.1	$0.4	$0.5

Water System Allocation of Costs to Growth

$	89,059,698

Water Projects; Costs Allocated to Growth (TM Table 4.5)

Fund	Total Water Project Costs	Total Costs Allocated to Growth	Total Costs Allocated to Existing Customers
WW	$53,722,882	$7,702,718	$46,020,164
WC	151,419,235	80,929,079	$70,490,156
RW	2,381,000	153,416	$2,227,584
GG	1,486,790	274,485	$1,212,305
Total	$209,009,907	$89,059,698	$119,950,208

General Notes:

The total of the growth related costs ($89,059,698) is the portion of the total CIP that is allocated to the connection fee.

5% of the GG Fund projects costs are allocated to the water connection fee. This represents the approximate share of all Agency assets that are related to the water system.

The TBD-Drought projects are projects submitted by the member agencies. The listed amount is 5% of the total cost submitted by the agencies.

Notes:

(1) Project partially funded by the Chino Basin Water Master. Total Budget represents the portion of the project funded by IEUA.

(2) The specific list of Conservation Programing projects is attached.

"DRAFT"

WATER USE EFFICIENCY PROGRAMMATIC LIST

Program Evaluation Against Criteria

Program / Measure	Avg Annual AF Water Savings	Lifetime AF Savings	Annual Production	Years Implemented	External Funding	IEUA Funding	Cost per Acre-Foot_IEUA Only	Cost Benefit Ratio_IEUA Only	Cost per AF_All Funding Agencies	Cost Benefit Ratio_All Funding Agencies	Scalability	Assumptions
Water Budget Rate Structure	2,492	49,844	50,469	5	$41.61	$17.83	$24	52.36	$80.00	15.71	High	Could be implemented at all agencies. Agency and customer acceptance are significant barriers. Assumptions are based on 25% of regional water accounts converted, or the equivalent of two agencies beginning in year 3 (2015-2020). Water savings assumptions are based on a reduction of 5% per year for 3-5 years with an average lifetime savings of 20 years. This is a conservative estimate with water savings potential as high as 7%-8% per year. Cost assumptions are based on $1.5M per agency to implement with a $5 per account maintenance fee thereafter.
Home Water Use Reports	1,542	6,168	97,600	4	$0.00	$2.00	$127	6.44	$127.00	6.44	Low - Above Current Modeling	Assumptions are based on 50% of regional water accounts utilizing this program at $2 per account per year. Programming is assumed to begin in year 2 (2015-2020). Water Savings assumptions are based on 2% per year with an average lifetime savings over 4 years.
High Efficiency Sprinkler Nozzles SCWS Rebate (SF)	12	110	1,000	5	$4.00	$0.00	$0	NA	$193.00	4.53	Medium	There are millions of nozzles in the IEUA territory. To move, rebate money would need to be added to rebate and additional marketing.
FreeSprinklerNozzles.com Voucher (All Classes)	733	6,600	20,000	5	$4.00	$0.75	$36	24.18	$230.00	3.82	Medium	There are millions of nozzles in the IEUA territory. To move, rebate money would need to be added to rebate and additional marketing.
High Efficiency Sprinkler Nozzles SCWS Rebate (CII)	122	1,100	10,000	5	$4.00	$1.00	$48	18.13	$242.00	3.63	Medium	There are millions of nozzles in the IEUA territory. To move, rebate money would need to be added to rebate and additional marketing.
Cooling Tower Conductivity Controllers SCWS Rebate	18	161	10	5	$625.00	$375.00	$124	7.08	$330.00	2.65	Low	Limited participation.
Premium High Efficiency Toilets SCWS Rebate (MF 1.0 gpf or less)	234	5,610	1,500	5	$145.00	$55.00	$97	12.85	$354.00	3.53	Medium	Rebate is offered for replacement of ULFTs. Market is large but rebate format will not produce large numbers.
Smart Controllers SCWS Rebate (SF)	7	104	50	5	$70.00	$80.00	$221	4.46	$415.00	2.38	Low	Limited opportunity for water savings through single family controllers offered in rebate format.
CBWCD Landscape Evaluation Program	20	119	150	5	$66.00	$200.00	$1,710	0.48	$424.00	1.92	Low	Savings are not long term. Can be used as leader into other programs.
Smart Controllers SCWS Rebate $50 per Station	2	32	50	5	$35.00	$15.00	$133	7.41	$444.00	2.22	Low	Limited participation.
High Efficiency Toilets SCWS Rebate (SF)	50	1,107	750	3	$100.00	$50.00	$185	6.03	$555.00	2.01	Low	High efficiency tiolets are required by law. Current program has high freeridership.
High Efficiency Toilets SCWS Rebate (CII 1.28 gpf)	20	443	300	3	$100.00	$50.00	$185	6.03	$555.00	2.01	Low	High efficiency tiolets are required by law. Current program has high freeridership.
High Efficiency Toilets SCWS Rebate (MF 1.28 gpf)	20	443	300	3	$100.00	$50.00	$185	6.03	$555.00	2.01	Low	High efficiency tiolets are required by law. Current program has high freeridership.
IEUA Multi-Family Premium Toilet Direct Install Prog.	264	5,610	1,500	5	$145.00	$105.00	$237	5.04	$564.00	2.12	High	Program is replacing ULFTs so all mulit family toilets are eligible.
IEUA Premium Efficiency Direct Install (SF)	468	11,200	3,000	5	$145.00	$155.00	$334	3.60	$647.00	1.86	High	Program is replacing ULFTs so all single family toilets are eligible.
High Efficiency Clothes Washers SCWS Rebate (SF)	62	863	500	5	$85.00	$65.00	$303	3.15	$699.00	1.37	Medium	Market is not saturated but units being sold are mostly efficient. Program has many freeriders.
HE Sprinkler Nozzle Direct Installation Program (All classes)	147	1,479	10,000	5	$4.00	$6.00	$426	2.02	$709.00	1.21	High	There are millions of nozzles in the IEUA territory. Amount could be used to pay contractors directly as well.
Residential Landscape Retrofit Program	93	1,027	300	3	$1,500.00	$0.00	$0	NA	$1,286.00	0.71	Medium	Could install in smaller sites but not all controllers save water.
Air-Cooled Ice Machine SCWS Rebate	-	2	0	5	$1,000.00	$1,000.00	$744	1.33	$1,489.00	0.66	Low	Limited number of ice machines. Need to influence upstream.
Turf Removal $2.00 (CII)	232	3,250	500,000	5	$2.00	$0.00	$0	NA	$1,763.00	0.56	High	There are millions of square feet of turf in IEUA's territory. Not cost effective. Assumption is MWD will continue to pay $2.00.
Turf Removal $2.00 (SF)	46	650	100,000	5	$2.00	$0.50	$441	2.24	$2,204.00	0.45	High	There are millions of square feet of turf in IEUA's territory. Not cost effective. Assumption is MWD will continue to pay $2.00.
Rain Barrels SCWS Rebate (SF)	-	-	50	5	$75.00	$0.00	$0	NA	$8,376.00	0.10	Low	Savings are minimal.

