

IMPROVE YOUR SOILS WITH **PREMIUM COMPOST**

SoilPro Products™ Premium Compost is excellent for use as a topdressing or seed cover.

SoilPro Products™ Premium Composts are excellent for amending depleted soils, enriching planting mixes, and enhancing the growth of turf and ornamental plant species.

SOILRO™ Premium Compost Products Benefits

- Finely screened compost (<3/8")
- Rich in organic matter – improving soil structure and feeding soil microbes
- Supplies nitrogen and iron for turf and plant foliage color (greening)
- Improves water infiltration and retention
- Improves soil aggregation – for deeper rooting
- Weed free

The Inland Empire Regional Composting Authority (IERCA) manufactures **SoilPro Premium Compost Products** at its state-of-the-art composting facility. At this 'high tech' facility, modern engineering principles are used to accelerate the natural degradation process – enabling a consistent "finished" product to be produced in under 3 months. The 'in-vessel' composting process, essentially "pasteurizes" the product, allowing **SoilPro Products™** Composts to boast that they are free of viable weed seeds and plant pathogens. Ongoing monitoring of the system allows for a consistently high quality soil amendments to be produced. **SoilPro Products™** Composts are rich in organic matter and nutrients, both of which are essential components to healthy and productive soils.

SoilPro Products - Premium Compost

- Corrects damaged soils
- Can be used in ornamental and agricultural applications
- Feeds the soil and your plants all in one step

SoilPro Products Compost Applications & Use Directions

Turf Topdressing

- Apply approximately ¼ - ½ " over turf
- Core-aerate before application whenever possible
- Rake area to assure even application
- Over seed if desired and water
- Apply approximately 1 cubic yard per 1000ft²

General Soil Amending/Planting Bed Preparation

- Incorporate 1-2" into 6-12" of soil
- Apply no pre-plant fertilization
- Plant and water

General Soil Amending/Turf Establishment

- Incorporate 1-2" into 6-12" of soil
- Seed/Sod and water
- Only apply pre-plant fertilization, if soil testing requires

Nursery Media

- Blend with various ingredients, including 10-20% (by volume) in mix blend
- Reduces or eliminates initial fertilization

Test native soil to determine best application rates and fertilizer requirements.

Guaranteed Minimum Nutrient Analysis

Total Nitrogen	2.42%
Mineralized Nitrogen (immediately Available)	0.40%
Organic Nitrogen (slow release)	4.81%
Total Phosphorus (as P ₂ O ₅)	2.02%
Total Potassium (as K ₂ O)	0.77%
Organic Matter	66.10%
Total Iron	4.84%

Ingredient List:

Composted biosolids, forestry products, yard trimmings and stable bedding.