*Please note that pilot projects such as: drip irrigation, home pressure regulation, and education are not included on this list. This list is a condensed version of all regional programming activities.

APPENDIX C – MEU CALCULATION

1.0 INTRODUCTION

The purpose of this appendix is to use existing account data provided by the Inland Empire Utilities Agency (IEUA) to calculate the total number of MEUs in the water system. This total will subsequently be used to calculate the MEU consumption assumption and future customer base.

2.0 METER EQUIVALENT UNITS

2.1 Potable MEUs

Based on the total number of accounts by meter size reported by each member agency, Table 1 presents the calculation of the total number of MEUs consuming potable water in the Agency's water service area.

Table 1 Member Agency FY 2013/14 Potable Accounts and MEUs

Meter Size	Chino	Chino Hills	CVWD	FWC	MVWD	Ontario	SAWCO	Upland	WECWC	MEUs/ Accnt	Total MEUs
5/8"	13,513	4,300	16	22,528	1	27,021	0	16,105	0	1	83,484
3/4"	2,237	12,150	29,955	54	8,376	20	0	53	0	1	52,845
1"	1,475	3,692	14,061	16,286	2,494	2,509	0	1,723	0	2.5	105,600
1.5"	707	447	1,179	651	318	1,356	0	519	0	5	25,887
2"	943	576	2,095	1,331	358	2,136	0	716	0	8	65,242
3"	123	29	166	52	34	190	0	22	0	17.5	10,772
4"	41	46	78	7	18	104	0	28	0	31.5	10,154
6"	20	33	21	23	4	64	0	2	0	70	11,690
8"	8	107	58	12	3	60	0	0	0	120	29,755
10"	2	9	9	17	1	3	0	0	0	150	6,222
12"	0	0	1	0	0	0	0	0	0	175	175
Total Potable Water MEUs											**401,826**

2.2 Recycled MEUs

Due to an increased emphasis on the substitution of potable water use for recycled water use as a result of conservation efforts, the per capita recycled water consumption has trended upwards since the last time the Agency calculated single-family residential water consumption and wastewater flow. The Agency provided recycled water account data. While all accounts listed annual recycled water consumption, most accounts did not list a meter size. As a result, meter size assumptions were calculated based on the average consumption per known meter size. The accounts with unknown meter sizes were grouped

according to these assumptions. Table 2 presents these assumptions and the range in consumption of each group.

Table 2 Meter Size Assignment Groupings			
Meter Size	**Average AFY**	**Min AFY**	**Max AFY**
1"	1.5	0.0	1.9
1.5"	6.1	1.9	7.1
2"	9.8	7.1	12.2
3"	15.0	12.2	17.5
4"	34.6	17.5	43.3
6"	279.8	43.3	326.5
8"	56.6	326.5	500.0(1)
10"	435.3	500.0(1)	N/A

Notes:

(1) Based on an assigned value instead of the average consumption per known meter size due to insufficient sample sizes in 8" and 10" meter data.

The AFY consumption ranges calculated above were used to assign meter sizes to accounts with unrecorded meter sizes. Table 3 presents the known and assigned accounts within each range of meter size grouping.

Table 3 Member Agency FY 2013/14 Recycled Accounts and MEUs											
Meter Size	**Chino**	**Chino Hills**	**CVWD**	**FWC**	**MVWD**	**Ontario**	**Upland**	**SBC**	**IEUA**	**MEUs/ Accnt**	**Total MEUs**
1"	44	12	37	0	1	49	0	0	3	2.5	146
1.5"	95	55	33	1	2	88	0	0	0	5	274
2"	44	63	12	2	16	40	25	0	0	8	202
3"	12	7	8	0	2	17	2	0	1	17.5	49

8"	3	1	0	0	0	3	0	0	0	120	7
10"	5	1	1	0	0	3	0	2	1	150	13
Total Recycled Water MEUs											**12,704**

2.3 Total MEUs

The total number of water consuming MEUs is the sum of the potable and recycled water MEUs, 414,529.
